Could the story of mankind be far older than we have previously believed? Using tools as varied as archaeo-astronomy, geology, and computer analysis of ancient myths, Graham Hancock presents a compelling case to suggest that it is. “ A fancy piece of historical sleuthing . . . intriguing and entertaining and sturdy enough to give a long pause for thought. ” —Kirkus Reviews In Fingerprints of the Gods, Hancock embarks on a worldwide quest to put together all the pieces of the vast and fascinating jigsaw of mankind ’ s hidden past. In ancient monuments as far apart as Egypt ’ s Great Sphinx, the strange Andean ruins of Tihuanaco, and Mexico ’ s awe-inspiring Temples of the Sun and Moon, he reveals not only the clear fingerprints of an as-yet-undiscovered civilization of remote antiquity, but also startling evidence of its vast sophistication, technological advancement, and evolved scientific achievement. An record-breaking number one bestseller in Britain, Fingerprints of the Gods contains the makings of an intellectual revolution, a dramatic and irreversible change in the way that we understand our past—and so our future. And Fingerprints of God tells us something more. As we recover the truth about prehistory, and discover the real meaning of ancient myths and monuments, it becomes apparent that a warning has been handed down to us, a warning of terrible cataclysm that afflicts the Earth in great cycles at irregular intervals of time—a cataclysm that may be about to occur. “ Readers will hugely enjoy their quest in these pages of inspired storytelling. ” —The Times (UK)

The overwhelming majority of Americans believe in God. This conviction has existed since the beginning of recorded time and is shared by billions around the world. In The God Gene, Dr. Dean Hamer reveals that this inclination towards religious faith is in good measure due to our genes and may even offer an evolutionary advantage by helping us get through difficulties, reducing stress, preventing disease, and extending life. Popular science at its best, The God Gene is an in-depth, fully accessible inquiry into cutting-edge research that can change the way we see ourselves and the world around us. Written with balance, integrity, and admirable scientific objectivity, this is a book for readers of science and religion alike.

The crowning work of the best-selling Earth Chronicles series • Reveals the existence of physical evidence of alien presence on Earth in the distant past • Identifies and describes the demigods, such as Gilgamesh, descended from these visitors • Outlines the tests of this physical evidence of alien presence that could unlock the secrets of health, longevity, life, and death In whose genetic image were we made? From his first book The 12th Planet on, Zecharia Sitchin has asserted that the Bible ’ s Elohim who said “ Let us fashion The Adam in our image and after our likeness ” were the gods of Sumer and Babylon—the Anunnaki who had come to Earth from their planet Nibiru. The Adam, he wrote, was genetically engineered by adding Anunnaki genes to those of an existing hominid, some 300,000 years ago. Then, according to the Bible, intermarriage took place: “ There were giants upon the Earth ” who took Adam ’ s female offspring as wives, giving birth to “ heroes of renown. ” With meticulous detail, Sitchin shows that these were the demigods of Sumerian and Babylonian lore, such as the famed Mesopotamian king Gilgamesh as well as the hero of the Deluge, the Babylonian Utnapishtim. Are we then, all of us, descendants of demigods? In this crowning oeuvre, Zecharia Sitchin proceeds step-by-step through a mass of ancient writings and artifacts, leading the reader to the stunning Royal Tombs of Ur. He reveals a DNA source that could prove the biblical and Sumerian tales true, providing conclusive physical evidence for past alien presence on Earth and an unprecedented scientific opportunity to track down the “ Missing Link ” in humankind ’ s evolution, unlocking the secrets of longevity and aver the ultimate mystery of life and death.

Today, DNA Science reveals that almost all the Jews in the world come from Khazaria. They are not of the blood lineage of Abraham and the prophets, but of King Bulan and the pagan peoples of the Caucasus. The ancestors of today’s Jews are not Israelites but are Khazarians.Khazaris’s people, in the 8th century, converted from paganism to Judaism. In the 10th century, these Khazarian "Jewish" converts emigrated to Eastern Europe, and especially Poland and Lithuania. In 1948, the Khazars, erroneously believing themselves to be "Jews," arrived in the territory of Palestine and set up the state of Israel. The people of Israel today are virtually all of Khazar (Turk/Mongol stock) extraction. The Jews have no genetic claims to the land of Israel and no family connection whatsoever to historical Israel. DNA science joins recent discoveries in history and archaeology to present the world with a correct and remarkable picture of the Jewish people. Now, everything changes!

An urgent plea for a broader understanding and awareness of the unconsidered dangers of new genetic technologies Since 2010 it has been possible to determine a person’s genetic makeup in a matter of days at an accessible cost for many millions of people. Along with this technological breakthrough there has emerged a movement to use this information to help prospective parents “eliminate preventable genetic disease.” As the prospect of systematically excluding the appearance of unwanted mutations in our children comes within reach, David B. Goldstein examines the possible consequences from these types of choices. Engaging and accessible, this clarion call for responsible and informed stewardship of the human genome provides an overview of what we do and do not know about human genetics and looks at some of the complex, yet largely unexplored, issues we must be most careful about as we move into an era of increasing numbers of parents exercising direct control over the genomes of their children.

