Electronic Inspection Copy available here Revisiting the Classic Studies is a series of texts that introduces readers to the studies in psychology that changed the way we think about core topics in the discipline today. It provokes students to ask more interesting and challenging questions about the field by encouraging a deeper level of engagement both with the details of the studies themselves and with the nature of their contribution. Edited by leading scholars in their field and written by researchers at the cutting edge of these developments, the chapters in each text provide details of the original works and their theoretical and empirical impact, and then discuss the ways in which thinking and research has advanced in the years since the studies were conducted. Revisiting the Classic Studies in Developmental Psychology traces 14 ground-breaking studies by researchers such as Harlow, Meltzoff & Moore, Kohlberg and Bandura to re-examine and reflect on their findings and engage in a lively discussion of the subsequent work that they have inspired. Suitable for students on developmental psychology courses at all levels, as well as anyone with an enquiring mind

For every chapter, the Study Guide will include a "Preview" and "At A Glance" sections (both provide an overview of and objectives for the chapter). Each major topic includes a progress test, comprised of multiple-choice, matching, and/or true/false questions. The Guide also contains "Graphic Organizers," which encourage students to complete graphs, charts, and flow diagrams that ultimately provide a visual synopsis of text material. End-of-chapter material includes "Something To Think About" sections, which contain thought provoking questions designed to encourage critical thinking and application of the material.

The importance of high quality early childhood education is now universally recognised, and this quality crucially depends upon the practitioners who work with our young children, and their deep understanding of how children develop and learn. This book makes a vital contribution to this understanding, providing authoritative reviews of key areas of research in developmental psychology, and demonstrating how these can inform practice in early years educational settings. The book's major theme is the fundamental importance of young children developing as independent, self-regulating learners. It illustrates how good practice is based on four key principles which support and encourage this central aspect of development: - secure attachment and emotional warmth - feelings of control and agency - cognitive challenge, adults supporting learning and children learning from one another - articulation about learning, and opportunities for self-expression. Each chapter includes: - typical and significant questions which arise in practice related to that area of development - an up-to-date review of key research, including insights from observational and experimental work with young children, from evolutionary psychology, and from neuroscientific studies of the developing brain - practical exercises intended to deepen understanding and to inform practice - questions for discussion - recommended further reading. This book provides an invaluable resource for early years students and practitioners, by summarizing new research findings and demonstrating how they can be translated into excellent early years practice. Watch this video of David Whitebread at his book launch, presenting the key points of the book and his reasons for writing it. David Whitebread is Senior Lecturer in Developmental Psychology and Early Years Education in the Faculty of Education, University of Cambridge.
