Research in neuroscience and brain imaging show that exposure of learners to multi-semiotic problems enhance cognitive control of inter-hemispheric attentional processing in the lateral brain and increase higher-order thinking. Multi-semiotic representations of conceptual meaning are found in most knowledge domains where issues of quantity, structure, space, and change play

important roles, including applied sciences and social science.

Teaching courses in History and Theory of Architecture to young architecture students with pedagogy for conceptual thinking allows them to connect analysis of historic artifact, identify pattern of design ideas extracted from the precedent, and transfer concepts of good design into their creative design process.

that enhances higher-order thinking, deepens comprehension of conceptual content, and improves learning outcomes. Based on the rich literature on word meaning and concept formation in linguistics and semiotics, and in developmental and cognitive psychology, it shows how independent studies in these disciplines converge on the necessary clues for constructing a procedure for the demonstration of mastery of knowledge with equivalence-of-meaning across multiple representations. Featuring a wide range of topics such as

The two lectures presented in this important volume were delivered by Erik H. Erikson at the second annual Jefferson Lectures in the Humanities, sponsored by The National Endowment for the Humanities. In the first lecture, entitled "The Founders: Jeffersonian Action and Faith," Erikson uses selected themes from Jefferson's life to illustrate some principles of psychohistory. In the

second lecture, "The Inheritors: Modern Insight and Foresight," Erikson applied his main concepts to the problems of ongoing history. The title of the lectures contains one such concept. "New identity" is the result of radical historical change and is here meant to characterize the emerging American identity as first embodied in such men as Jefferson. Erikson first explores certain themes in his examination of

the emerging American identity during Jefferson's time. He then attempts to relate the Jeffersonian themes to contemporary problems of repression and suppression, of moralistic vindication, and true liberation by insight. Finally, Erikson maintains that now that children will be born by the privileged choice of parental persons, an adult environment fitting the living and the to-be-living becomes

an ethical necessity. There is no question that this work ranks among Erikson's most challenging and seminal books.
