**The history of electronics can be traced back to 1874 when Irish scientist George Johnstone Stoney (1826-1911) suggested that electricity must be "built" out of tiny electrical charges. Twenty years later, he coined the name "electron". Interest in electronics gradually increased over the decades following Stoney's discovery. In 1947 the transistor was invented by William Shockley, John Bardeen and Walter Brattain at Bell Labs, which revolutionized the computer industry by replacing fragile, power hungry valves with much smaller and reliable devices. During the 1950s and 60s, computers became more powerful and smaller, eventually leading to the introduction of the home personal computer (PC) in the 1970s. Today, electronic devices are all around us ... computers, cell (mobile) phones, televisions, calculators, hearing aids, and cars are just a few examples of devices that form part of everyday life in the 21st century and which make use of electronics. The purpose of this book is to introduce the subject of electronics to people who have no prior knowledge of the subject. If you don't know what a prototyping breadboard is, or have no idea what a resistor or diode do, then this book will help you to gain a basic understanding of what electronics components exist and what they are used for. You will also learn how to combine such components to build electronics circuits. Although there is a logical flow in the way that information is presented, you can pretty much jump around from chapter to chapter as it suits you, picking out the material that is of most interest. The book is split into two parts - the first introduces the subject of electronics, and the second contains a range of simple circuits to design and build. Part 1 - Getting Started with Electronics \* Chapter 1 - Electricity and Electric Circuits \* Chapter 2 - Equipment You Need in Your Electronics Laboratory \* Chapter 3 - Safety \* Chapter 4 - Resistors \* Chapter 5 - Capacitors \* Chapter 6 - Diodes \* Chapter 7 - Light Emitting Diodes (LEDs) \* Chapter 8 - Transistors \* Chapter 9 - Integrated Circuits \* Chapter 10 - The 555 Timer \* Chapter 11 - Combining Electronics with Software Part 2 - Designing and Building Electronics Circuits \* Chapter 12 - Using an Electronics Prototyping Breadboard \* Chapter 13 - Illuminating a Single LED \* Chapter 14 - Using a Multimeter to Measure Voltage, Current and Resistance \* Chapter 15 - Connecting Multiple LEDs in Series \* Chapter 16 - Connecting Multiple LEDs in Parallel \* Chapter 17 - Using a Variable Resistor to Control the Speed of a Small DC Motor \* Chapter 18 - Using Wind Power \* Chapter 19 - Using a Transistor to Switch On an LED \* Chapter 20 - Charging and Discharging a Capacitor \* Chapter 21 - Building a Light Sensor - Night Light \* Chapter 22 -**

*The preparation for a career in education and training cuts into all three categories of knowledge: cognitive, affective, and psychomotor, and all four dimensions of competence. The implication is that effective teaching requires not only theoretical knowledge, but also practical abilities that include a range of instructional skills and techniques. The workbook therefore contains a number of activities intended to promote professional competence. The types of activities vary: they are used to stimulate thinking (promoting reflective practice), and provide guidance in the application of knowledge, as well as developing certain instructional skills. Note that the amount of activities included here is only scratching the surface; different teaching matters should receive priority in the continuous professional development (CPD) of academic staff. Readers may perceive some of the activities as challenging, or find it difficult to relate to that, owing to being novices in higher education teaching and learning. In view of this, the reading includes comments on each activity (Activity solutions), as well as comments on the reflection activities, as a further attempt at supporting and enhancing the professional development of novice teachers. The workbook includes reading on aspects of resource design for learning*
