Fundamentals of Corporate Finance, by Richard A. Brealey, Stewart C. Myers and Alan J. Marcus, has been applauded for its modern approach and interesting examples. Professors praise the authors' well-organized and thoughtful writing style and their clear and market-driven revision that is more student friendly than ever. Every chapter has been reviewed and revised to reflect the current environment in corporate finance.

This book includes selected papers from the International Conference on Data Science and Intelligent Applications (ICDSIA 2020), hosted by Gandhinagar Institute of Technology (GIT), Gujarat, India, on January 24–25, 2020. The proceedings present original and practice concerning emerging technologies in the areas of data science and intelligent applications. The conference provides a forum for researchers from academia and industry to present and share their ideas, views and results, while also helping their advancements from different viewpoints. The contributions cover a broad range of topics, including: collective intelligence, intelligent systems, IoT, fuzzy systems, Bayesian networks, ant colony optimization, data privacy and security, data wareh, natural language processing, swarm intelligence, speech processing, machine learning and deep learning, and intelligent applications and systems. Helping strengthen the links between academia and industry, the book offers a valuable resource for instructors, managers, researchers, and scientists alike.

A Corporate Professional is required to equip himself with regard to corporate compliances on day- to-day basis. There are number of compliances which are required to be complied with depending on the event , whether it is incorporation / conversion / of view but also from SEBI Regulations point of view (in case of a listed company). To assist the professional in this endeavour, this book is yet another attempt to provide all related procedures at one place along with the resolutions to make it handy and parts. Division-I contains Company Law Procedures of more than 115 events. Each procedure has been divided into following heads: - Applicable Section of the Companies Act, 2013 - Applicable Company Rule - Applicable Regulation in case of listed company (Requirements) Regulations, 2015 - Synopsis (giving background of the section of the Companies Act, 2013) - Procedure (step by step, including various Government approvals and filing of Forms, etc.) - Compliance by a listed company in accordance with S resolutions - Draft General Meeting resolutions (Special/Ordinary resolution) Division-II contains updated Company Rules as issued by the Ministry of Corporate Affairs from time to time and which are referred under various procedures of the Book.

This book describes the state of the art of tourism planning and management in national parks and protected areas. It also provides guidelines for best practice in tourism operations. Other objectives are to: Describe case studies and guidelines that contribute to conservation of biological diversity; consider the role of local communities within or near these areas; outline the development of tourism infrastructure and services; discuss visitor management; provide guidelines to enhance the quality of the tourism experience. The focus is global and the book will appeal to both academics and practitioners.

This volume represents the proceedings of the Ninth Annual MaxEnt Workshop, held at Dartmouth College in Hanover, New Hampshire, on August 14-18, 1989. These annual meetings are devoted to the theory and practice of Bayesian Probability and the Maximum Entropy Formalism. The fields of application exemplified at MaxEnt '89 are as diverse as the foundations of probability theory and atmospheric carbon variations, the 1987 Supernova and fundamental quantum mechanics. Subjects include sea floor drug absorption in man, pressures, neutron scattering, plasma equilibrium, nuclear magnetic resonance, radar and astrophysical image reconstruction, mass spectrometry, generalized parameter estimation, delay estimation, pattern recognition, heave responses in underwater sound and many others. The first ten papers are on probability theory, and are grouped together beginning with the most abstract followed by those on applications. The tenth paper involves both Bayesian and MaxEnt methods and serves as a bridge to the remaining papers which are devoted to Maximum Entropy theory and practice. Once again, an attempt has been made to start with the more theoretical papers and to follow them with more and more practical applications. Papers number 29, 30 and 31, by Kesaven, Seth and Kapur, represent a somewhat different, perhaps even "unorthodox" viewpoint, and are included here even though the editor and, indeed many in the audience at Dartmouth, disagreed with their content. I feel that scientific disagreements are essential in any developing field, and often lead to a deeper understanding.

