As the HVACR industry continues to move forward and innovate, the refrigerants that were once so commonplace are now being phased out. Replacing them are more energy efficient, environmentally friendlier refrigerants, known as Low GWP refrigerants. Many of these new refrigerants are classified by ASHRAE as A2L, or slightly flammable. The industry is also seeing expanded use of some hydrocarbon (A3) refrigerants, such as propane and isobutane. Students and technicians will require additional training for the safe handling and transportation of these refrigerants. The Low GWP refrigerant program manual covers: Refrigerant safety Introduction to Low GWP refrigerants Refrigerant properties and characteristics The refrigeration cycle Working with refrigerant blends Proper installation and service guidelines Flammable refrigerant considerations Explanation of the associated codes and

standards for A2L refrigerants

This affordable, real-world guide to success in construction estimating is loaded with tips, checklists, worksheets, data tables, and step-by-step tutorials to help you navigate every step of the estimating process. The text focuses on "how-to" essentials, with on-the-spot answers, visual examples and a strong focus on key factors affecting profit, such as marketing, bid planning, drawing review, scope planning, quantity take-off, pricing, quote evaluation, cost summary, and bid closing for all trades and divisions. Drawing on extensive experience in the industry, the author provides practical solutions for the unprecedented challenges that construction professionals face today, including fierce competition, material price volatility, skilled labor shortages, and strict regulations. He also illuminates the relationship between estimating and project management, with coverage of overhead expenses, value engineering, turnover meeting, and change order pricing.