A scholar and New York Times–bestselling author shares his shocking theory of an ancient language—found in the decoded elements of our DNA—that shines new light on the mysteries of existence What would it mean to discover an ancient language—a literal message—hidden within the DNA of life itself? What we once believed of our past is about to change. A coded message has been found within the molecules of life, deep within the DNA in each cell of our bodies. Through a remarkable discovery linking Biblical alphabets to our genetic code, the “language of life” may now be read as the ancient letters of a timeless message. Regardless of race, religion, heritage, or lifestyle, the message is the same in each cell of every woman, child, and man, past and present. Sharing all-new, fascinating research, Gregg Braden discusses the life-changing discovery that led him from a successful career in the aerospace and defense industries to an extensive 12-year study of the most sacred and honored traditions of humankind.

Dr Francis S. Collins, head of the Human Genome Project, is one of the world’s leading scientists, working at the cutting edge of the study of DNA, the code of life. Yet he is also a man of unshakable faith in God. How does he reconcile the seemingly unreconcilable? In THE LANGUAGE OF GOD he explains his own journey from atheism to faith, and then takes the reader on a stunning tour of modern science to show that physics, chemistry and biology -- indeed, reason itself -- are not incompatible with belief. His book is essential reading for anyone who wonders about the deepest questions of all: why are we here? How did we get here? And what does life mean?

Examines the Anunnaki gods’ evolving relationships with humanity, their power struggles, and the details of their nuclear war on Earth • Analyzes the crisis and rationale behind the Anunnaki decision to nuke 5 cities in the Jordan plain, resulting in the obliteration of Sumerian civilization • Draws upon the work of Zecharia Sitchin, the Book of Genesis, Sumerian clay tablets, and archaeological evidence such as ancient radioactive skeletons • Examines the Anunnakis’ lack of higher consciousness, their reliance on technology, their sacred power objects and sacred geometry, and the possibility of Anunnaki bases on Mars in the distant past The detonation of nuclear weapons in the 20th century was not the first time humanity has seen such terrible destruction. Drawing upon the work of Zecharia Sitchin, the Book of Genesis, Sumerian clay tablets, and archaeological evidence such as ancient radioactive skeletons, Chris Hardy reveals the ancient nuclear event that destroyed the Sumerian civilization and the power struggles of the “gods” that led up to it. The author explains how the Anunnaki came to Earth from the planet Nibiru seeking gold to repair their ozone layer. Using genetic engineering, they created modern humanity to do their mining work and installed themselves as our kings and our gods. Anunnaki god Enki had a fatherly relationship with the first two humans. Then Enlil, Enki’s brother, took over as Commander of God, instating a sole-god theocracy and a war against the clan of Enki and humanity for spoiling the Anunnaki bloodlines through interbreeding. This shift imposed a blackout not only of the very human nature of the Anunnaki “gods” but also of humanity’s own ancient past on Earth. Two of Enli’s attacks against the Enki clan and humanity are described in the stories of the Deluge and the Tower of Babel. His final attempt, after coercing the Assembly of the Gods into voting yes, was the nuclear bombing of 5 cities of the Jordan plain, including Sodom and Gomorrah, which resulted in the destruction of the Sumerian civilization and the Anunnakis’ own civilization on Earth, including their space port in the Sinai. The author reveals how, after each attempt, humanity was saved by Enki, chief scientist Ninnah, and Enki’s son Hermes. The author explores how the Anunnakis’ reliance on technology and their recurrent wars caused them to lose touch with cosmic consciousness. And she reveals how we will be doomed to repeat this dynamic until humanity awakens to our true origins.

Compiled from more than four hundred hours of channeling by Barbara Marcantunio, Bringers of the Dawn imparts to us the wisdom of the Pleiadians, a group of enlightened beings who have come to Earth to help us discover how to reach a new stage of evolution. Master storytellers and humorists, they advise us to become media free, to work in teams, and to eliminate the words “should” and “try” from our vocabularies. We learn how to go beyond fear, how the original human was a magnificent being with twelve strands of DNA and twelve chakra centers, and who our “gods” are. Startling, intense, intelligent, and controversial, these teachings offer essential reading for anyone questioning their existence on this planet and the direction of our collective conscious—and unconscious. By remembering that we are Family of Light, that we share an ancient ancestry with the universe around us, we become “bringers of the dawn,” consciously creating a new reality, a new Earth.

Gods, Demigods, and Human Ancestry: The Evidence of Alien DNA

You have an identity with divinity! This book will give you an exciting new perspective on how God’s “blueprint of life” has been places into both your physical and spiritual being. Even more, you will discover how, as a born-again believer, you have a genetic heritage that transforms you into the image of God. As you will learn, the Creator has places sacred strands of His being into you, waiting to be activated. His touch can transform your emotions, quicken your mind, and prepare you for a divine purpose. THE DIVINE DNA Says author Pitre, “I want to show you how receiving Christ stamps His DNA on your very soul and gives you His life-changing characteristics.

