This critical and empirically based volume examines the multiple existing Nordic models, providing analytically innovative attention to the multitude of circulating ideas, images and experiences referred to as "Nordic". It addresses related paradoxes as well as patterns of circulation, claims about the exceptionality of Nordic models, and the diffusion and impact of Nordic experiences and ideas. Providing original case

studies, the book further examines how the Nordic models have been constructed, transformed and circulated in time and in space. It investigates the actors and channels that have been involved in circulating models: journalists and media, bureaucrats and policy-makers, international organizations, national politicians and institutions, scholars, public diplomats and analyses where and why models have travelled. Finally, the book shows that Nordic models, perspectives, or ideas do

not always originate in the Nordic region, nor do they always develop as deliberate efforts to promote Nordic interests. This book will be of key interest to Nordic and Scandinavian studies, European studies, and more broadly to history, sociology, political science, marketing, social policy, organizational theory and public management. how disability and architecture might be connected. Rather than putting disability at the end of the design process, centred mainly on compliance, it sees disability – and ability – as creative starting points for the whole design process. It asks the intriguing question: can working from dis/ability actually generate an alternative kind of architectural avant-garde? To do this, *Doing Disability Differently*: explores how thinking about dis/ability opens up to critical and creative investigation our everyday social attitudes and practices about people, objects and space argues that design can help resist and transform underlying and unnoticed inequalities introduces architects to

the emerging and important field of disability studies and considers what different kinds of design thinking and doing this can enable asks how designing for everyday life – in all its diversity – can be better embedded within contemporary architecture as a discipline offers examples of what doing disability differently can mean for architectural theory, education and professional practice aims to embed into architectural practice, attitudes and approaches that creatively and constructively refuse to perpetuate body 'norms' or the resulting inequalities in access to, and support from, built space. Ultimately, this book suggests that re-addressing architecture and

A newly updated and comprehensive guide to all aspects of visual design From doing a quick sketch to producing a fully rendered model, the ability to create visual representations of designs is a critical skill for every designer. Interior Design Visual Presentation, Fifth Edition offers thorough coverage of interior design communication used throughout the design process, complete with a broad range of real-world examples. This fully updated handbook presents a full range of styles and techniques used for interior design visual communication, from hand drawing to 3D computer modeling. Its accessible, how-to approach guides you through a variety of methods for executing creative and successful design graphics, models, and presentations. Recognizing the ongoing proliferation of

This book explains the basic sketching techniques and decisions more in depth and provides much more step-by-step example drawings, which makes it even more suitable for students and professionals who want to become better sketchers. Sketching the Basics can be seen as the prequel to Sketching as it is more targeted at the novice designer. The Basics explains the essential techniques and effects more in detail, taking the reader by the hand and guiding him step by step through all the various aspects of drawing that novice designers come up against. Internationally leading Designers from various cultures around the world contributed Designer Showcases to illustrate the sketching theory. They contributed series of sketches that reflect the process of the design, from thumbnail to final drawing. Drawings that have proven to be important in the decision-making The authors believe in active observation and participation by the student. Architects who engaged with cybernetics, artificial intelligence, and other technologies poured the foundation for digital interactivity. In Architectural Intelligence, Molly Wright Steenson explores the work of four architects in the 1960s and 1970s who incorporated elements of interactivity into their work. Christopher Alexander, Richard Saul Wurman, Cedric Price, and Nicholas Negroponte and the MIT Architecture Machine Group all incorporated technologies—including cybernetics and artificial intelligence—into their work and influenced digital design practices from the late 1980s to the present day. Alexander, long before his famous 1977 book A Pattern Language, used computation and structure to visualize design problems; Wurman popularized

the notion of “information architecture”; Price designed some of the first intelligent buildings; and Negroponte experimented with the ways people experience artificial intelligence, even at architectural scale. Steenson investigates how these architects pushed the boundaries of architecture—and how their technological experiments pushed the boundaries of technology. What did computational, cybernetic, and artificial intelligence researchers have to gain by engaging with architects and architectural problems? And what was this new space that emerged within these collaborations? At times, Steenson writes, the architects in this book characterized themselves as anti-architects and their work as anti-architecture. The projects Steenson examines mostly did not result in constructed buildings, but rather in design processes and tools, computer

programs, interfaces, digital environments. Alexander, Wurman, Price, and Negroponte laid the foundation for many of our contemporary interactive practices, from information architecture to interaction design, from machine learning to smart cities.

As king Francois Ier once said: "Paris is not a city, it's a world." Long after the swarming crowd has deserted it, at dusk or dawn, after the hum and buzz of traffic has subsided, Paris still resonates with a life of its own: muted, subdued, and mysterious. That's precisely the moment photographer Jean-Michel Berts has elected to capture it, in black and white. From Opera to Montmartre, along the banks of the Seine or its Grands Boulevards, stepping in the footprints of Baudelaire, Brassai, Huysmans, framed by Berts's camera obscura, the buildings, completely deserted streets, and even its trees and empty flights of stairs take on a poetic, ethereal, almost dream-like quality. Much more than a hymn to the City of Lights

and featuring a beautiful text by Pierre Assouline, this book is a moving homage to Paris, seen as a virtuoso sculptor's masterpiece. Each of the prints are given ample breathing space in this volume, whose opulent trim size befits the spectacular quality of the shots. Jean-Michel Berts photographs can be seen on: www.parisjeanmichelberts.com/parisjean-michelberts-paris.html.

A must have for product design students! Are designers still making drawings by hand? Isn't it more advanced to use a computer in this computer era? Some may think sketching is a disappearing skill, but if you ever enter a design studio, you will find out differently. Studios still make sketches and drawings by hand and in most cases, quite a lot of them. They are an integral part of the decision-making process, used in the early stages of design, in brainstorming sessions, in the phase of

research and concept exploration, and in presentation. Drawing has proved to be, next to verbal explanation, a powerful tool for communicating not only with fellow designers, engineers or model makers but also with clients, contractors and public offices. This book can be regarded as a standard book on design sketching, useful for students in product design.

Offers critical analyses of one hundred innovative products to examine their design and assess patterns of success or failure.
