The broadcasting industry's trade association, the National Association of Broadcasters (NAB), sought to sanitize television content via its self-regulatory document, the Television Code. The Code covered everything from the stories, images, and sounds of TV programs (no profanity, illicit sex and drinking, negative portrayals of family life and law enforcement officials, or irreverence for God and religion) to the allowable number of commercial minutes per hour of programming. It mandated that broadcasters make time for religious programming and discouraged them from charging for it. And it called for tasteful and accurate coverage of news, public events, and controversial issues. Using archival documents from the Federal Communications Commission, NBC, the

NAB, and a television reformer, Senator William Benton, this book explores the run-up to the adoption of the 1952 Television Code from the perspectives of the government, TV viewers, local broadcasters, national networks, and the industry's trade association. Deborah L. Jaramillo analyzes the competing motives and agendas of each of these groups as she builds a convincing case that the NAB actually developed the Television Code to protect commercial television from reformers who wanted more educational programming, as well as from advocates of subscription television, an alternative distribution model to the commercial system. By agreeing to self-censor content that viewers, local stations, and politicians found objectionable, Jaramillo concludes, the NAB helped to ensure that commercial broadcast television would remain the dominant model for decades to come.

Magic or spycraft? In 1953, against the backdrop of the Cold War, the CIA initiated a top-secret program, code-named MKULTRA, to counter Soviet mind-control and interrogation techniques. Realizing that clandestine officers might need to covertly deploy newly developed pills, potions, and powders against the adversary, the CIA hired America's most famous magician, John Mulholland, to write two manuals on sleight of hand and undercover communication techniques. In 1973, virtually all documents related to MKULTRA were destroyed. Mulholland's manuals were thought to be among them—until a single surviving copy of each, complete with illustrations, was recently discovered in the agency's archives. The manuals reprinted in this work represent the only known complete copy of Mulholland's instructions for CIA officers on the magician's art of deception and secret communications.

A complete assessment tool for investigating maths difficulties in children, this book also provides advice for implementing the findings into teaching plans.

"If it is beyond your power to control, let it go." "Do not wish that all things will go well with you, but that you will go well with all things that will overcome life's challenges, rather than be overcome by them." Epictetus (c. AD 50-135) was a former Roman slave who became a philosopher, influencing the future emperor Marcus Aurelius among many others. His philosophy, Stoicism, was practical, not theoretical--aimed at helping you deal with suffering here and now. Epictetus knew suffering--besides being enslaved, he was lame in one leg and walked with a crutch. The Manual is a collection of Epictetus' essential teachings and pithy sayings, compiled by one of his students. It is the most accessible and actionable guide to Stoicism.

Memories That Shaped an Industry

The Coding Manual for Qualitative Researchers

Stoicism is the most helpful and practical philosophy ever devised. Its intention is to help people find happiness by thinking differently about their lives and their problems. The advice the Stoics provided centuries ago is still the best anyone has offered, and it's as useful today as it was then—or more. When anyone today says something really wise, the Stoics usually said it first. Today the word “stoicism” is often used to mean suffering without complaint, but the true ideas, and ideals, of the Stoics are far more powerful and interesting. Stoicism means knowing the difference between what we can control and we can't, and not worrying about the latter. The Stoics were masters of perspective, always taking the long view while remembering that life is short. And they were deep and insightful students of human nature, understanding how we manage to make ourselves miserable as well as how we seek and can find fulfillment. The great insights of the Stoics are spread over a wide range of ancient sources. This book brings them all together for the first time. It systematically presents what the various Stoic philosophers said on every important topic, accompanied by an eloquent commentary that is clear and concise. The result is a set of philosophy lessons for everyone—the most valuable wisdom of ages past made available for our times, and for all time.