They remind you of lives, shaping our features, our health, and our behavior, even in the sacred realms of love and sex, religion, aging, and death. Yet we are the ones who house, perpetuate, and give the promise of immortality to these biological agents, our genetic gods. The link between genes and gods is hardly arbitrary, as the distinguished evolutionary geneticist John Avise reveals in this compelling book. In clear, straightforward terms, Avise reviews recent discoveries in molecular biology, evolutionary genetics, and human genetic engineering, and discusses the relevance of these findings to issues of ultimate concern traditionally reserved for mythology, theology, and religious faith. The book explains how the genetic gods figure in our development—not just our metabolism and physiology, but even our emotional disposition, personality, ethical leanings, and, indeed, religiosity. Yet genes are physical rather than metaphysical entities. Having arisen via an amoral evolutionary process—natural selection—genes have no consciousness, no sentient code of conduct, no reflective concern about the consequences of their actions. It is Avise’s contention that current genetic knowledge can inform our attempts to answer typically religious questions—about origins, fate, and meaning. The Genetic Gods challenges us to make the necessary connection between what we know, what we believe, and what we embody. Table of Contents: Preface Prologue 1. The Doctrines of Biological Science 2. Genesis 3. Genetic Maladies 4. Genetic Beneficence 5. Strategies of the Genes 6. Genetic Sovereignty 7. New Lords of Our Genes? 8. Meaning Epilogue Notes Glossary Index Reviews of this book: Our genes, [Avise] says, are responsible not only for how we get our here and exist day to day, but also for the core of our being—our personalities and morals. It is our genetic make-up that allows for and formulates our religious belief systems, he argues. Avise does not eschew spirituality but seeks a more informed, less confrontational approach between science and the pulp.—Science News Reviews of this book: For the general scientific reader, the book is an excellent distillation of a broad and increasingly important field, a course of causation that cannot be ignored. From advising expectant parents to prevent innocent people off death row, genetics increasingly dominates our lives. The sections on genetics are expertly written, particularly for those readers without in-depth knowledge. The author explains slowly and carefully just how genetics operates, using multiple metaphors. His genetic discourse proceeds in a neighborly fashion, as one might tell stories while sitting in a rocking chair at a country store. He seems to be invigorated by genes and just can't wait to tell about them. --David W. Hodo, Journal of the American Medical Association Reviews of this book: As a whole, this book is quite informative and stimulating, and sections of it are beautifully written. Indeed, Professor Avise has a real gift for prose and scientific expositions, and I would suspect that he must be a formidable lecturer....At its core, [The Genetic Gods] is a survey, and a very nice one at that, of evolutionary genetics, the field of the author’s major research interests. There is a strong sociobiological cast to the arguments, and the work and ideas of E. O. Wilson figure prominently. The presentation of evolutionary genetics is imbedded in a more general discussion of modern human and molecular genetics....However, this book is, most of all, a philosophical treatise that attempts, admittedly with the bias of a biologist, to examine the intersection of the fundamental premises of evolution and religion. Professor Avise has given us plenty to think about in this book [and]...it was a real pleasure to wrestle with the ideas he was presenting. I would suggest that other readers give it a try. --Charles J. Epstein, Trends in Genetics Reviews of this book: [Avise’s] account of the role genes play in shaping the human condition is wholly involving, paying particular attention to issues of reproduction, aging and death. In addition to presenting ample biological information in a form accessible to the nonspecialist, Avise does a superb job of discussing many of the ethical implications that have arisen from our growing knowledge of human genetics. Just a few of the topics covered are genetic engineering, the patenting of life, genetic screening, abortion, human cloning, gene therapy and insurance-related controversies. --Publishers Weekly Reviews of this book: Avise explains thoroughly how evolution operates on a genetic level. His goal is to show that humans can look to this information as a way to answer fundamental questions of life instead of looking to traditional religious beliefs...Avise includes some very interesting discussions of ethical concerns related to genetic issues. --Eric D. Albright, Library Journal This is a splendid account of a subject that affects us all: the breathtaking increase in understanding of human genetics and the insight it provides into human evolution. John Avise speaks with authority of molecular evolutionary genetics and with affecting compassion of what it might mean. --Douglas J. Futuyma, State University of New York at Stony Brook The Genetic Gods is many things. It is a wonderful introduction to modern molecular biology, by a man who knows his subject backwards. It is a stimulating account of the ways in which genetics impinges on human nature—our thinking and our behavior. It is a remarkably level-headed and sympathetic account of the implications of our new findings for traditional and non-so-traditional issues in philosophy and religion. In an age of genetic counseling, cloning, construction of new life forms, the book is worth its weight in gold for this alone. But most of all, it is a huge amount of fun to read—you want to applaud or argue with the author on nigh every page. Highly recommended! --Michael Ruse, University of Guelph The Genetic Gods makes a valuable contribution to the on-going task of sorting out the implications of evolutionary biology and genetics for human self-understanding. Avise writes with authority and insight about the most consequential intellectual issues of our time. A challenging and insightful book. --Loyal Rue, Harvard University A wonderfully informative and engaging book. Avise offers a lucid, accessible primer on our genes, angelic and demonic, and examines religious and ethical issues, all too human, now confronted by genetic science. He makes a compelling case that anyone seeking to “Know Themselves” should study the DNA molecular scriptures, our most ancient and universal legacy. --Dudley Herschbach, Harvard University, Nobel Laureate in Chemistry Watson and Crick discovered the human DNA. We made the difference we deciphering it. Like the human body, every organization has a DNA. What will make the difference is not seeing it, but sequencing it. It’s the key to long-term success at innovation. Sequencing, written by business consultant Michael Metzger, explores what is required for a company to develop a culture that promotes innovation for the long haul. Harvard’s Clayton Christensen reports that few companies have the capacity to innovate. The more success a company achieves, the harder it is for the company to innovate. And yet the reality is that companies innovate on it. Metzger outlines the steps necessary to sustain innovation - the culture, conscience, and C-level leadership required. It begins by having an accurate assessment of human nature and reality. Institutional leaders ignore this book at their peril.