South Korea's amazing rise from the ashes: the inside story of an economic, political, and cultural phenomenon Long overshadowed by Japan and China, South Korea is a small country that happens to be one of the great national success stories of the postwar period. From a failed state with no democratic tradition, ruined and partitioned by war, and sapped by a half-century of colonial rule, South Korea transformed itself in just fifty years into an economic powerhouse and a democracy that serves as a model for other countries. With no natural resources and a tradition of authoritarian rule, Korea managed to accomplish a second Asian miracle. Daniel Tudor is a journalist who has lived in and written about Korea for almost a decade. In *Korea: The Impossible Country*, Tudor examines Korea's cultural foundations; the Korean character; the public sphere in politics, business, and the workplace as well as the family, dating, and marriage. In doing so, he touches on topics as diverse as shamanism, clan-ism, the dilemma posed by North Korea, the myths about doing business in Korea, the Koreans' renowned hard-partying ethos, and why the infatuation with learning English is now causing massive social problems. South Korea has undergone two miracles at once: economic development and complete democratization. The question now is, will it become as some see Japan, a prosperous yet aging society, devoid of energy and momentum? Or will the dynamism of Korean society and its willingness to change—as well as the opportunity it has now to welcome outsiders into its fold—enable it to experience a third miracle that will propel it into the ranks of the world's leading nations regarding human culture, democracy, and wealth? More than just one journalist's account, *Korea: The Impossible Country* also draws on interviews with many of the people who made South Korea what it is today. These include: Choi Min-sik, the star of "Old Boy." Park Won-soon, Mayor of Seoul. Soyeon Yi, Korea's first astronaut Hong Myung-bo, legendary captain of Korea's 2002 FIFA World Cup team. Shin Joong-hyun, the 'Godfather of Korean Rock.' Ko Un, poet. Hong Seok-cheon, restaurateur, and the first Korean celebrity to 'come out.' And many more, including a former advisor to President Park Chung-hee; a Shaman priestess ('mudang'); the boss of Korea's largest matchmaking agency; a 'room salon' hostess; an architect; as well as chefs, musicians, academics, entrepreneurs, homemakers, and chaebol conglomerate employees.

As people increasingly migrate to urban settings and more than half of the world's population now lives in cities, it is vital to plan and provide for sustainable and resilient food systems which reflect this challenge. This volume presents experience and evidence-based "state of the art" chapters on the key dimensions of urban food challenges and types of intra- and peri-urban agriculture. The book provides urban planners, local policy makers and urban development practitioners with an overview of crucial aspects of urban food systems based on an up to date review of research results and practical experiences in both developed and developing countries. By doing so, the international team of authors provides a balanced textbook for students of the growing number of courses on sustainable agriculture, food and urban studies, as well as a solid basis for well-informed policy making, planning and implementation regarding the development of sustainable, resilient and just urban food systems.

For every fan of K-Pop music, Korean Wave dramas and Kimchi—or anyone intrigued by Korea and Korean culture—A Geek in Korea is a hip, new guide to the land of the Samsung smartphone and Gangnam Style. Author Dan Tudor first arrived in Korea on the eve of the 2002 World Cup when South Korea played Italy in the finals. What he saw inspired him to return and work in Korea. He served as The Economist magazine's Korea correspondent for three years, and he writes regular columns for the national daily Joongang Ilbo newspaper. Along the way, he has developed a great love and admiration for Korean culture and the Korean people. A Geek in Korea reinvents the culture guide for the Internet age. Packed with articles and photographs, it covers all the touchstones of Korean culture—from Buddhism and Confucianism to chapters on the traditional arts and disciplines like Taekwondo. There are chapters on cultural code words and norms; personal relationships; business and technology; and symbols and practices that are peculiarly Korean. A number of chapters are devoted to Korean pop culture, with attention to the stars, idols, and urban subcultures associated with them. For visitors to Korea, the author includes a mini-guide to his favorite neighborhoods in Seoul and other places of outstanding interest. Spotlighting the originality and creativity of the Koreans, debunking myths about them, and answering nagging questions like why they're so obsessed with education and success—Tudor has created the perfect book for the growing ranks of Koreaphiles in this inspired, insightful, and highly informative guide.

The World Intellectual Property Report 2017 examines the crucial role of intangibles such as technology, design and branding in international manufacturing. Macroeconomic analysis is complemented by case studies of the global value chains for three products - coffee, photovoltaic energy cells and smartphones - to give an insightful picture of the importance of intellectual property and other intangibles in modern production.

100 Great Poets provides a concise but comprehensive overview of the poetic tradition in English. Chronologically arranged, the book presents the major poets from Beowulf to the present with representative examples from each author. The headnotes and selections reflect the high notes of each poet's career—the classic poems that have earned an enduring place in the canon of English language literature.

This book is a collection of peer-reviewed best selected research papers presented at 3rd International Conference on Computer Networks and Inventive Communication Technologies (ICCNCT 2020). The book covers new results in theory, methodology, and applications of computer networks and data communications. It includes original papers on computer networks, network protocols and wireless networks, data communication technologies, and network security. The proceedings of this conference is a valuable resource, dealing with both the important core and the specialized issues in the areas of next generation wireless network design, control, and management, as well as in the areas of protection, assurance, and trust in information security practice. It is a reference for researchers, instructors, students, scientists, engineers, managers, and industry practitioners for advance work in the area.

