This study chronicles the success of the Japanese car in America. Starting with Japan’s first gasoline-powered car, the Takuri, it examines early Japanese inventors and automotive conditions in Japan; the arrival of Japanese cars in California in the late 1950s; consumer and media reactions to Japanese manufacturers; what obstacles they faced; initial sales; and how the cars gained popularity through shrewd marketing. Toyota, Honda, Datsun (Nissan), Mazda, Subaru, Isuzu, and Mitsubishi are profiled individually from their origins through the present. An examination follows of the forced cooperation between American and Japanese manufacturers, the present state of the industry in America, and the possible future of this union, most importantly in the race for a more environmentally-sound vehicle.

The Toyota Way Fieldbook is a companion to the international bestseller The Toyota Way. Energy and Sustainability V is the proceedings of the 5th International Conference on Energy and Sustainability, held by the Wessex Institute of Technology. The modern world is highly dependent on the exploitation of fossil fuels. More recently, resources depletion and severe environmental effects deriving from the continuous use of these fuels has resulted in an increasing amount of interest in renewable energy resources and the search for sustainable energy policies. The changes required to progress from an economy mainly based on hydrocarbons to one taking advantage of sustainable energy resources are massive and require considerable scientific research as well as engineering systems. The effect also involves collaboration between different disciplines in order to arrive at optimum solutions, including buildings, energy networks, convenience systems, new energy storage solutions, waste to energy technologies, and many others. This book covers topics related to sustainability in energy and power production, storage, distribution and management. These include: Smart grids; Smart metering; Green ICT; Green buildings; Energy storage; Renewable energy resources; Plug-in Hybrid Vehicles (PHEV); Biofuels (solid, liquid, gas); Waste to energy; CO2 capturing and management; Energy and transportation; Environmental risk; Energy policies; Greener power plant technologies; Hydrogen recovery techniques; Sustainable energy production.

Energy is essential to all human activities as well as critical to social and economic development. Sustainable energy planning encompassing the concept of smart cities has a high potential to significantly contribute to climate change mitigation. For improved energy efficiency, it is essential to find low carbon solutions for the urban environment. The integration and management of energy supply with predominant exploitation of local resources is examined through the fundamental concept of exergy. This book can assist in decision making, with regard to sustainable energy design both at a national and local level.

The Toyota Way Fieldbook

This book addresses the intersection of entrepreneurship, innovation and sustainability (EIS), presenting high-quality research illuminating the relationship between the three fields. The EIS nexus is particularly relevant from a European point of view given the focus of the European Commission on corporate social responsibility (CSR) and sustainability, as well as their prominent role within the European Union in general. Also, the rapid economic growth witnessed especially in the BRIC countries in recent years requires that firms reconcile sustainability aspects with profitability and innovation, and entrepreneurs are seen as key diffusers of these aims. Sustainability requires both radical and incremental innovation at many different levels (technology, product, process, system). In many cases, such innovations come from small and medium-sized enterprises and so the role of the entrepreneur is key to their success. The book is split into six sections. The first section examines the nexus in detail focusing on system-oriented connectivity between sustainability, innovation and entrepreneurship. The second section looks at how to nurture corporate entrepreneurship for sustainability; and the third considers "mature" industries such as automotives, chemicals and electronics and how sustainability aspects can be integrated into innovation process and strategy. The fourth section examines the nexus through the lens of developing countries in Africa. Sustainable entrepreneurship is identified as a hugely beneficial way to foster development. The fifth section of the book concentrates on SMEs; and finally the EIS nexus is approached from a network perspective and focuses on inter-organisational partnerships, which are often an important facilitator or spark for EIS initiatives.This book will prove to be essential for researchers in the EIS nexus and be of invaluable help to practitioners, governments and inter-governmental bodies attempting to encourage sustainable entrepreneurship and innovation. The Kenya Gazette is an official publication of the government of the Republic of Kenya. It contains notices of new legislation, notices required to be published by law or policy as well as other announcements that are published for general public information. It is published every week, usually on Friday, with occasional releases of special or supplementary editions within the week.
