It's an awful story. It's an awful story. Why do you want to bring this up now?--Chief Awusa of Atorkor For centuries, the story of the Atlantic slave trade has been filtered through the eyes and records of white Europeans. In this watershed book, historian Anne C. Bailey focuses on memories of the trade from the African perspective. African chiefs and other elders in an area of southeastern Ghana-once famously called "the Old Slave Coast"-share stories that reveal that Africans were traders as well as victims of the trade. Bailey argues that, like victims of trauma, many African societies now experience a fragmented view of their past that partially explains the blanket of silence and shame around the slave trade. Capturing scores of oral histories that were handed down through generations, Bailey finds that, although Africans were not equal partners with Europeans, even their partial involvement in the slave trade had devastating consequences on their history and identity. In this unprecedented and revelatory book, Bailey explores the delicate and fragmented nature of historical memory. From the Trade Paperback edition.

"Presents ancient and neo-Latin language phrases and conversations on a variety of topics. Includes pronunciation guide, bibliography, and English to Latin vocabulary. Expanded and enlarged from the 3rd edition (2003)"--Provided by publisher.

Libellvs Sodalitatis: Hoc Est, Christianarvm Institutio[n]vm libri quinque

Uralic and Altaic Series

In 1987, our first book Acupuncture: Textbook and Atlas received rave reviews (e.g., in New England Journal of Medicine). This prompted us to write this smaller, affordable version in order to reach a wider audience. The smaller format has been so successful that we are now into our fourth revised edition. This has given us the opportunity to update and improve the book. For example, nu merous new references to scientific advances have been added. Also the section on traditional Chinese medicine (TCM) was ad ded because it gives a more complete picture of the current prac tice of acupuncture. Acupuncture has come a long way since our first book in 1987. There has been a surge of interest in treating drug addictions by ear acupuncture in 450 centers world wide. The treatment of nau sea and vomiting has been so well tested (scientifically) that the FDA (USA) is considering making this the major indication for acupuncture in America. Research into its efficacy for neurologi cal and pulmonary diseases is also gaining credibility. No longer is chronic pain the only scientifically acceptable use for acupuncture (based on the endorphin mechanism).

I have written Life Stories virtually in the space of one breath ?these stories have been imagined in such concentration, that I had to free myself from them. They came so naturally, that I am very happy to have returned to the short-story format. It seems to me that in these eight stories each individual and different life is so strikingly intense that it was not possible to place all into one novel ?Also in terms of style, I searched and found a different approach to each of the stories. I wanted to express myself more clearly and more simply. ?Nora Ikstena

Inclusive Green Growth: The Pathway to Sustainable Development makes the case that greening growth is necessary, efficient, and affordable. Yet spurring growth without ensuring equity will thwart efforts to reduce poverty and improve access to health, education, and infrastructure services.

Six months after Dracula dies, a ghostly vision informs the Harkers that their work is not yet done - and the Count's last surviving bride returns to London to gain revenge - and use their unborn baby as a new host for Dracula! Featuring all the major character from the original - alive AND dead!

Open-Channel Hydraulics, originally published in 1959, deals with the design for flow in open channels and their related structures. Covering both theory and practice, it attempts to bridge the gap that generally exists between the two. Theory is introduced first and is then applied to design problems. In many cases the application of theory is illustrated with practical examples. Theory is frequently simplified by adopting theoretically less rigorous treatments with sound concepts, by avoiding use of advanced mathematical manipulations, or by replacing such manipulations with practical numerical procedures. To facilitate understanding of the subject matter, the treatment is mostly based on the condition of one- or two-dimensional flow. The book deals mainly with American practice but also includes related information from many countries throughout the world. Material is divided into five main sections for an orderly and logical treatment of the subject: Basic Principles. Uniform Flow, Varied Flow, Rapidly Varied Flow, and Unsteady Flow. There are 67 illustrative examples, 282 illustrations, 319 problems, and 810 references.

This classic textbook was the first English-language book on the subject in two decades. Open-Channel Hydraulics is a valuable text for students of engineering mechanics. hydraulics. civil. agricultural. sanitary. and mechanical engineering, and a helpful compendium for practicing engineers. Dr. Ven Te Chow was a Professor of Hydraulic Engineering and led the hydraulic engineering research and teaching programs at the University of Illinois. Through many years of experience as a teacher, engineer, researcher, writer, lecturer, and consultant, he became an internationally recognized leader in the fields of hydraulics, hydrology and hydraulic engineering. Dr. Ven Te Chow authored two technical books and more than 60 articles and papers in scientific an engineering magazines and journals. He was a member of IAHR, ASCE, AGU, AAAS, SEE, and Sigma Xi, and had been Chairman of the American Geophysical Union's Permanent Research Committee on Runoff.

Aging, Health and Technology takes a problem-centered approach to examine how older adults use technology for health. It examines the many ways in which technology is being used by older adults, focusing on challenges, solutions and perspectives of the older user. Using aging-health technology as a lens, the book examines issues of technology adoption, basic human factors, cognitive aging, mental health, aging and usability, privacy, trust and automation. Each chapter takes a case study approach to summarize lessons learned from unique examples that can be applied to similar projects, while also providing general information about older adults and technology. Discusses human factors design challenges specific to older adults Covers the wide range of health-related uses for technology—from fitness to leading a more engaged life Utilizes a case study approach for practical application Envisions what the future will hold for technology and older adults Employs a roster of interdisciplinary contributors

From GPO Bookstore's Website: Authors with diverse backgrounds in science, history, anthropology, and more, consider culture in the context of the cosmos. How does our knowledge of cosmic evolution affect terrestrial culture? Conversely, how does our knowledge of cultural evolution affect our thinking about possible cultures in the cosmos? Are life, mind, and culture of fundamental significance to the grand story of the cosmos that has generated its own self-understanding through science, rational reasoning, and mathematics? Book includes bibliographical references and an index.