Did you know that Abraham Lincoln and Muhammad Ali both consumed bee pollen to boost energy, or that beekeepers in nineteenth-century Europe viewed their bees as part of the family? Or that after man, the honeybee, *Apis mellifera*, is the most studied creature on the planet? And that throughout history, honey has been highly valued by the ancient Egyptians (the first known beekeepers), the Greeks, and European monarchs, as well as Winnie the Pooh? In *Sweetness and Light*, Hattie Ellis leads us into the hive, revealing the fascinating story of bees and honey from the Stone Age to the present, from Nepalese honey hunters to urban hives on the rooftops of New York City. Uncovering the secrets of the honeybee one by one, Ellis shows how this small insect, with a collective significance so much greater than its individual size, can carry us through past and present to tell us more about ourselves than any other living creature.

This book includes the proceedings of the 15th International Conference on Complex, Intelligent, and Software Intensive Systems, which took place in Asan, Korea, on July 1-3, 2021. Software intensive systems are systems, which heavily interact with other systems, sensors, actuators, devices, and other software systems and users. More and more domains are involved with software intensive systems, e.g., automotive, telecommunication systems, embedded systems in general, industrial automation systems, and business applications. Moreover, the outcome of web services delivers a new platform for enabling software intensive systems. Complex systems research is focused on the overall understanding of systems rather than its components. Complex systems are very much characterized by the changing environments in which they act by their multiple internal and external interactions. They evolve and adapt through internal and external dynamic interactions. The development of intelligent systems and agents, which is each time more characterized by the use of ontologies and their logical foundations build a fruitful impulse for both software intensive systems and complex systems. Recent research in the field of intelligent systems, robotics, neuroscience, artificial intelligence, and cognitive sciences is very important factor for the future development and innovation of software intensive and complex systems. The aim of the book is to deliver a platform of scientific interaction between the three interwoven challenging areas of research and development of future ICT-enabled applications: Software intensive systems, complex systems, and intelligent systems.

This book examines the need for a new way of describing sustainable tourism and also looks at the frameworks needed to rethink how to apply this to communities, private operators and protected area managers. It makes it clear that tourism is just one of many human activities that affects host communities. The work includes informative and provocative case studies with realistic applications. References included in the book will help graduate students formulate new hypotheses and suggest literature for them. Tools and techniques useful to tourism practitioners suggest innovative approaches to marketing, management and community development.

Modern Auditing & Assurance Services, 6th edition, is written for courses in auditing and assurance at undergraduate, postgraduate and professional levels. The practice of auditing is explained in the context of auditing theory, concepts and current practice, with appropriate reference to the Australian auditing standards and the respective international standards on auditing. Auditors play a vital role in the current economic environment, with increasing responsibility for ensuring market integrity. The development of auditing practice reflects how the accounting profession responds to the complex demands of information, competition, corporate failures and technology. Auditing continues to evolve in response to the changing business and regulatory landscape to maintain its relevance and importance. This book is a comprehensive guide to the development and practice of audits of a financial report, with an authoritative insight into the fundamental role of auditors, the influences on audits, and related issues.

This two-volume set (LNAI 10448 and LNAI 10449) constitutes the refereed proceedings of the 9th International Conference on Collective Intelligence, ICCCI 2017, held in Nicosia, Cyprus, in September 2017. The 117 full papers presented were carefully reviewed and selected from 248 submissions. The conference focuseson the methodology and applications of computational collective intelligence, included: multi-agent systems, knowledge engineering and semantic web, social networks and recommender systems, text processing and information retrieval, data mining methods and applications, sensor networks and internet of things, decision support & control systems, and computer vision techniques.

Reframing Sustainable Tourism

The charm of Mathematical Physics resides in the conceptual difficulty of understanding why the language of Mathematics is so appropriate to formulate the laws of Physics and to make precise predictions. Citing Eugene Wigner, this "unreasonable appropriateness of Mathematics Sciences" emerged soon at the beginning of the scientific thought and was splendidly depicted by the words of Galileo: "The grand book, the Universe, is written in the language of Mathematics." In this marriage, what Bertrand Russell called the supreme beauty, cold and austere, complements the supreme beauty, warm and engaging, of Physics. This book, which consists of nine articles, gives a flavor of these beauties and covers an ample range of mathematical subjects that play a relevant role in the study of physics and engineering. This range includes the probability measures associated with p-adic number fields, non-commutative measures of quantum discord, non-linear Schrödinger equation analysis, spectral operators related to holomorphic extensions of series expansions, Gibbs phenomenon, deformed wave equation analysis, and methods in the numerical study of material properties.

