Society relies heavily on credit for most financial decisions. Today, good credit is not just important for getting a loan or a credit card. Many businesses have to check your credit before deciding whether or not they will extend their products and services to you. Mortgage lenders need to be sure that you will pay your mortgage responsibly before they can finance you. Without good credit, the mortgage lender concludes that giving you a loan is risky for them. If they still approve, regardless of your poor credit, they will charge you a very high interest rate. Bad credit will see you pay a higher mortgage amount or worse, your mortgage application will be declined. Just because you are not currently interested in buying a house does not mean that your credit does not matter. Landlords will, in most cases, consult your credit before renting you a house or apartment. Your lease is considered a loan. You require a loan to purchase a car unless you have the full amount at hand. Your credit score affects the loan amount and interest rate and whether or not you will be given the loan in the first place. With excellent credit, you will qualify for a higher loan amount and the interest rate will be lower. A poor credit score translates to limited options. Not many lenders will be ready to finance you and the few that will be willing might charge a very high interest rate. The price of college tuition has increased more than any other major good or service for the last twenty years. Nine out of ten American high school seniors aspire to go to college, yet the United States has fallen from world leader to only the tenth most educated nation. Almost half of college students don't graduate; those who do have unprecedented levels of federal and private student loan debt, which constitutes a credit bubble similar to the mortgage crisis. The system particularly fails the first-generation, the low-income, and students of color who predominate in coming generations. What we need to know is changing more quickly than ever, and a rising tide of information threatens to swamp knowledge and wisdom. America cannot regain its economic and cultural leadership with an increasingly ignorant population. Our choice is clear: Radically change the way higher education is delivered, or resign ourselves to never having enough of it. The roots of the words "university" and "college" both mean community. In the age of constant connectedness and social media, it's time for the monolithic, millennium-old, ivy-covered walls to undergo a phase change into something much lighter, more permeable, and fluid. The future lies in personal learning networks and paths, learning that blends experiential and digital approaches, and free and open-source educational models. Increasingly, you will decide what, when, where, and with whom you want to learn, and you will learn by doing. The university is the cathedral of modernity and rationality, and with our whole civilization in crisis, we are poised on the brink of Reformation.

College is an investment in a student's future. Students who graduate from college earn, over the course of their working lives, on average a million dollars more than their peers who don't hold a college degree. A college education also provides students with an education that prepares them for civic participation in our democratic Republic. Because other Coloradoans believe college is important to a student's future, taxpayers provide resident undergraduate students with a stipend to help offset the cost of college. Through the College Opportunity Fund, students get state assistance to help finance their college education. Combined with other financial aid, scholarships, work study and loans, college can be affordable for every Colorado student. This guide presents a snapshot of important information to guide students in choosing a college or university that is right for them. It helps students compare important information on all the schools, including the types of academic programs offered, application criteria and deadlines, and how to pay for college. Choosing to go to college is one of the best decisions students will ever make. Consider the facts: jobs requiring just a high school diploma are expected to grow by just 12 percent in the next few years while jobs requiring a college degree will grow by more than 22 percent.
