Over the past few years, it has become more and more obvious that fish farming will become increasingly important in the future. As fish farming moves into its industrial phase, technology will be an important factor in determining its successful development.

It is therefore important for scientists & representatives from the aquaculture industry to meet to define state of the art and explore future development of fish farming technology for different fish species. 81 papers and abstracts were presented at the conference. The proceedings reflect the different sections of the conference: the plenum sessions and three parallel sessions:

Juvenile marine fish, open production plants, closed production plants and poster sessions.

This book is an attempt to provide in a single source current state-of-the-art methodologies for protein sequence analysis. It is hoped that these various chapters are presented in such a way that both the newcomer and the established protein chemist will find useful information and directions to new techniques. This book offers a rich array of techniques and methods for

sequencing proteins and peptides. It should meet the expectations of investigators in protein chemistry who wish to update their knowledge of sequencing techniques, and of those who wish to reacquaint themselves with the best available current technologies.
