If you want to help people learn from activities, exercises or experiences, this book is for you. This book fills a gap; it is the gap between doing an activity and learning from it. Plenty of books describe activities that are good for icebreaking, for team-building, for project management or for cross-cultural understanding, etc. A few of these books do give advice about reviewing (or debriefing) the activities, and 90% of the times it reads: "Here are some questions you can ask …". How's that for boring and/or limiting? The result of such advice is that reviews are often dull and they dwell on what went wrong. When reading, they give off a feeling of discomfort. But why is that? Well, one of the reasons is because the same people speak up all the time. And that bores and might even annoy the rest of the participants. Thus, reviewing gets a bad name and people just want the review to finish as quickly as possible so that they can get on with the next activity. This is a rare book for two reasons: It is about reviewing (How many books have you come across on this subject?) It is about reviewing actively.(Which makes it not just rare, but unique.) With the help of this book, you can make reviews at least as engaging as the activities you are reviewing. No more discomfort. No more unwanted silences. No more superficial reviews. Just engaging and practical ways to help people learn from experience! How does that sound for a change?

Comprehensive Healthcare Simulation: Surgery and Surgical Subspecialties

This book is a concise manual on debriefing techniques in a clinical educational context. It presents the most popular debriefing techniques and, hence, can be used as a reference manual by educators to help them achieve their intended debriefing objectives. The overarching objective of debriefing is to promote reflection and improve patient safety awareness at an individual and a team level. This book provides clear explanations of what constitutes a valuable and effective debriefing, and presents the various approaches that can be used and how debriefing differs from feedback. It includes key recommendations on aspects that directly or indirectly impact debriefing with different populations of learners such as students or qualified healthcare professionals of various levels of seniority. This book can also be used as a survival guide for both simulation educators and clinicians during debriefings. It includes several useful sections explaining the different phases of a debriefing session, which help learners develop and consolidate their knowledge, and identify potential knowledge or performance gaps and near misses. The underlying philosophy of this book is to also promote profound respect for the trainee by using a non-offensive debriefing approach. Debriefing facilitators will appreciate the several key sentences that will help them lead and engage their learners in the various phases of expressing their emotions and analyzing their experience and actions.

The new edition of Crew Resource Management continues to focus on CRM in the cockpit, but also emphasizes that the concepts and training applications provide generic guidance and lessons learned for a wide variety of "crews" in the aviation system as well as in the complex and high-risk operations of many non-aviation settings. Long considered the "bible" in this field, much of the basic style and structure of the previous edition of Crew Resource Management is retained in the new edition. Textbooks are often heavily supplemented with or replaced entirely by course packs in advanced courses in the aviation field, as it is essential to provide students with cutting edge information from academic researchers, government agencies (FAA), pilot associations, and technology (Boeing, ALION). This edited textbook offers ideal coverage with first-hand information from each of these perspectives. Case examples, which are particularly important given the dangers inherent in real world aviation scenarios, are liberally supplied. An image collection and test bank make this the only text on the market with ancillary support. New material includes: international and cultural aspects of CRM; design and implementation of Line-Oriented Flight Training (LOFT); airline applications beyond the cockpit; spaceflight resource management; non-aviation applications; AQP; LOSA; and special issues pertaining to low-cost airline carriers. The second edition editors offer essential breath of experience in aviation human factors from multiple perspectives (academia, government, and private enterprise) and the contributors have all been chosen as experts in their fields who represent the diversity of the research of activities and organisational experience of CRM. The only CRM text on the market offering an up-to-date synthesis of primary source material New edition thoroughly updated and revised to include major new findings, complete with discussion of the international and cultural aspects of CRM, the design and implementation of LOFT Instructor website with testbank and image collection Liberal use of case examples

SIOP has more than 7,000 members.

Practising fundamental patient care skills and techniques is essential to the development of trainees' wider competencies in all medical specialties. After the success of simulation learning techniques used in other industries, such as aviation, this approach has been adopted into medical education. This book assists novice and experienced teachers in each of these fields to develop a teaching framework that incorporates simulation. The Manual of Simulation in Healthcare, Second Edition is fully revised and updated. New material includes a greater emphasis on patient safety, interprofessional education, and a more descriptive illustration of simulation in the areas of education, acute care medicine, and aviation. Divided into three sections, it ranges from the logistics of establishing a simulation and skills centre and the inherent problems with funding, equipment, staffing, and course development to the considerations for healthcare-centred simulation within medical education and the steps required to develop courses that comply with 'best practice' in medical education. Providing an in-depth understanding of how medical educators can best incorporate simulation teaching methodologies into their curricula, this book is an invaluable resource to teachers across all medical specialties.

Extracorporeal membrane oxygenation (ECMO) has evolved into an exciting and valuable tool to assist in the management of patients experiencing cardiogenic shock, severe acute respiratory failure, or often a combination of both. While outcomes remain less than ideal, they continue to improve with team experience, better patient selection, and a growing understanding of the nuances of managing patients who require mechanical circulatory support. Patients requiring ECMO are often extremely sick and have complex problems - initiating therapy before the development of end-organ damage is critical. Without doubt, teamwork, guidelines, and protocols are cornerstone concepts for clinical and program success - all topics that are emphasized in this text. The goals of this text are to further outline topics that help address some of the key challenges providers face when considering and applying extracorporeal support therapies to the evolving spectrum of acutely ill patients.

This first volume to analyze the science of meetings offers a unique perspective on an integral part of contemporary work life. More than just a tool for improving individual and organizational effectiveness and well-being, meetings provide a window into the very essence of organizations and employees' experiences with the organization. The average employee attends at least three meetings per week and managers spend the majority of their time in meetings. Meetings can raise individuals, teams, and organizations to tremendous levels of achievement. However, they can also undermine effectiveness and well-being. The Cambridge Handbook of Meeting Science assembles leading authors in industrial and organizational psychology, management, marketing, organizational behavior, anthropology, sociology, and communication to explore the meeting itself, including

pre-meeting activities and post-meeting activities. It provides a comprehensive overview of research in the field and will serve as an invaluable starting point for scholars who seek to understand and improve meetings.

