This volume addresses highly topical issues at a crucial time in international economic relations. The world has never been closer to dismantling the liberal multilateral trading system which has been painstakingly established and successfully operated since the Second World War. In this volume many of the world's most distinguished economists examine the movement toward protectionism, bilateralism, and regionalism, and its causes, effects, and possible solutions. The contributors are theorists, researchers, and advisors to governments and international organizations who are at the forefront of trade theory, policy, and practice, and whose analyses have a real impact on international trade. By collecting together these analyses in a single volume, this book provides a unique survey for students and scholars of economics, and all those concerned with trade theory and policy in business and government. A great deal of the world's history is the history of empires. Indeed it could be said that all history is colonial history, if one takes a broad enough definition and goes far enough back. And although the great historic imperial systems, the land-based Russian one as well as the seaborne empires of western European powers, have collapsed during the past half century, their legacies shape almost every aspect of life on a global scale. Meanwhile there is fierce argument, and much speculation, about what has replaced the old territorial empires in world politics. Do the United States and its allies, transnational companies,

financial and media institutions, or more broadly the forces of 'globalization', constitute a new imperial system? Stephen Howe interprets the meaning of the idea of 'empire' through the ages, disentangling the multiple uses and abuses of the labels 'empire', 'colonialism', etc., and examines the aftermath of imperialism on the contemporary world. ABOUT THE SERIES: The Very Short Introductions series from Oxford University Press contains hundreds of titles in almost every subject area. These pocket-sized books are the perfect way to get ahead in a new subject quickly. Our expert authors combine facts, analysis, perspective, new ideas, and enthusiasm to make interesting and challenging topics highly readable.

Managerial Economics in a Global Economy

Schaum's Outline of Theory and Problems of Development Economics

The share of the US economy controlled by foreign firms has tripled since the mid-1970s.

The authors find that foreign firms appear to invest in the United States mainly to exploit their individual advantages in management and technology - the same reasons why

American firms invest abroad - rather than because the United States is now running large deficits and has become a large debtor nation. Foreign-owned firms do not pay lower wages or shift good jobs and research and development away from the United States. Foreign-owned firms and especially Japanese firms do, however, have a marked tendency to import more of their production inputs. The authors warn that the President's new legislative authority to screen FDI on national security grounds could easily be abused, but endorse using this authority to ensure access to critical technologies or production processes including a requirement on some foreign firms to invest in the United States. They propose new international rules to minimize governmental interference and harmonize policies toward multinational firms.

This text uses the theory of the firm to integrate and link economic theory (microeconomics and macroeconomics), decision sciences (mathematical economics and econometrics), and the functional areas of business (accounting, finance, marketing, personnel or human resource management, and production) and shows how all of these topics are crucial components of managerial decision making. The text is divided into five parts-Part I examines the nature and scope of managerial economics, Part II analyses demand, Part III presents the theory and measurement. It covers the full range of optimization techniques used in managerial decision making. The book offers extensive end-chapter material in the form of the summary, discussion questions, problems, chapter appendixes along with appendix problems, supplementary readings, and Internet site addresses. This seventh edition includes new sections, new case studies, some of which are India based, and five new longer Indian integrated case studies. In addition, the existing case studies,

supplementary readings, and Internet site addresses have been revised.

Introduction to International Economics

International Economics by Dominick Salvatore presents a comprehensive, up-to-date, and clear exposition of the theory and principles of international economics. Salvatore presents concepts that are essential for understanding, evaluating, and suggesting solutions to the important international economic problems and issues facing the United States and the rest of the world today and that they are likely to face in the coming

The impetus for the conference that was the basis for this volume emanated from the influence of two brilliant minds-Egon Sohmen and Adam Klug, who both died at an early age, leaving their families and the professions of economics and economic history with major voids. In the course of research on the origins of Open Economy Macroeconomics, the significant contributions of Egon Sohmen came to the fore. After correspondence with some of those involved in the early development of the Open Economy Macromodel, we turned to Adam Klug for his views on the matter-as he had dealt with the history of intertemporal trade models in his Ph. D. thesis. And it was Adam who suggested the idea of a conference bringing together economists and economic historians. At this point we want to acknowledge the very generous grant from the Egon Sohmen Foundation and the active participation of Dr. Helmut Sohmen and Mrs. Renee Sohmen at the conference. We also want to thank Prof. Sir Aaron Klug, Nobel Laureate, and the Klug family for their support and the financial contribution of the Adam Klug Memorial Lecture Fund at Ben Gurion University. Other institutions that contributed to the conference were the Gianni Foundation; Bank of Israel; University of North Carolina; Department of Economics, Faculty of Social Science and

Aharon Meir Center for Banking, Bar Ilan University; Department of Economics and Faculty of Social Science, Ben-Gurion University of the Negev.

Reflecting the highly globalized nature of tastes, production, labor markets, and financial markets in today's world, Managerial Economics in a Global Economy is ideal for undergraduate and MBA courses in managerial economics. Adopting a thoroughly global perspective, this text synthesizes economic theory, decision science, and business administration studies, examining how they interact as a firm strives to reach optimal profitability and efficiency in the face of modern constraints.

balance of payments and currency exchange rate. This book brings together the many different institutions and ideas to be found under the label of 'regionalism'; it places the revival of regionalism in a broader historical perspective; it asks whether there are common factors behind the revival of regionalism in so many different parts of the world; and it analyzes the cumulative impact of different brands of regionalism on international order. Leading specialists examine recent developments in regional cooperation in different parts of the world. They take a critical look at recent trends towards the new regionalism and regionalization, assessing their origins, their present and future prospects; and their place in the evolving international order. As well as concentrating on specific regions, including Pacific-Asia, the Americas, Europe, and the Middle East, the book looks at theories of regionalism, the balance between regionalization and globalization in the world economy, the relationship between regional organizations and the United

Nations, and the relationship between the revival of regionalism and questions of identity and nationalism.