Visiting Martin Luther King, Jr. at the peak of the civil rights movement, the journalist William Worthy almost sat on a loaded pistol. “Just for self-defense,” King assured him. One of King’s advisors remembered the reverend’s home as “an arsenal.” Like King, many nonviolent activists embraced their constitutional right to self-protection—yet this crucial dimension of the civil rights struggle has been long ignored. In This Nonviolent Stuff’ll Get You Killed, civil rights scholar Charles E. Cobb, Jr. reveals how nonviolent activists and their allies kept the civil rights movement alive by bearing—and, when necessary, using—firearms. Whether patrolling their neighborhoods, garrisoning their homes, or firing back at attackers, these men and women were crucial to the movement’s success, as were the weapons they carried. Drawing on his firsthand experiences in the Southern Freedom Movement and interviews with fellow participants, Cobb offers a controversial examination of the vital role guns have played in securing American liberties.

Within two decades, aspects of daily human life will be unrecognizable. AI will generate unprecedented wealth, revolutionize medicine and education through human-machine symbiosis, and create brand-new forms of communication and entertainment. In liberating us from routine work, however, AI will also challenge the organizing principles of our economic and social order. Meanwhile, AI will bring new risks in the form of autonomous weapons and smart technology that inherits human bias. AI is at a tipping point, and people need to wake up—both to AI’s radiant pathways and its existential perils for life as we know it. In this provocative, utterly original work, Kai-Fu Lee, the former president of Google China and bestselling author of AI Superpowers, teams up with celebrated novelist Chen Qiufan to imagine our world in 2041 and how it will be shaped by AI. In ten gripping short stories, they introduce readers to an array of eye-opening 2041 settings, such as: • In San Francisco, the “job reallocation” industry emerges as deep learning AI causes widespread job displacement • In Tokyo, a music fan is swept up in an immersive form of celebrity worship based on virtual reality • In Mumbai, a teenage girl rebels when AI’s crunching of big data gets in the way of romance • In Seoul, virtual companions with perfected natural language processing (NLP) skills offer orphaned twins new ways to connect • In Munich, a rogue scientist draws on quantum computing, computer vision and other AI technologies in a revenge plot that imperils the world by gazing toward a not-so-distant horizon, AI 2041 offers urgent insights into our collective future—while reminding readers that, ultimately, humankind remains the author of its destiny.

How sacred sites amplify the energies of consciousness, the earth, and the universe • Examines the web of geometrical patterns linking sacred sites worldwide, with special focus on the sacred network of ley lines in Paris • Unveils the coming state of shared consciousness for humanity fueled by the sacred network • Reveals how consciousness is a tangible form of energy First marked by the standing stones of our megalithic ancestors, the world’s sacred sites are not only places of spiritual energy but also hubs of cosmic energy and earthly energy. Generation upon generation has recognized the power of these sites, with the result that each dominant culture builds their religious structures on the same spots—the Cathedral of Notre Dame in Paris, for example, was constructed over a Temple to Diana that in turn had been built over a stone pillar worshiped by the Gauls. In The Sacred Network, Chris Hardy shows how the world’s sacred sites coincide with the intersections of energetic waves from the earth’s geomagnetic field and how—via their megaliths, temples, and steeples—these sites act as antennae for the energies of the cosmos. Delving deeply in to Paris’s sacred network, she also explores the intricate geometrical patterns created by the alignments of churches and monuments, such as pentagrams and Stars of David. Revealing that consciousness is a tangible energy, she explains how the sacred network is fueling an 8,000-year evolutionary cycle initiated by our megalithic ancestors that will soon culminate in a new state of shared consciousness for humanity.

It’s about heart change, not behavior change. That’s the conviction of Tim Chester as he seeks to help everyday Christians “connect the truth about God with our Monday-morning struggles.” This interactive book, laid out in workbook fashion, is for newer Christians struggling with sin and for more mature Christians who have plateaued in their faith as they seek to find victory over sin in their lives. With a conviction that sanctification is God’s work and the journey to holiness is joyful, Chester guides readers through a “change project”-beginning with the selection of one area of life they would like to modify. Each chapter includes a question (e.g., Why would you like to change? What traits do you need to turn to?) to guide readers as they deal with a specific sin or struggle, truths from God’s word, and a reflection guide to help readers through their change project.

