piracy, combined with proposals arising from the Hargreaves review to introduce copyright exceptions, and a failure to strengthen copyright enforcement as envisaged by the Digital Economy Act 2010, together threaten the livelihoods of the individuals and industries that contribute over £36 billion annually to the UK economy. Also, the Olympics No Marketing Rights scheme is excessively restrictive and is preventing British creative companies from realising the benefits they deserve from the Olympic legacy. The Committee calls for: a central champion of Intellectual Property

all major pharmaceutical companies to pursue alternative model-based paradigms. The key question is: How to find innovative compounds and, subsequently, appropriate dosage regimens? Written from the industry perspective and based on many years of experience, this book offers:

- Concepts for creation of drug-disease models, introduced and supplemented with extensive MATLAB programs
- Guidance for exploration and modification of these programs to enhance the understanding of key principles
- Usage of differential equations to pharmacokinetic, pharmacodynamic and (patho-) physiologic problems thereby acknowledging their dynamic nature
- A range of topics from single exponential decay to adaptive dosing, from single subject exploration to clinical trial simulation,
