The long-awaited companion piece to Derrick Jensen's immensely popular and highly acclaimed works A Language Older Than Words and The Culture of Make Believe. A series of simple but increasingly provocative premises, Jensen leaves us hoping for what may be inevitable: a return to agrarian communal life via the disintegration of civilization itself. In How to Super Tune and Modify Holley Carburetors, best selling author Vizard explains the science, the function, and most importantly, the tuning expertise required to get your Holley carburetor tuned best for your performance application.

Many books have been written about war, but few have focused on how wars can be brought to an end. Wars are rarely inevitable however and this book is aimed at understanding how violent conflicts can be brought to a close through intervention, mediation and political negotiation. The simple premise underlying the book is that wars between states and wars within states are generally fought by people for particular political goals or perceived interests. War is better understood as a methodology rather than an ideology. When the context, issues and actors in these armed conflicts change, it is often possible to control, or even transform such violence. By bringing together a number of existing debates from peace and conflict research as well as scholars of international relations, the book examines the dynamic forces that lie behind the ending of wars and how these have changed over time. Examples are drawn from a wide range of armed conflicts to analyse the efforts that have been made to bring them to an end. From War-War to Jaw-Jaw, or more typically Jaw-War. Efforts at third-party intervention, mediation and political negotiation across a range of conflict zones from Europe to Sub-Saharan Africa are examined in full. Neither idealistic nor fatalistic, this book is a must-read for all students of international politics and security studies.

The book covers a decade of work with some of the largest commercial and government agencies around the world in addressing cyber security related to malicious insiders (trusted employees, contractors, and partners). It explores organized crime, terrorist threats, and hackers. It addresses the steps organizations must take to address insider threats at a people, process, and technology level. Today's headlines are littered with news of identity thieves, organized cyber criminals, corporate espionage, nation-state threats, and terrorists. They represent the next wave of security threats but still fall far short of nowhere near the devastating potential of the most insidious threat: the insider. This is not the bored 16-year-old hacker. We are talking about insiders like you and me, trusted employees with access to sensitive information - consultants, contractors, partners, visitors, vendors, and cleaning crews. Anyone in an organization's building or networks that possesses some level of trust. \* Full coverage of this threat in virtually every global 5000 organization, government agency, and individual interested in security. \* Brian Contos is the Chief Security Officer for one of the most well known, profitable and respected software companies in the U.S.—ArcSight.

New York Times bestselling author, Food Network star, and The Pioneer Woman herself, Ree Drummond brings us the first book in a brand-new picture book series! In Ree's own words: "I was all grown up when I moved out to the country. When I first arrived, I felt so out of place! But eventually, I looked around and discovered all the wonderful things about country life. So I decided to write a story about my experiences, as seen through the eyes of a little girl named Ree. Little Ree moves to the country and feels as scared and unsure as I was. But then she finds that if she sets her mind to it, being a country girl is a pretty cool thing. Come along on her adventures!" Little Ree trades in her city days for a country way of life when she moves with her family to her grandparents' ranch. She's excited to ride horses, swim in the pond, and help Grandma cook for everyone. But on her first day, she finds that living on a ranch can be tough. She has to get up at the crack of dawn, learn to herd cows, and make sure her horse, Pepper, doesn't eat everything in sight. And that's all before breakfast! Will she ever get used to this new place? Luckily, the end of the day brings a big family barbecue...and the happy discovery that being a country girl isn't about the right pair of boots, it's all about the right attitude. With warmth, humor, and stories inspired by life on the ranch, Ree Drummond's new picture book introduces us to a spunky new picture book star and treats us to a special pancake recipe at the end!

Ender's Game, Orson Scott Card's award-winning 1985 novel, has been discovered and rediscovered by generations of science fiction fans and young adult readers, banned and challenged in schools, assigned in high school English classes, and adopted as reading by the US Marine Corps. Ender's Game and its sequels explores rich themes—the violence and cruelty of children, the role of empathy in war, and the balance of individual dignity and the social good—with compelling elements of a coming-of-age story and exciting and immersive battle scenes. Ender's Game and Philosophy brings together over thirty philosophers to engage in wide-ranging discussion on the troubling, exciting, and fascinating issues raised in and amidst the excitement and fear of Orson Scott Card's novels and Gavin Hood's film. Authors address issues such as: the justifiability of pre-emptive strikes, how Ender's disconnected and dispassionate violence is mirrored in today's drone warfare, whether the end of saving the species can justify the most brutal means, the justifiability of lies and deception in wartimes, how military schools produce training in virtue, how Ender as the "good student" is held to a different educational standard, which rules can be broken in games and which cannot, Ender's world as a mirror of our own surveillance society, the moral hazards of child warriors, the value of Ender's ability to sympathize with his enemies, the meaning of a "hive-mind," the limits of our ability to relate to one, the relationship between Ender's story and Card's Mormonism. The authors of Ender's Game

and Philosophy challenge readers to confront and work through the conceptual and emotional challenges that Ender's Game presents, bringing a new light on the idea of a just war, the virtues of the soldier, the nature of childhood, the social value and moral corruption of lies and deception, the practices of education and of leadership, and the serious work of playing games.