Over the past two decades, violent crime has become one of the most serious domestic problems in the United States. Approximately 13 million people (nearly 5% of the U.S. population) are victims of crime every year, and of that, approximately one and a half million are victims of violent crime. Ensuring quality of life for victims of crime is therefore a major challenge facing policy makers and mental health providers. Helping Victims of Violent Crime grounds victim assistance treatments in a victim-centered and strengths perspective. The book explores victim assistance through systems theory: the holistic notion of examining the client in his/her environment and a key theoretical underpinning of social work practice. The basic assumption of systems theoryis homeostasis. A crime event causes a change in homeostasis and often results in disequilibrium. The victim's focus at this point is to regain equilibrium. Under the systems metatheory, coping, crisis and attribution theories provide a good framework for victim-centered intervention. Stress and coping theories posit that three factors determine the state of balance: perception of the event, available situational support, and coping mechanisms. Crisis theory offers a framework to understand a victim's response to a crime. The basic assumption of crisis theory asserts that when a crisis occurs, people respond with a fairly predictable physical and emotional pattern. The intensity and manifestation of this pattern may vary from individual to individual. Finally, attribution theory asserts that individuals make cognitive appraisals of a stressful situation in both positive and negative ways. These appraisals are based on the individual's assertion that they can understand, predict, and control circumstances and result in the victim's assignment of responsibility for solving or helping with problems that have arisen from the crime event. In summary, these four theories can delineate a definitive model for approach to the victimization process. It is from this theoretical framework that Treating Victims of Violent Crime offers assessments and interventions with a fuller understanding of the victimization recovery process. The book includes analysis of victims of family violence (child abuse, elder abuse, partner violence) as well as stranger violence (sexual assault, homicide, and terrorism).

Communication research is evolving and changing in a world of online journals, open-access, and new ways of obtaining data and conducting experiments via the Internet. Although there are generic encyclopedias describing basic social science research methodologies in general, until now there has been no comprehensive A-to-Z reference work exploring methods specific to communication and media studies. Our entries, authored by key figures in the field, focus on special considerations when applied specifically to communication research, accompanied by engaging examples from the literature of communication, journalism, and media studies. Entries cover every step of the research process, from the creative development of research topics and questions to literature reviews, selection of best methods (whether quantitative, qualitative, or mixed) for analyzing research results and publishing research findings, whether in traditional media or via new media outlets. In addition to expected entries covering the basics of theories and methods traditionally used in communication research, other entries discuss important trends influencing the future of that research, including contemporary practical issues students will face in communication professions, the influences of globalization on research, use of new recording technologies in fieldwork, and the challenges and opportunities related to studying online multi-media environments. Email, texting, cellphone video, and blogging are shown not only as topics of research but also as means of collecting and analyzing data. Still other entries delve into considerations of accountability, copyright, confidentiality, data ownership and security, privacy, and other aspects of conducting an ethical research program. Features: 652 signed entries are contained in an authoritative work spanning four volumes available in choice of electronic or print formats. Although organized A-to-Z, front matter includes a Reader's Guide grouping entries thematically to help students interested in a specific aspect of communication research to more easily locate directly related entries. Back matter includes a Chronology of the development of the field of communication research; a Resource Guide to classic books, journals, and associations; a Glossary introducing the terminology of the field; and a detailed Index. Entries conclude with References/Further Readings and Cross-References to related entries to guide students further in their research journeys. The Index, Reader's Guide themes, and Cross-References combine to provide robust search-and-browse in the e-version.

Every day, both adults and children are victimized in unhealthy relationships. Domestic and child abuse have surged during the COVID-19 pandemic as potential escapes from abuse at home were stripped away. Abuse is a raging global issue; however, with enough research, policy, and social activism, society can aid in the prevention of child and domestic abuse. The Research Anthology on Child and Domestic Abuse and Its Prevention discusses the prevalence of domestic abuse as well as the exploitation of children both at home and beyond. It further presents emerging practices in technology, social work, and criminology to prevent the further exploitation and victimization of adults and children in abusive situations. Covering topics such as foster children, gender-based violence, and trauma analysis, this major reference work is an indispensable resource for social workers, lawmakers, government organizations, non-profit organizations, psychologists, therapists, sociologists, libraries, students and educators of higher education, criminologists, leaders in law enforcement, researchers, and academicians.

An instructional activity is educational only when students understand its meaning and apply their understanding to future situations. Outdoor educators seek to improve teaching and learning through direct experience but, if such experiences are to be meaningful and applied to life situations, teachers must help students learn from carefully planned and guided reflection sessions. This guidebook deals with the theory and practice of reflecting upon experiences, using examples from outdoor education. Chapter 1 discusses common uses of reflection in everyday life; findings of cognitive research related to reflection and experiential learning; six scenarios illustrating classroom uses of reflection; definitions of reflection, knowing, thinking, and learning; types of knowledge and the relationships among them; and contributions of Socrates, Dewey, Piaget, and Vygotsky on the educational value of reflection in a group setting. Chapter 2 describes how to lead a reflection session, focusing on planning, teacher facilitation skills, educational objectives, and developing a supportive climate in a caring community of learners. Other chapters outline questioning strategies and techniques, describe alternate reflection activities, and list questions for teacher reflection on this guidebook. This booklet contains 53 references. Appendices list various types of reflective and evaluative questions, and 47 additional resources: organizations, networks, colleges, books, and bibliographies.
