Using an introduction to mythology by the master storyteller Ovid himself, the authors have prepared a unique teaching tool designed to achieve proficiency at Latin in one year at the college level, two years at the high school or intermediate level. The volume provides students with imaginative, connected reading, beginning with introductory prose versions of Ovid's simple myth tales and progressing to the rich poetry of Ovidian Latin (with appropriate teaching aids) within forty lessons. The grammatical approach is traditional, but the central emphasis is on reading. In each chapter the reading appears first, followed by the vocabulary, the grammar, exercises, and

etymology relating to the vocabulary. The exercises begin with a group of questions in Latin (based on the reading), to be answered in Latin. Each tale is preceded by a brief discussion in English of the story and its mythological significance. The myths retold by Ovid and the attractive format are conceived to impel the student into acquiring the skill to read the author in the original language. This volume assembles papers commissioned by the National Research Council's Board on Science, Technology, and Economic Policy (STEP) to inform judgments about the significant institutional and policy changes in the patent system made over the past two decades. The chapters fall into three areas. The first four chapters consider the determinants and effects of changes in patent "quality." Quality refers to whether patents issued by the U.S. Patent and Trademark Office (USPTO) meet the statutory

standards of patentability, including novelty, nonobviousness, and utility. The fifth and sixth chapters consider the growth in patent litigation, which may itself be a function of changes in the quality of contested patents. The final three chapters explore controversies associated with the extension of patents into new domains of technology, including biomedicine, software, and business methods.

Several current examples of sui generis intellectual property rights are then described. A "no action" scenario is also examined, emphasizing that the rapid changes occurring in biotechnology might ultimately make the current problem obsolete. Finally, broader issues such as the growing secrecy in basic science are acknowledged, and linked to the disappearance of a clear distinction between basic and applied research.

fundamental rights approach to constitutional law, are based on the belief that the identification of the correct social goals or values is the key to describing or prescribing law and public policy outcomes. In this book, Neil Komesar argues that this emphasis on goal choice ignores an essential element—institutional choice. Indeed, as important as determining our social goals is deciding which institution is best equipped to implement them—the market, the political process, or the adjudicative

process. Pointing out that all three institutions are massive, complex, and imperfect, Komesar develops a strategy for comparative institutional analysis that assesses variations in institutional ability. He then powerfully demonstrates the value of this analytical framework by using it to examine important contemporary issues ranging from tort reform to constitution-making.