A Precarious Game is an ethnographic examination of video game production. The developers that Ergin Bulut researched for almost three years in a medium-sized studio in the U.S. loved making video games that millions play. Only some, however, can enjoy this dream job, which can be alienating for many others. That is, the passion of a predominantly white-male labor force relies on material inequalities involving the sacrificial labor of their families, unacknowledged work of precarious testers, and thousands of racialized and gendered workers in the Global South. Game explores the politics of doing what one loves. In the context of work, passion and love imply freedom, participation, and choice, but in fact they accelerate self-exploitation and can impose emotional toxicity on other workers by forcing them to work endless hours. Bulut argues that discourses in the game industry disguise the racialized and gendered inequalities on which a profitable transnational industry thrives. Within capitalism, work is not just an economic matter, and the political nature of employment and love can still be undemocratic even when based on As Bulut demonstrates, rather than considering work simply as a matter of economics based on trade-offs in the workplace, we should consider the question of work and love as one of democracy rooted in politics.

Winner of the first Paul A. Baran-Paul M. Sweezy Memorial Award for an original monograph concerned with the political economy of imperialism, John Smith's Imperialism in the Twenty-First Century is a seminal examination of the relationship between the core capitalist countries and the rest of the world in the age of neoliberal globalization. Deploying a sophisticated Marxist methodology, Smith begins by tracing the production of certain iconic commodities—the T-shirt, the cup of coffee, and the iPhone—and demonstrates how these generate enormous outflows of money from the countries of the Global South to transnational corporations headquartered in the core capitalist nations of the Global North. From there, Smith draws on his empirical findings to powerfully theorize the current shape of imperialism. He argues that the core capitalist countries need no longer rely on military force and colonialism (although these still occur) but increasingly are able to extract profits from workers in the Global South through market mechanisms and, by aggressively favoring places with lower wages, the phenomenon of labor arbitrage. Meticulously researched and forcefully argued, Imperialism in the Twenty-First Century is a major contribution to the theorization and critique of global capitalism.

"Industrial Maintenance and Mechatronics provides support for an Industrial Technology Maintenance (ITM) program. It covers the principal industrial technology disciplines, with a focus on electrical systems and electronic controls. It provides students with the necessary knowledge for entry-level positions in industrial maintenance and prepares them for NIMS Level 1 credentialing"--

This book gathers selected high-quality research papers presented at the Fifth International Congress on Information and Communication Technology, held at Brunel University, London, on February 20–21, 2020. It discusses emerging topics pertaining to information and communication technology (ICT) for managerial applications, e-governance, e-agriculture, e-education and computing technologies, the Internet of Things (IoT) and e-mining. Written by respected experts and researchers working on ICT, the book offers a valuable asset for young researchers involved in advanced studies.

Macro economics examines the events and forces that effects one's economy but which originates from outside of one's defined geo-economic area. Macro events may be financial events such as the faltering of an economy of another country as well as non financial events such as the effects on a societies economy as a result of a major nature event such as a flood or earthquake. A chart would help outline the key factors in a macro economic society.

Environmental Economics in Theory and Practice provides a thorough and coherent review and discussion of environmental economics. It is a guide to the most important areas of natural resource and environmental economics, including the economics of non-renewable and renewable resource extraction, the economics of pollution control, the application of cost-benefit analysis to the environment, and the economics of sustainable development. The book concentrates on key elements of economic theory, and shows how they can be applied to real-world problems. Particular emphasis is placed on analyzing recent empirical studies from all over the world along with in-depth coverage of various economic models.

Each chapter develops the main theoretical results and recent analytic techniques necessary for understanding applications. Throughout the book, results are presented in words, graphs, and mathematical models; brief technical notes inform readers about optimal control theory, the Kuhn-Tucker conditions, game theory, and linear programming. Moving through the laws of thermodynamics to an analysis of market failure, the book turns to the economics of natural resources and pollution control. It concludes with an examination of environmental cost-benefit analysis and sustainable development. A comprehensive text, it is particularly suitable for use in advanced undergraduate and graduate courses in environmental and resource economics. Because of up-to-date coverage, it will also be of interest to professionals working in resource and environmental economics.
