'The growth of public health courses aimed at undergraduates has created a new need for textbooks that are appropriate and stimulating. Miranda Thurston has succeeded in producing something which strikes the right note. It is wide ranging in scope without being superficial and is accessible to the young learner. It is a sort of 'Wiki'. Just what the aspiring public health practitioner ordered.' – Professor John R. Ashton C.B.E., President of the UK Faculty of Public Health. Key Themes in Public Health comprises a series of introductory essays exploring key themes and concepts in public health. Ranging from political and economic concern with improving population health and reducing health inequalities, to debates about how to protect populations from new health threats, as well as a concern with individual responsibility for lifestyles and behaviour, the themes discussed include: determinants of health, globalisation, evidence, climate change, ethics, development, poverty, risk and population. Presenting provocative ways of thinking about key ideas in a concise fashion, each essay provides a basic grounding in the relevant theme as well as a departure point for further study by: Defining the theme in an accessible way Placing each idea in its particular social, political, economic and historical context Illustrating its application and significance for public health Identifying and exploring issues surrounding each of the themes This text provides an accessible overview for students new to public health who want to get to grips with the full range and complexity of this diverse and multidisciplinary field.

The previous edition of the International Encyclopedia of Ergonomics and Human Factors made history as the first unified source of reliable information drawn from many realms of science and technology and created specifically with ergonomics professionals in mind. It was also a winner of the Best Reference Award 2002 from the Engineering Libraries Division, American Society of Engineering Education, USA, and the Outstanding Academic Title 2002 from Choice Magazine. Not content to rest on his laurels, human factors and ergonomics expert Professor Waldemar Karwowski has overhauled his standard-setting resource, incorporating coverage of tried and true methods, fundamental principles, and major paradigm shifts in philosophy, thought, and design. Demonstrating the truly interdisciplinary nature of this field, these changes make the second edition even more comprehensive, more informative, more, in a word, encyclopedic. Keeping the format popularized by the first edition, the new edition has been completely revised and updated. Divided into 13 sections and organized alphabetically within each section, the entries provide a clear and simple outline of the topics as well as precise and practical information. The book reviews applications, tools, and innovative concepts related to ergonomic research. Technical terms are defined (where possible) within entries as well as in a glossary. Students and professionals will find this format invaluable, whether they have ergonomics, engineering, computing, or psychology backgrounds. Experts and researchers will also find it an excellent source of information on areas beyond the range of their direct interests.

The period of adolescence involves growth, adaptation, and dramatic reorganization in almost every aspect of social and psychological development. Agriculture employs some one billion workers worldwide, is the largest sector for female employment in many countries, especially in Africa and Asia, and accounts for approximately seventy per cent of all child labor. Agriculture is also one of the most hazardous of all occupations, with many workers suffering accidents and ill health each year. The code of practice put forth in this book is intended to raise awareness of the hazards and risks associated with agriculture. It is designed to promote effective management and control of risks, help prevent occupational accidents and diseases, and improve the working environment in practice. The book encourages governments, employers, workers, and other stakeholders to cooperate to prevent accidents and diseases and to promote more positive attitudes and behavior toward occupational safety and health throughout the agriculture sector.

How an individual responds to crises and critical incidents at work, both immediately and subsequent to the event, is heavily influenced both by personality characteristics and their use of coping strategies. These can, in turn, be affected by levels of education, gender and even the profession within which the individual is working. Coping, Personality and the Workplace offers theory, research and practice on our ability to cope with dangerous situations, critical incidents or other work crises. The chapters include perspectives on social and health habits and risks; gender and age differences as well as a range of different sources of threat: financial, psychological and physical; those within and outside the individual's control; immediate and chronic. For organizations, this collection provides help and advice to build into employee safety and support programmes; for policy makers, a sense of the emerging sources of risk related to occupational health and for researchers, an anthology of original applied research from some of the leading authors in three continents.

For almost four decades, controversy has surrounded the tactical use of herbicides in Southeast Asia by the United States military. Few environmental or occupational health issues have received the sustained international attention that has been focused on Agent Orange, the major tactical herbicide deployed in Southern Vietnam. With the opening and establishment of normal relations between the United States and the Socialist Republic of Vietnam in 1995, the time has come for a thorough re-examination of the military use of Agent Orange and other "tactical herbicides" in Southern Vietnam, and the subsequent actions that have been taking place since their use in Vietnam. The United States Department of Defense has had the major role in all military operations involving the use of tactical herbicides, including that of Agent Orange. This included the Department's purchase, shipment and tactical use of herbicides in Vietnam, its role in the disposition of Agent Orange after Vietnam, its role in conducting long-term epidemiological investigations of the men of Operation RANCH HAND, and its sponsorship of ecological and environmental fate studies. This book was commissioned by The Office of the Deputy Under Secretary of Defense (Installations and Environment) with the intent of providing documentation of the knowledge on the history, use, disposition and environmental fate of Agent Orange and its associated dioxin.
