In that The Anatomy of Speech Notions (1976) was the precursor to The Grammar of Discourse (1983), this revision embodies a third "edition" of some of the material that is found here. The original intent of the 1976 volume was to construct a hierarchical arrangement of notional categories, which find surface realization in the grammatical constructions of the various languages of the world. The idea was to

marshal the categories that every analyst—regardless of theoretical bent—had to take account of as cognitive entities. The volume began with a couple of chapters on what was then popularly known as "case grammar," then expanded upward and downward to include other notional categories on other levels. Chapters on discourse, monologue, and dialogue were buried in the center of the volume. In the 1983 volume the chapters on monologue and dialogue discourse were moved to the fore of the book and the chapters on case grammar were made less prominent; the volume was then renamed *The Grammar of Discourse*. This book describes the most important kinds of texts in English and introduces the methodological techniques used to analyse them. Three analytical approaches are introduced and compared, describing a wide range of texts from the perspectives of register, genre and style. The primary focus of the book is on the analysis of registers. Part 1 introduces an analytical framework for studying registers, genre conventions, and styles. Part 2 provides detailed descriptions of particular text varieties in English, including spoken interpersonal varieties (conversation, university office hours,

The editor's broad definition of the field ensures that the book may be read by those seeking a comprehensive introduction to the subject, but with little or no prior knowledge of the area. Building on the popular first edition, *The Handbook of Linguistics, Second Edition* features new and revised content reflecting advances within the discipline. New chapters expand the already broad coverage of the Handbook to address and take account of key changes within the field in the intervening years. It explores:

considers a) the research question (Is it clear and focused? Measurable?), b) the subjects examined, the methods deployed, and the measures chosen (Do they fit the study's goal and have the potential to yield useful results?), and c) the analysis of the data (Do the data lead to the discussion presented? Has the author reasonably interpreted results to reach the conclusion?). Director, Academic Language Research & Training, Past President, TESOL International Association (2021-22) As a teacher in graduate programs in TESOL I frequently come across the frustration of students at centering their research interests on a particular topic and developing research questions which are worth pursuing so as to make a contribution to the field. This frustration stems from the fact that our field is so vast and interrelated, that it is often impossible to properly address all that

interests them. Hence, I wholeheartedly welcome this most relevant and innovative addition to the research literature in the field of TESOL and Applied Linguistics. Coombe and Mohebbi have created a real tour de force that stands to inform budding researchers in the field for many years to come. Additionally, the cutting-edge depiction of the field and all it has to offer will no doubt update the research agendas of many seasoned researchers around the world. What is more, the nine sections in which the chapters are organized leave no area of the field unexplored. In this examination of expository prose in contemporary Arabic, structural and semantic repetition is found to be responsible both for linguistic cohesion and for rhetorical force. Johnstone identifies and discusses repetitive features on every level of analysis. Writers in Arabic use lexical couplets consisting of conjoined synonyms, which create new semantic paradigms as they evoke old ones. Morphological

roots and patterns are repeated at close range, and this creates phonological rhyme as well. Regular patterns of paraphrase punctuate texts, and patterns of parallelism mark the internal structure of their segments. Johnstone offers an explanation for how repetition of all these kinds can serve persuasive ends by creating rhetorical presence, and discusses how the Arabic language and the Arab-Islamic cultural tradition especially lend themselves to this rhetorical strategy. She suggests, however, that discourse repetition serves a crucial function in the ecology of any language, as the mechanism by which speakers evoke and create underlying paradigmatic structure in their syntagmatic talk and writing.
