In elegant and accessible prose, Rovelli takes us on a wondrous journey from Democritus to Albert Einstein, from Michael Faraday to gravitational waves, and from classical physics to his own work in quantum gravity. The emergence of language, social intelligence, and tool development are what made homo sapiens sapiens differentiate itself from all other biological species in the world. The use of language and the management of social and instrumental skills imply an awareness of intention and the consideration that one faces another individual with an attitude analogical to that of one 's own. than phenomenal awareness. A new class of neurons has been discovered in the premotor area of the monkey brain: 'mirror neurons'. Quite remarkably, they are tuned to fire to the enaction as well as observation of specific classes of behavior: fine manual actions and actions performed by mouth. They become activated independent of the agent, be it the self or a third person whose action is observed. The activation in mirror neurons is automatic and binds the observation and enaction of some behavior by the self or by the observed other. The peculiar first-to-third-person 'intersubjectivity' of

Einstein's steadfast refusal to accept certain aspects of quantum theory was rooted in his insistence that physics has to be about reality. Accordingly, he once derided as "spooky action at a distance" the notion that two elementary particles far removed from each other could nonetheless influence each other's properties—a hypothetical phenomenon his fellow theorist Erwin Schrödinger termed "quantum entanglement." In a series of ingenious experiments

In principle the lessons learned may be applicable in other areas, including the eventual development of quantum computers.

In 1851, struggling, self-taught physicist Léon Foucault performed a dramatic demonstration inside the Panthéon in Paris. By tracking a pendulum's path as it swung repeatedly across the interior of the large ceremonial hall, Foucault offered the first definitive proof -- before an audience that comprised the cream of Parisian society, including the future emperor, Napoleon III -- that the earth revolves on its axis. Through careful, primary research, world-renowned author Amir Aczel has revealed the life of a gifted physicist who had almost no formal education in science, and yet managed to

The range and breadth of Foucault's discoveries is astonishing: He gave us the modern electric compass, devised an electric microscope, invented photographic technology, and made remarkable deductions about color theory, heat waves, and the speed of light. Yet until now so little has been known about his life. Richly detailed and evocative, *Pendulum* tells of the illustrious period in France during the Second Empire; of Foucault's relationship with Napoleon III, a colorful character in his own right; and -- most notably -- of the crucial triumph of science over religion. scientific questions and posed new ones that are still relevant today.

"God's Glass" is the life story of Joanie Callahan, a woman born with algophilia - the scientific term for masochism. But Joanie's masochism isn't just sexual - it's all of her happiness that's tied to pain. She can only feel the highest emotional joys of art, music, love, and other things through some measure of pain. Joanie's family ostracizes her for this, going so far as to get her an exorcism and have her committed to a psych ward for electro-shock therapy. Joanie is all alone in the world, until she meets a boxer named Michael who might possibly be just like her...

**Science Fiction Novels Written By The Late Philip K. Dick . . . TOTAL RECALL - BLADE RUNNER - THE ADJUSTMENT BUREAU** But what you probably didn't know is that their creator was living out some of the same incredibly bizarre scenarios that he wrote about. One can easily compare Philip to the character played by Arnold Schwarzenegger in "Total Recall," who found himself in a parallel universe on a faraway planet, despite the fact that he was only supposed to be hooked up in a laboratory to a machine that creates realistic dream-like images. Which reality is the character really living in? At a sci-fi press conference held in France in 1977, Philip tried to explain some of his bewildering thoughts about the existence of a parallel or self-

"I claim to remember a different - very different - present life. I know of nobody who has ever made this claim before but I rather suspect that my experience is not unique. What perhaps is unique is my willingness to talk about it. We are living in a computer-programmed reality and the only clue we have to it is when some variable is changed and some alteration in our reality occurs . . . and because of this a variable WAS changed - reprogrammed as it were - and an alternative world branched off." **genius Philip K. Dick we offer up dozens of his personal experiences, as well as those of others in the UFO and paranormal fields, where synchronicities seem to abound. This is NOT science fiction. This is a universe that cannot be so easily grasped or explained. The well-known collector of scientific curiosities, Charles Fort, is often quoted as having said: "The Earth is a farm. We are someone's property." He likened our condition to being movable pieces on a chess board. "There is no doubt that we are under some sort of surveillance and that an "invisible hand" has the ability to carve out our existence and "interfere" in our daily lives by creating a variety of bizarre "play scripts" that to some may seem like pure "coincidences." Or so says pop culture**

paranormalist Tim Beckley, who notes that "Synchronicities are not just random occurrences but are laid out before us by some sort of synchronicity command post, which ably demonstrates their mastery or control over us hapless earthlings." Drawing on the masterful mind of creative genius Philip K. Dick (some to this day perceive him to have been a total "mad man") we offer up dozens of his personal experiences, as well as those of others in the UFO and paranormal fields, where synchronicities seem to abound. Beckley and co-author Sean Casteel lay out a plausible scenario to "explain" the intricate workings of what has been dubbed "The Synchronicity Command Board," or "Earth Coincidence Control Office," as so aptly named by the

*Susskind and data engineer Art Friedman are back. This time, they introduce readers to Einstein's special relativity and Maxwell's classical field theory. Using their typical brand of real math, enlightening drawings, and humor, Susskind and Friedman walk us through the complexities of waves, forces, and particles by exploring special relativity and electromagnetism. It's a must-read for both devotees of the series and any armchair physicist who wants to improve their knowledge of physics' deepest truths.*

*and in her mid-twenties, Janey Lowes had been a vet for just two years when she left her home in County Durham and went travelling. Visiting Sri Lanka, she was horrified to see the state of so many of the island's dogs, in particular the three million strays. Over 5,000 miles from home, Janey decided there and then that she was going to move to the island indefinitely and do everything within her power to help them. She raised £10,000 to get started, setting up a charity called WECare Worldwide, and began work. Frightened, determined and excited all at the same time, she found a local who was willing to work with her and began scouring the streets for dogs in need. The New York Times bestselling author of *The Physics of Wall Street* “deftly explains all you wanted to know about nothingness—a.k.a. the quantum vacuum” (Priyamvada Natarajan, author of *Mapping the Heavens*). James Owen Weatherall’s bestselling book, *The Physics of Wall Street*, was named one of *Physics Today*’s five most intriguing books of 2013. In this work, he takes on a fundamental concept of modern physics: nothing. The physics of stuff—protons, neutrons, electrons, and even quarks and gluons—is at least somewhat familiar to most of us. But what about the physics

of nothing? Isaac Newton thought of empty space as nothingness extended in all directions, a kind of theater in which physics could unfold. But both quantum theory and relativity tell us that Newton's picture can't be right. Nothing, it turns out, is an awful lot like something, with a structure and properties every bit as complex and mysterious as matter. In his signature lively prose, Weatherall explores the very nature of empty space—and solidifies his reputation as a science writer to watch.