The Whitbread Prize-winning author of Oranges Are Not the Only Fruit delivers a novel that “transports us to something like the future of our own planet” (The Washington Post Book World). On the airwaves, all the talk is of the new blue planet—pristine and habitable, like our own was sixty-five million years ago, before we took it to the edge of destruction. Off the air, Billie Cruise and the renegade Robo sapien Spike are falling in love. Along with Captain Handsome and Pink, they’re assigned to colonize the new blue planet. But when a technical maneuver intended to make it inhabitable backfires, Billie and Spike’s flight to the future becomes a surprising return to the distant past—“Everything is imprinted forever with what it once was.” What will happen when their story combines with the world’s story? Will they—and we—ever find a safe landing place? Playful, passionate, polemical, and frequently very funny, The Stone Gods will change forever the stories we tell about the earth, about love, and about stories themselves. “Scary, beautiful, witty and wiseful by turns, dipping into the known past as it explores potential futures.”—The New York Times Book Review “[A book] that you don’t so much read as drink in, refuse to put down, cast aside if/like a hunting dog, seeking against all odds the insight that will illuminate everything, a true answer to the fit we’re in.”—Los Angeles Times “A vivid, cautionary tale—er, more precisely, a keen lament for our irremediably incautious species.”—Ursula K. DNA of the Gods The Anunnaki Creation Of Eve And The Alien Battle For Humanity

Connects a diverse range of new and existing theories about the Anunnaki, offering a definitive guide to the Anunnaki while exploring their possible connection to humanity’s past, present, and future. Over 6,000 years ago, the world’s first civilization, the Sumerians, were recording stories of strange celestial gods who they believed came from the heavens to create mankind. These gods, known as the Anunnaki, are often neglected by mainstream historians. The Sumerians themselves are so puzzling; scholars have described their origin as “The Sumerian Problem.” With so little taught about the ancient Sumerians in our history books, alternative theories have emerged. This has led many to wonder, What is the true story behind the Sumerians and their otherworldly gods, the Anunnaki? In The Anunnaki Connection, Heather Lynn connects a diverse range of new and existing theories about the Anunnaki, offering a definitive guide to Mesopotamian gods while exploring what role they might have played in engineering mankind. The Anunnaki Connection traces the evolution of gods throughout the Ancient Near East, analyzing the religion, myth, art, and symbolism of the Sumerians, investigating: Who are the Anunnaki? How accurate are the current Sumerian text translations, and how do we know for sure who to believe? Is there a connection between the Anunnaki and other ancient gods? What about demons? Where are the Anunnaki now? Will their possible return spell the end of our world?

This doomsday masterpiece from the author of Eon and Hull Zero Three was a finalist for the Hugo and Nebula awards. On July 26, Arthur Gordon learns that Europa, the sixth moon of Jupiter, has disappeared. Not hiding, not turned black, but gone. On September 28th, Edward Shaw finds an error in the geological records of Death Valley. A cinder cone was left off the map. Could it be new? Or, stranger yet, could it be artificial? The answer may be lying beside it—a dying Guest who brings devastating news for Edward and for Planet Earth. As moon unexplained phenomena spring up around the globe—a granite mountain appearing in Australia, sounds emanating from the earth’s core, flashes of light among the asteroids—it becomes clear to some that the end is approaching, and there is nothing we can do. In The Forge of God, award-winning author Greg Bear describes the final days of the world on both a massive, scientific scale and in the everyday, emotional context of individual human lives. Facing the destruction of all they know, some people turn to God, others to their families, and a few others promising escape from a planet being torn apart. Will they make it in time? And who gets left behind to experience the last moments of beauty and chaos on earth? Nominated for the Nebula, Hugo, and Locus Awards, The Forge of God is an engrossing read, breathtaking in its scope and in its detail.

An in-depth study of humanity’s Anunnaki origins and the Anunnaki battle for an intelligent versus enslaved humanity • Explains the genetic engineering of humanity by an Anunnaki scientist Ninnah • Shows how the concepts of sin and the inferiority of women arose from Enlil’s will to keep humanity underdeveloped, clashing with Enki’s and Ninnah’s plan to make us equal in intelligence • Reveals how humanity’s long history of conflict was shaped by the battle between Enki and his brother Enlil Further developing the revolutionary work of Zecharia Sitchin, Chris Hardy shows that the “gods” of ancient myth, visitors from the planet Nibiru, created us using their own “divine” DNA—first through DNA extraction from their own ribs’ marrow and later by direct relations with early human females. Drawing upon multiple sacred texts, Hardy details the genetic engineering of humanity by Anunnaki scientist Ninnah, with the help of Enki and Hermes. She reveals how Ninnah’s first female human creation, Tiamat/Eve, contained more alien DNA than the earlier male one, Adamu, and how the biblical Noah represents the perfection of her work. Examining the war between Anunnaki brothers Enki and Enlil, Hardy reveals how the concepts of sin and the inferiority of women were born out of Enlil’s attempts to enslave and then wipe out humanity, repeatedly thwarted by Enki and Ninnah. The author further explains how the sacred sexuality taught to humans—still seen in Tantric practice—became suppressed millennia later by the patriarchal concept of original sin and how innocent Eve took the blame for the expulsion from Eden and fall from Grace. Showing that the god who created us was not the same god who expelled us from Eden, Hardy explains that there will be no apocalypse because the Good/Evil duality has never truly existed—it has been only enemy gods fighting and implicating humanity in the wake of their own competition for power. With a full psychological understanding of how the ancient “gods” have shaped humanity’s ongoing history of conflict, we can move beyond the framework of “(my) Good versus (your) Evil” imposed by Enlil and begin to steer our own planetary destiny.

