"Words are our tools, and, as a minimum, we should use clean tools. We should know what we mean and what we do not, and we must forearm ourselves against the traps that language sets us." -- The Need for Precise Terminology, Austin (1957, 7-8) It follows that, for effective and efficient communication, people should have, or at least understand, the same precise terminology. terms, and focuses on nouns, rather than verbs or adjectives. Term hierarchies are handled with bulleted entries and terms with multiple definitions are included as superscripted entries. All sources are cited and most are paraphrased to conform to uniform style and length. The dictionary also includes nontechnical and obsolete terms, synonyms, pronunciations, and notes and comments, as well as etymologies, term originators, and related facts. Appendices address organism names, organizations, and databases. Devoted to the precise and correct use of scientific language, this third edition of a bestselling standard enables students and scientists alike to

An Introduction

Exploring the Landscape of the
Mind

Citation Classics from Social
Indicators Research

This book is based on the premise that humankind is, first and foremost, the outcome of the process of biological evolution. Recognition of this is fundamental to our understanding of who we are and how we behave. All living things have evolved the physical and mental attributes that promote their prospects for survival; they are good at doing the things that enable them to pass on their genes to succeeding generations, and we are no exception. Of course, through the development of culture, we have gained some freedom from our biological origins. Nevertheless, evolution has

constructed the foundation upon which culture is built. The first part of the book, *Ourselves Interacting with the World*, presents an overview of the main capabilities that evolution has endowed us with and that enable us to interact with the environment in advantageous ways. This includes our senses, which act as windows on the world and also, of great importance, our emotions and ability to remember. Our ability to think is perhaps the crowning achievement of our evolutionary journey, and, of course, we must be able to act in a timely and effective manner. The second part of the book, *Living Together*,

traces the history of how we became social creatures. To be truly human, we had to be capable of sharing and cooperation. We also needed to be able to control our aggressiveness and talent for deception. We settled down, making the transition from hunter-gatherers to urban dwellers, and agreed upon values and norms of behavior that enhanced our ability to get along. Ultimately, we came to see good and bad as a morality of right and wrong, further augmenting group cohesiveness. In the final part of the book, Challenges and Opportunities, attention turns to a consideration of the constraints and possibilities

that must be considered in looking to the future. These realities can be seen to play out in four social arenas: the pursuit of fairness, the seeking of justice, the interplay of political beliefs and good government, and ultimately, a united society that is, at the same time, a true community. Our quest for these things will be greatly aided by a deep knowledge and appreciation of our evolutionary past and the indelible imprint it has left upon us. It may even lead us to that most elusive of all things, happiness.

This is a solid foundational undergraduate text written from a fresh and innovative perspective. The text is divided into ten sections covering various key theoretical areas in psychology. There are 41 chapters written by contributors representing

universities across South Africa and in the United States and UK. A golden thread narrative is written by psychologist, Kerry Gibson, at the beginning of each chapter, linking the concepts explained to the southern African scenario.

In this fresh new offering to the Intro Psychology course, authors John Cacioppo and Laura Freberg portray psychology as being an integrative science in two ways. First, they have written a text that reflects psychology's rightful place as a hub science that draws from and is cited by research in many other fields. Second, this text presents

Online Library Discovering Psychology 6th Edition Citation

psychology as a unified science that seeks a complete understanding of the human mind, rather than as a loosely organized set of autonomous subspecialties. As psychology moves rapidly toward maturity as an integrative, multidisciplinary field, the introductory course offers an opportunity to teach all of psychology in one place and at one time. This text reflects that evolution--and the authors' excitement about it. A deep dive into the spectrum of Autistic experience and the phenomenon of masked Autism, giving individuals the tools to safely uncover their true selves while broadening society's narrow understanding of neurodiversity "A remarkable work that will stand at the forefront of the

neurodiversity movement.”—Barry M. Prizant, PhD, CCC-SLP, author of *Uniquely Human: A Different Way of Seeing Autism* For every visibly Autistic person you meet, there are countless “masked” Autistic people who pass as neurotypical. Masking is a common coping mechanism in which Autistic people hide their identifiably Autistic traits in order to fit in with societal norms, adopting a superficial personality at the expense of their mental health. This can include suppressing harmless stims, papering over communication challenges by presenting as

Online Library Discovering Psychology 6th Edition Citation

unassuming and mild-mannered, and forcing themselves into situations that cause severe anxiety, all so they aren't seen as needy or "odd." In *Unmasking Autism*, Dr. Devon Price shares his personal experience with masking and blends history, social science research, prescriptions, and personal profiles to tell a story of neurodivergence that has thus far been dominated by those on the outside looking in. For Dr. Price and many others, Autism is a deep source of uniqueness and beauty. Unfortunately, living in a neurotypical world means it can also be a

Online Library Discovering Psychology 6th Edition Citation

source of incredible alienation and pain. Most masked Autistic individuals struggle for decades before discovering who they truly are. They are also more likely to be marginalized in terms of race, gender, sexual orientation, class, and other factors, which contributes to their suffering and invisibility. Dr. Price lays the groundwork for unmasking and offers exercises that encourage self-expression, including:

- Celebrating special interests
- Cultivating Autistic relationships
- Reframing Autistic stereotypes
- And rediscovering your values

Online Library Discovering Psychology 6th Edition Citation

It's time to honor the needs, diversity, and unique strengths of Autistic people so that they no longer have to mask—and it's time for greater public acceptance and accommodation of difference. In embracing neurodiversity, we can all reap the rewards of nonconformity and learn to live authentically, Autistic and neurotypical people alike.

Psychology

For the last 100 years historians have denigrated the psychology of the Critique of Pure Reason. In opposition, Patricia Kitcher argues that we can only understand the deduction of the categories in terms of Kant's attempt to fathom the psychological prerequisites of thought, and that this investigation illuminates thinking itself. Kant tried to understand the "task environment" of knowledge and thought: Given the data we acquire and the scientific generalizations we make, what basic cognitive capacities are

Online Library Discovering Psychology 6th Edition Citation

necessary to perform these feats? What do these capacities imply about the inevitable structure of our knowledge? Kitcher specifically considers Kant's claims about the unity of the thinking self; the spatial forms of human perceptions; the relations among mental states necessary for them to have content; the relations between perceptions and judgment; the malleability essential to empirical concepts; the structure of empirical concepts required for inductive inference; and the limits of philosophical insight into psychological processes.
