

## Departmental Maths Lit Exam Paper June 2013

Firmly rooted in research evidence of what works within the classroom for our most disadvantaged students, Disciplinary Literacy and Explicit Vocabulary Teaching offers teachers and school leaders practical ways in which those students who are behind in their literacy capabilities can make excellent progress. Building on the work of Geoff Barton in his influential book Don't Call it Literacy, Kathrine Mortimore outlines the unique literacy challenges posed by specific subject areas for those with weaker literacy skills, and more importantly how these challenges can be addressed and overcome. A student's GCSE results are vital in giving them the choices they deserve in order to go on to the next stage of their academic careers. This book draws on the success stories of schools and subjects that have made significant improvements in the outcomes of the children they teach, regardless of their starting points. From the inevitable success of Michaela Community school, to the gains made by the English department at Torquay Academy and the rapid reading improvements at Henley Bank, this book draws on both whole school initiatives and subject-specific strategies which have had proven success. This book places a wide and balanced knowledge-rich curriculum at the centre of any school improvement strategy designed to improve literacy, and illustrates the role that all subjects must combine to play in building the vital background knowledge and vocabulary that young people need in order to read independently. This curriculum must then be delivered using those teaching methods that have had the greatest impact on disadvantaged learners, and this book sets out how the methodology of direct and explicit instruction can be adopted within each subject area. Alongside this is a useful summary of staff development and inset which offers practical ways in which teachers' adoption of these effective strategies can be facilitated. There are also useful sections on creating a whole school dictionary of essential vocabulary, creating a culture of reading and writing, and also those key literacy barriers experienced by those students with some of the most common special educational needs.

*The most important papers of Tony Hilton Royle Skyrme are collected in this volume which also includes commentaries by G Brown and other articles relating to the life and work of Tony Skyrme, R Dalitz, E Witten and others. Skyrme's work was brilliant, profound and surprisingly useful. He provided an original solution to the problem of constructing fermions from bosons, formulating the topological soliton model of the nucleon. His two-parameter model of effective interactions in nuclei has yielded a remarkably accurate description of nuclear structure. His  $\alpha$ -particle model of nuclei gave deep insights into the structure of important and complicated excited states. This volume is a unique collection of Tony Skyrme's work. It is a must for all physicists in the high energy, nuclear and mathematical physics community. Contents: The Alpha-Particle and Shell Models of the Nucleus The Skyrme Interaction Skyrmsions The Rediscovery of Skyrmsions Readership: Nuclear, high energy and mathematical physicists.* keywords:

Classroom teachers are increasingly expected to teach online - creating content area courses from scratch with little support or training. But high-quality, researched-based online teaching has its own particular set of skills and expectations, and most resources are directed at college-level instructors. This no-nonsense handbook is for that busy classroom teacher, with clear techniques for planning, instruction, and assessment, as well as sections on teaching students with diverse needs and exceptionalities. Based on the author's real-life experiences as an online teacher, there are multiple examples including sample assignments across content areas, rubrics for grading, and sample scripts for parent contact as well as tips to reduce instructor workload and conduct successful live instruction.

*This book provides a collection of chapters from prominent mathematics educators in which they each discuss vital issues in mathematics education and what they see as viable directions research in mathematics education could take to address these issues. All of these issues are related to learning and teaching mathematics. The book consists of nine chapters, seven from each of seven scholars who participated in an invited lecture series (Scholars in Mathematics Education) at Brigham Young University, and two chapters from two other scholars who are writing reaction papers that look across the first seven chapters. The recommendations take the form of broad, overarching principles and ideas that cut across the field. In this sense, this book differs from classical "research agenda projects," which seek to outline specific research questions that the field should address around a central topic.*