An in-depth analysis of Sitchin’s revelations about the Anunnaki, early humanity, and Earth’s future • Examines Sitchin’s research into the Anunnaki arrival on Earth, the lineage of the Neffilim, their space travel technology, and their creation of modern humans • Written by longtime Sitchin friend and colleague M. J. Evans, Ph.D., and draws upon her research and personal discussions with Sitchin • Explores the lust and love-making relationships of the Neffilim and suggests we inherited our warlike and love-making tendencies from them Known for his provocative interpretations of ancient Sumerian and Akkadian clay tablets, Zecharia Sitchin (1920-2010) read the words of our most ancient ancestors as fact and, through decades of meticulous research, showed that these ancient tablets revealed a coherent narrative about the extraterrestrial inhabitants of the origins of modern humanity. Drawing upon her many conversations with Zecharia Sitchin over nearly 20 years, M. J. Evans, Ph.D., longtime Sitchin friend and colleague, provides an in-depth analysis of Sitchin’s revelations about the Anunnaki, focusing on Anunnaki activities on Earth and Earth’s future. She explores the genesis of Sitchin’s interest in the Neffilim, the leaders of the Anunnaki, and the controversy caused by the publication of Sitchin’s first book, The 12th Planet. She examines Sitchin’s research into the Neffilim family tree, the Anunnaki arrival on Earth to mine gold to repair the atmosphere on their planet, Nibiru, and their creation of modern humans as workers for their mines and to build their civilization on Earth. She shows how, in the context of 21st-century technological capabilities, Sitchin’s work casts a different light on ancient events, with implications for our future. The author reveals the details of the love and lust proclivities of the Neffilim gods Ann, Enlil, and Enki and the goddess Ishtar/Inanna and shows how we inherited these tendencies from our Anunnaki creators as well as their use of war for problem solving. Concluding with an examination of Sitchin’s prediction of a nuclear event on Earth in 2024 AD, she shows how we would be repeating

the aggressive warlike behaviors of our Anunnaki creators, who may very well become our saviors when Nibiru next returns to our solar system.

Volume 3 of 3 books starts with the world-class African Empires of Europe's Middle Ages. Black Africans experienced the height of global civilization, wealth, influence and hegemony. White Europeans lived in squalor, poverty, unsanitary conditions, ignorance, illiteracy and barbarism. Black Moors would occupy and civilize much of Western and Southern Europe bring civilization, hygiene, literacy and order through inbred dynasties and nobility. Their progeny controlled the Christian Church and worshipped black deities. Resentment arose among the Germanic subjects to the absolute rule and faith controlled by their saviors who were Black Moors. That rule was challenged and overturned by the Protestant Reformation, Thirty and Hundred Year Wars, and popular revolutions that either removed the African monarchs or restricted their authority to symbolism of tradition. All cosmetic races of this black rule were purged. Subsequently, the ideology of "scientific racism" emerged to classify blacks as intellectual and physical inferior to whites and incapable of ruling the so-called dominant melanin-less race. Black Africans were written-out of history and humanity. The conquest and destruction of African civilization facilitated this subordination. The depopulation of Africans to the Americas as slaves to maximize wealth and build capital facilitated the dehumanization effort while transforming Europeans from utter poverty to wealthiest population on the planet. Yet, the seeds of their racist transformation planted itself in its own self-destruction that unfolding in the 21st century. Wealth built on slavery or slave wages evolved to the outsourcing of jobs to generate enormous capital for elites. It also brought about terrorism, enormous treasure spent on was and domestic security, destruction of the standard of living, the demise of the infrastructure and the quality of life. The impoverished "others" vital to the generations of wealth are furthered dehumanized and scapegoated. Western nations turn towards isolation bordering on feudalism engulfing much of Medieval Europe not occupied by Africa's global hegemony promoted by Black Moors. Low-information white Westerners led by xenophobic, racist, nationalists, like Donald J. Trump and David Duke, are unaware of the true lessons of history that diversity, trade and exchange of ideas built world-class empires and sustainable wealth. The nativism they offer retards progress, redirects it toward stagnation and backwardness into feudalism, tribalism and return to the caves and primitivism.

Since the publication in 1859 of Darwin's Origin of Species, debate over the theory of evolution has been continuous and often impassioned. In recent years, opponents of "Darwin's dangerous idea" have mounted history's most sophisticated and generously funded attack, claiming that evolution is "a theory in crisis." Ironically, these claims are being made at a time when the explosion of information from genome projects has revealed the most compelling and overwhelming evidence of evolution ever discovered. Much of the latest evidence of human evolution comes not from our genes, but from so-called "junk DNA," leftover relics of our evolutionary history that make up the vast majority of our DNA. Relics of Eden explore this powerful DNA-based evidence of human evolution. The "relics" are the millions of functionally useless but scientifically informative remnants of our evolutionary ancestry trapped in the DNA of every person on the planet. For example, the analysis of the chimpanzee and Rhesus monkey genomes shows indisputable evidence of the human evolutionary relationship with other primates. Over 95 percent of our genome is identical with that of chimpanzees and we also have a good deal in common with other animal species. Author Daniel J. Fairbanks also discusses what DNA analysis reveals about where humans originated. The diversity of DNA sequences repeatedly confirms the archeological evidence that humans originated in sub-Saharan Africa (the "Eden" of the title) and from there migrated through the Middle East and Asia to Europe, Australia, and the Americas. In conclusion, Fairbanks confronts the supposed dichotomy between evolution and religion, arguing that both science and religion are complementary ways to seek truth. He appeals to the vast majority of Americans who hold religious convictions not to be fooled by the pseudoscience of Creationists and Intelligent Design advocates and to abandon the false dichotomy between religion and real science. This concise, very readable presentation of recent genetic research is completely accessible to the nonspecialist and makes for enlightening and fascinating reading.

