Johannes Kepler (1571-1630) and Gerard Desargues (1591-1661)

independently developed the pivotal concept of the "point at infinity."

Desargues developed

an alternative way of constructing perspective drawings by generalizing the use of vanishing points to include the case when these are infinitely far away. He made Euclidean geometry, where parallel lines are truly parallel, into a special case of an all-

Desargues's study on

The work of Desargues was ignored until Michel Chasles chanced upon a handwritten copy in 1845.