The Encyclopedia of Life Sciences volumes 1-26 comprises the original 20 volumes of ELS (published in 2002) plus six supplementary volumes (published in 2007). Volumes 21-26 collates all the information that has been added to the online version on WileyIntersciences since the publication of the first 20-volume set. Together, they provide the reader with the most comprehensive and the up-to-date information in Life Sciences. Spanning the entire spectrum of life sciences, the Encyclopedia of Life Sciences (ELS) features more than 4,000 specially commissioned and peer-reviewed articles, making it an essential read for life scientists and a valuable resource for teaching. Aimed at researchers, students and teachers, articles provide comprehensive and authoritative coverage, written by leaders in the field. Colour illustrations and tables accompany articles, with appendix and glossary material providing essential information for the non-specialist, including biochemical and taxonomic information, acronyms, synonyms, units and other technical data. Importantly, all articles have been peer-reviewed to ensure a balanced representation of the literature. Articles are divided into three different categories indicating their level of complexity:

Introductory, Advanced and Keynote. Introductory articles have been written primarily for undergraduate and non-specialists requiring the basic concepts of a particular subject.

Advanced articles provide a more detailed discussion of specialist subjects, equivalent to that found in graduate level texts. Keynote articles provide a platform for debate where controversial issues and 'hot topics' can be discussed. Coverage includes: Biochemistry Cell Biology Developmental Biology Ecology Evolution and Diversity of Life Functional and Comparative Morphology Genetics and Disease Genetics and Molecular Biology Immunology Microbiology Neuroscience Plant Science Science and Society Structural Biology Virology

Machines have always gone hand-in-hand with the cultural development of m- kind throughout time. A book on the history of machines is nothing more than a specific way of bringing light to human events as a whole in order to highlight some significant milestones in the progress of knowledge by a complementary persp- tive into a general historical overview. This book is the result of common efforts and interests by several scholars, teachers, and students on subjects that are connected with the theory of machines and mechanisms. In fact, in this book there is a certain teaching aim in addition to a general historical view that is more addressed to the achievements by "homo faber" than to those by "homo sapiens", since the proposed history survey has been developed with an engineering approach. The brevity of the text added to the fact that the authors are probably not com- tent to tackle historical studies with the necessary rigor, means the content of the book is inevitably incomplete, but it nevertheless attempts to fulfil three basic aims:

First, it is hoped that this book may provide a stimulus to promote interest in the study of technical history within a mechanical engineering context. Few are the co- tries where anything significant is done in this area, which means there is a general lack of knowledge of this common cultural heritage.

Intended as the primary text for introductory courses on medical anthropology, this book integrates human biological data relevant to health and disease with both evolutionary theory and the social environments that more often than not produce major challenges to health and survival. Because students who take this fastest-growing anthropology course come from a variety of disciplines (anthropology, biology, especially pre-med students, and health sciences, especially), the text does not assume anything beyond a basic high-school level familiarity with human biology and anthropology. The authors first present basic biological information on a particular health condition and then expand

their analysis to include evolutionary, historical, and cross-cultural perspectives. Among the topics covered are nutrition, infectious disease, stress, reproductive health, behavioral disease, aging, race/racism and health, mental health, and healers and healing.

The United States has been the world's dominant super power for the last 70 years. It sets the rules for international relations and seeks to maintain the status quo. That situation is changing. China is expected to equal the United States in power within two decades, and relations between the two have become increasingly confrontational. American policy makers need to understand Chinese attitudes formed during 4,000 years of their history--as leaders of civilization until 1800--and then as impotent objects of exploitation and derision for the next 100 years. The Chinese have strong resentments against the nations of the West, resentments that pose a danger of future conflict unless American policy makers understand and attempt to mitigate them. Any evaluation of China's future actions that omits its long history treats relations between the two countries as mere questions of economic tensions, military power, and super-power ambitions. While these factors are important, so also is cultural memory. This book presents a concise but complete overview of Chinese history up to 2014 and indicates crucial lessons that should be drawn in order to facilitate peaceful trade and cooperation.

Al-Ma'mun acknowledged al-l: lasan's skill, but did not excuse him, saying: "laziness has prevented you from reading the whole of it-it is to geometry as to speech and writing." (H. 264). Al-l: lasan is rarely mentioned by name elsewhere in the sources and may have preferred to devote his time to scholarship, whereas his brothers were involved.