Humankind has been attempting to answer complex questions for thousands of years. Is there a God? Where do we come from? Is there life somewhere else? Are we alone? Who created us? Is there an afterlife? Is there hell? In the early 1800s, over thirty thousand tablets were found in the ancient biblical city of Nineveh that included the Assyrian palace reliefs, the library of Ashurbanipal, and the Enuma Elish (also known as the Seven Tablets of Creation) that tell the story of the formation of the world and humanity and of the Anunnaki, gods who arrived from the heavens to create the human race. In a comprehensive study, Sonny Ramirez reveals translations of the findings as well as new discoveries in a passionate search for the truth about the origins of humankind as he attempts to piece together the Anunnaki connection and ultimately discover whether the gods of Earth, men, and Nibiru are still with us today. Anunnaki Gods of Earth and Nibiru share and analyze ancient texts that will encourage others to open their minds, imagine the unimaginable, and dream of the possibilities that an endless universe can hold.

In Cosmic DNA at the Origin, systems scientist Chris H. Hardy, Ph.D., lays the foundations for a universe in which consciousness is the driving force of creation that we experience in our lives, and yet a hyperdimension of collective intelligence...all the way to the origin. This is a thought-provoking theory of the origin of the universe, called The Infinite Spiral Staircase Theory. In a witty and well-informed style, Hardy takes us on a grand tour of the 5th dimension, black holes, the Zero Point and vacuum, and the hottest cosmologies, to show that adding this ISS hyperdimension of consciousness (interlaced with hyperspace and hypertime) not only is very consistent with most physics discoveries, but also explains why we are endowed with consciousness. Moving beyond the materialistic or random frameworks, Hardy weaves a new cosmological paradigm in which consciousness and matter evolve in synchrony, and a part of our being is hyperdimensional. From the point of origin, an immense time before the first quantum, before particles and matter, space and time are born, this hyperdimension unfolds as a golden spiral driven by the phi ratio-an Infinite Spiral Staircase. It bears on its innumerable spires a boundless field of information issued from parent universes, that contains the imprint of all beings and worlds of many past experiments; and yet, this 'Cosmic DNA' is a field of potentials that is neither deterministic nor limiting for our own universe. Rather, it is a collective consciousness that will grow and choose its innumerable paths; it is the true dimension of our Sells and individual consciousnesses. Readers aspiring at moving beyond the materialistic paradigm and willing to understand how the universe is a coherent whole, endowed with consciousness, will find this book extremely challenging.

A Best Book of 2021 by Bloomberg BusinessWeek, Time, and The Washington Post The bestselling author of Leonardo da Vinci and Steve Jobs returns with a "compelling" (The Washington Post) account of how Nobel Prize winner Jennifer Doudna and her colleagues launched a revolution that will allow us to cure diseases, fend off viruses, and have healthier babies. When Jennifer Doudna was in sixth grade, she came home one day to find that her dad had left a paperback titled The Double Helix on her bed. She put it aside, thinking it was one of those detective tales she loved. When she read it on a rainy Saturday, she discovered she was right, in a way. As she sped through the pages, she became enthralled by the intense drama behind the competition to discover the code of life. Even though her high school counselor told her girls didn't become scientists, she decided she would. Driven by a passion to understand how nature works and to turn discoveries into inventions, she would help to make what the book's author, James Watson, told her was the most important biological advance since his codiscovery of the structure of DNA. She and her collaborators turned a curiosity of nature into an invention that will transform the human race: an easy-to-use tool that can edit DNA. Known as CRISPR, it opened a brave new world of medical miracles and moral questions. The development of CRISPR and the race to create vaccines for coronavirus will hasten our transition to the next great innovation revolution. The past half-century has been a digital age, based on the microchip, computer, and internet. Now we are entering a life-science revolution. Children who study digital coding will be joined by those who study genetic code. Should we use our new evolution-hacking powers to make us less susceptible to viruses? What a wonderful boon that would be! And what about preventing depression? Hmmm...Should we allow parents, if they can afford it, to enhance the height or muscles or IQ of their kids? After helping to discover CRISPR, Doudna became a leader in wrestling with these moral issues and, with her collaborator Emmanuelle Charpentier, won the Nobel Prize in 2020. Her story is an "enthralling detective story" (Oprah Daily) that involves the most profound wonders of nature, from the origins of life to the future of our species.

