drowning witch" (used by Frank Zappa as an album cover), "Octopus signaling for a left turn" and "Clam with buck teeth." And they were all the creation of one brilliant and unpredictable man: Roger Price. At the height of their popularity in the mid-1950s, fans enjoyed the Doodles TV show, a Doodles daily newspaper column, Doodles magazine features, Doodles cocktail napkins, even Doodles in ads for Lucky Strike cigarettes. Like hula hoops, drive-in movies and UFOs, Doodles were one of the biggest fads of the 1950s. Now Doodles make their triumphant return to delight a new generation that can

Michael Kubovy, an experimental psychologist, recounts the lively history of the invention of perspective in the fifteenth century, and shows how, as soon as the invention spread, it was used to achieve subtle and fascinating aesthetic effects. A clear presentation of the fundamental concepts of perspective and the reasons for its effectiveness, drawing on the latest laboratory research on how people perceive, leads into the development of a new theory to explain why Renaissance artists such as Leonardo and Mantegna used perspective in unorthodox ways which have

puzzled art scholars. This theory illuminates the author's broader consideration of the evolution of art: the book proposes a resolution of the debate between those who believe that the invention/discovery of perspective is a stage in the steady progress of art and those who believe that perspective is merely a conventional and arbitrary system for the representation of space.

In Things and Places, Zenon Pylyshyn argues that the process of incrementally constructing perceptual representations, solving the binding problem (determining which properties go together), and, more generally, grounding perceptual representations in experience arise from the nonconceptual capacity to pick out and keep track of a small number of sensory individuals. He proposes a mechanism in early vision that allows us to select a limited number of sensory objects, to reidentify each of them under certain conditions as the same individual seen before, and to keep track of their enduring individuality despite radical changes in their

properties -- all without the machinery of concepts, identity, and tenses. This mechanism, which he calls FINSTs (for "Fingers of Instantiation"), is responsible for our capacity to individuate and track several independently moving sensory objects -- an ability that we exercise every waking minute, and one that can be understood as fundamental to the way we see and understand the world and to our sense of space. Pylyshyn examines certain empirical phenomena of early vision in light of the FINST mechanism, including tracking and attentional selection. He argues provocatively that the initial selection of perceptual individuals is our

primary nonconceptual contact with the perceptual world (a contact that does not depend on prior encoding of any properties of the thing selected) and then draws upon a wide range of empirical data to support a radical externalist theory of spatial representation that grows out of his indexing theory.

In what is widely considered the most influential book ever written by Walter Lippmann, the late journalist and social critic provides a fundamental treatise on the nature of human information and communication. The work is divided into eight parts, covering such varied issues as stereotypes, image making, and

organized intelligence. The study begins with an analysis of "the world outside and the pictures in our heads", a leitmotif that starts with issues of censorship and privacy, speed, words, and clarity, and ends with a careful survey of the modern newspaper. Lippmann's conclusions are as meaningful in a world of television and computers as in the earlier period when newspapers were dominant. Public Opinion is of enduring significance for communications scholars, historians, sociologists, and political scientists. Copyright © Libri GmbH. All rights reserved.

Variation is a universal phenomenon

permeating language, culture, and entire worldviews. This book analyses issues related to both specific and common variations in folklore and language as signifiers of culture and worldview. The articles here are dedicated to different genres and forms, including spoken and written language, dancing and singing, and festivities, and involve different aspects of variation. Variation is conceptualised here as the main basis of folklore dynamics and a major issue of typology. A significant part of the volume is dedicated to variations of myths and motifs, creativity, intertextuality, and transmediality.
