In this fresh new offering to the Intro Psychology course, authors John Cacioppo and Laura Freberg portray psychology as being an integrative science in two ways. First, they have written a text that reflects psychology's rightful place as a hub science that draws from and is cited by research in many other fields. Second, this text presents psychology as a unified science that seeks a complete understanding of the human mind, rather than as a loosely organized set of autonomous subspecialties. As psychology moves rapidly toward maturity as an integrative, multidisciplinary field, the introductory course offers an opportunity to teach all of psychology in one place and at one time. This text reflects that evolution--and the authors' excitement about it. The authors are proud sponsors of the 2020 SAGE Keith Roberts Teaching Innovations Award—enabling graduate students and early career faculty to attend the annual ASA pre-conference teaching and learning workshop. What key social forces construct and transform our lives as individuals and as members of society? How does our social world shape us? How do we shape our world? Discover Sociology presents sociology as a discipline of curious minds. The authors inspire curiosity about the social world and empower students by providing the theoretical, conceptual, and empirical tools they need to understand, analyze, and even change the world in which they live. Organized around four main themes—The Sociological Imagination, Power and Inequality, Technological Transformations of Society, and Globalization—the book illuminates the social roots of diverse phenomena and institutions, ranging from poverty and deviance to capitalism and the nuclear family. "Behind the Numbers" features illustrate the practical side of sociology and shows students how to be critical consumers of social science data reported in the media. And every chapter addresses the question, "What can I do with a sociology degree?" by linking the knowledge and skills acquired through studying sociology with specific jobs and career paths. The enhanced 4th Edition of Goodwin's series, A History of Modern Psychology, explores the modern history of psychology including the fundamental bases of psychology and psychology's advancements in the 20th century. Goodwin, Ph.D. in experimental psychology, has a true passion for the history of experimental psychology. Strengths of the text include his conversational writing style and attention to recent scholarship in the history of psychology. Goodwin's 4th Edition focuses on the reduction of biographical information with an emphasis on more substantial information including ideas and concepts and on ideas/research contributions; more history on the applied areas of psychology; condensed chapters, philosophical antecedents and physiological antecedents; and more psychology's history in the 20th century.

To help users understand the value and usefulness of psychology in their daily lives, Nairne presents PSYCHOLOGY FOR A REASON. Rather than focusing exclusively on the content of psychology--the "what"--Nairne infuses each chapter with the "why,"--explaining how our thoughts and actions help us solve the problems we encounter every day. This unique approach allows students to understand the function and purpose of psychology and its topics first--psychology is no longer presented as a mixture of abstract topics that need to be memorized. This approach promotes critical thinking; as students progress through each chapter, they become engaged as they see the connection between problems and their psychological solutions. They also begin to relate the material to what they already know from their own lives. This theme extends across chapters, offering readers a consistent and effective learning framework.