Nuclear Self-Destruction in Ancient Sumer

An examination of our consciousness's ability to pass between dimensions, both in life and after death, and how to communicate with spirits ¶ Reveals that all beings exist simultaneously in the material dimension and in the soul hyperdimension and that our consciousness transcends death ¶ Provides evidence that the deceased keep in contact with their loved ones and are able to visit them as apparitions, give them advice, and protect them ¶ Offers rigorous scientific analysis of paranormal occurrences, including evidence of life after death, house spirits, near-death and out-of-body experiences, and communication with the souls of the deceased ¶ In this exploration of consciousness, after-death communication, and the validity of near-death and out-of-body experiences, Chris H. Hardy, Ph.D., a former researcher at Princeton's Psychophysical Research Laboratories, reveals that all beings exist simultaneously in the material dimension and in the soul hyperdimension. During life, we can access the soul hyperdimension through heightened states of consciousness and dreams. After death, we cease to physically exist, but our consciousness continues on in the hyperdimension as a living soul, a complete personality able to perceive and even affect the material world. Through rigorous scientific analysis of psi experiences and surveys, the author shows that the deceased keep contact with the living by visiting them as apparitions, protecting them from harm, and even interceding to solve family problems or resolve their own unfinished business. She details her own psi and spiritual experiences, such as interactions with a house spirit, clairvoyance in lucid dreams, and her decades of communication with the souls of the deceased, including her own parents and scientific geniuses, and provides empirical evidence to support their reality. Moreover, Hardy offers tested methods for gaining access to the soul dimension and explores what can be accomplished there, including communicating with those who exist beyond our own matter world. Sharing her breakthrough understanding of the soul dimension as a hyperdimension pervading the universe, where our consciousness lives on after physical death, Hardy shows that we are all transdimensional beings and that the living souls of the spiriti dimension welcome our interaction.

Our origins as a slave species and the Anunnaki legacy in our DNA ¶ Reveals compelling new archaeological and genetic evidence for the engineered origins of the human species, first proposed by Zecharia Sitchin in The 12th Planet ¶ Shows how the Anunnaki created us using pieces of their own DNA, controlling our physical and mental capabilities by inactivating their more advanced DNA ¶ Identifies a recently discovered complex of sophisticated ruins in South Africa as the city of the Anunnaki leader Enki Scholars have long believed that the first civilization on Earth emerged in Sumer some 6,000 years ago. However, as Michael Tellinger reveals, the Sumerians and Egyptians inherited their knowledge from an earlier civilization that lived at the southern tip of Africa and began with the arrival of the Anunnaki more than 200,000 years ago. Sent to Earth in search of life-saving gold, these ancient Anunnaki astronauts from the planet Nibiru created the first humans as a slave race to mine gold--thus beginning our global traditions of gold obsession, slavery, and god as dominating master. Revealing new archaeological and genetic evidence in support of Zecharia Sitchin's revolutionary work with pre-biblical clay tablets, Tellinger shows how the Anunnaki created us using pieces of their own DNA, controlling our physical and mental capabilities by inactivating their more advanced DNA--which explains why less than 3 percent of our DNA is active. He identifies a recently discovered complex of sophisticated ruins in South Africa, complete with thousands of mines, as the city of Anunnaki leader Enki and explains their lost technologies that used the power of sound as a source of energy. Matching key mythologies of the world's religions to the Sumerian clay tablet stories on which they are based, he details the actual events behind these tales of direct physical interactions with Igod,¶ concluding with the epic flood--a perennial theme of ancient myth--that wiped out the Anunnaki mining operations. Tellinger shows that, as humanity awakens to the truth about our origins, we can overcome our programmed animalistic and slave-like nature, tap in to our dormant Anunnaki DNA, and realize the longevity and intelligence of our creators as well as learn the difference between the gods of myth and the true loving God of our universe.

David Reich describes how the revolution in the ability to sequence ancient DNA has changed our understanding of the deep human past. This book tells the emerging story of our often surprising ancestry - the extraordinary ancient migrations and mixtures of populations that have made us who we are.

A Revelation from prehistory When the ancient royal library at Nineveh--in modern-day Kouyunjik, northern Iraq--was being excavated by Austen Henry Layard in 1846, thousands of broken clay tablets carrying Akkadian inscriptions were unearthed. Dismissed as nothing more than 'decorated potshards' the countless artefacts were casually piled up and shipped over to Britain for later inspections. By the end of the 19th century Iraq was infested by European archaeologists who were busy digging up six different sites. With World War I looming, German troops joined the archaeological contest, claiming locations further south, among them the site of ancient Babylon where the sacred precinct, the Esagil temple-ziggurat, was discovered. Up north, Layard's seemingly insignificant find of decorated broken clay soon proved to be of immense archaeological importance. The Hebrew language, the only surviving from biblical antiquity, is derived from Akkadian, the Semitic mother tongue. Suspecting that the decorations on the discovered clay were some form of ancient texts, Assyriologist George Smith from the British Museum began the almost impossible process of matching the tens of thousands of broken pieces. The deciphered script signs on the fragmented clay described Nineveh library as being 'very old' and credited its collection to the Assyrian king Ashurbanipal who lived circa 2,670 years ago. In his dedication tablet, Ashurbanipal boasts that he could read several old languages, including prehistoric texts from pre-Diluvian Earth! But before one draws any comparisons to the biblical stories in Genesis, one must hear the rest of what was found. King Ashurbanipal had assembled and translated literature from his own antiquity. The question is: How far back in time was 'very old' to a king who lived 2,670 years ago? The experts that started to decipher the texts on the clay were stunned. What Layard had discovered in Iraq were tablets recording the oldest known human language, containing astonishing events the contents of which go against all that we know about humanity, the Earth and the Universe! Church officials stress that the Bible is not a book of science, alchemy and astrology. The clay records which Layard had discovered in Iraq preserve the shocking truths of Earth's
