This book bridges the gap between research and practice in the area of sustainable design of buildings, exploring the passive (climate-responsive) design and thermal behavior of buildings and ways to incorporate these enhancements in architectural and civil engineering practice. It presents climatic data and its analysis in a readily usable form and shows ways in which such data can be used to achieve passive (climate-responsive) and sustainable building design. The book presents case studies of sustainable building in each of five climatic zones of India. The book includes climatic data from 62 cities in India and describes how it can be synthesized in sustainable building design. The book can serve as a practical tool or handbook for architects, engineers, and designers, providing them with an understanding of the physical phenomena involved and a means for suitably implementing and applying passive (climate-responsive) design principles. It also offers a valuable resource for researchers, students, and policymakers working in the area of sustainable building design and construction.

2030. The United States continues to experience urbanization with its vast urban corridors on the east and west coasts. Although urban weather is driven by large synoptic and meso-scale features, events unique to the urban environment arise from the characteristics of the typical urban setting, such as large areas covered by buildings of a variety of heights; paved streets and parking areas; massive energy supply electricity, natural gas, water, and raw materials; and generation of waste heat and moisture. Urban Meteorology: Forecasting, Monitoring, and Meeting Users' Needs is based largely on the information provided at a Board on Atmospheric Sciences and Climate community workshop. This report describes the needs for end user communities, focusing in particular on needs that are not being met by current urban-level forecasting and monitoring. Urban Meteorology also describes current and emerging meteorological forecasting and monitoring capabilities that have had and will likely have the most impact on urban areas, some of which are not being utilized by the relevant end user communities. Urban Meteorology explains that users of urban meteorological information need high-quality information available in a wide variety of formats that foster its use and within time constraints that support users' decision processes. By advancing the science and technology related to urban meteorology and gathering input from key end user communities, urban meteorologists can better meet the needs of diverse end user communities. To continue the advancement within the field of urban meteorology, there are both short-term needs-which might be addressed with small investments but promise large, quick returns-as well as long-term future challenges that could require significant efforts and investments.

This book examines key issues concerning land acquisition, and puts forward policy suggestions. Land acquisition is one of the most important issues besetting India's political economy today. There have been many conflicts surrounding acquisitions; but there have been ample peaceful acquisitions. Growth in any economy requires more land. Hence in India too, in the future more and more land will be required for the purposes of infrastructure expansion, industrialization, urbanization etc. The book also examines a number of broader policy issues in the context of land reforms and shows how a successful resolution of the land acquisition matter is vital to attaining a high rate of growth. Using the case study method, the book examines the process of land acquisition in detail and its implications for farmers. It finds that the development of acquired land leads to higher growth and higher employment and it also leads to improvements for the dalits (the backward class people). Benefits in terms of revenues for the government are also observed. It argues that, if the acquisition process is properly executed, those farmers who lose land will not oppose acquisition but will instead become partners in the process of growth.

The combination of multidisciplinary research in plants, animals, microorganisms and their interactions with molecular biology, genetic engineering approaches and advances in cell biology research has broadened the horizons of the life sciences. This book deals with the latest trends in the life sciences and will be beneficial for postgraduate students and researchers. As the U.S.-India relationship continues to deepen, some misconceptions unfortunately exist about the forces driving India's economic growth. Over the course of a year-long series, the CSIS Wadhvani Chair in U.S.-India Policy Studies invited key business leaders to discuss the issues facing some of the foundational, albeit underexplored, sectors of the emerging Indian economy. Infrastructure, energy, health care, and manufacturing are top priorities for India's leaders. The policies affecting these sectors will have long-lasting implications for India's growth trajectory. The business leaders who delivered public remarks for this project outlined some of those choices and their importance. You will find their respective analyses and recommendations compiled in this report.

It explains sustainable nutrient management under organic farming and agriculture, with chapters focusing on the role of nutrient management in sustaining global ecosystems, the remediation of polluted soils, conservation practices, degradation of pollutants, biofertilizers and biopesticides, critical biogeochemical cycles, potential responses for current and impending environmental change, and other critical factors. Organic farming is both challenging and exciting, as its practice of “ feeding the soil, not the plant provides opportunity to better understand why some growing methods are preferred over others. In the simplest terms, organic growing is based on maintaining a living soil with a diverse population

of micro and macro soil organisms. Organic matter (OM) is maintained in the soil through the addition of compost, animal manure, green manures and the avoidance of excess mechanization. "Works of Dr. Shiyali Ramamrita Ranganathan (S.R. Ranganathan) need no introduction. They are renowned not because they cover certain facet of library and information science, but because they have been written by the father of library science in india, Dr. Ranganathan. These library science classics have been reprinted to make Dr. Ranganathan's work available to the current generation of librarians and for those to come."

Over the past twenty years, the knowledge and understanding of wastewater treatment has advanced extensively and moved away from

empirically based approaches to a fundamentally-based first principles approach embracing chemistry, microbiology, and physical and bioprocess engineering, often involving experimental laboratory work and techniques. Many of these experimental methods and techniques have matured to the degree that they have been accepted as reliable tools in wastewater treatment research and practice. For sector professionals, especially a new generation of young scientists and engineers entering the wastewater treatment profession, the quantity, complexity and diversity of these new developments can be overwhelming, particularly in developing countries where access to advanced level laboratory courses in wastewater treatment is not readily available. In addition, information on innovative experimental methods is scattered across scientific literature and only partially available in the form of textbooks or guidelines. This book seeks to address these deficiencies. It assembles and integrates the innovative experimental methods developed by research groups and practitioners around the world. Experimental Methods in Wastewater Treatment forms part of the internet-based curriculum in wastewater treatment at UNESCO-IHE and, as such, may also be used together with video records of experimental methods performed and narrated by the authors including guidelines on what to do and what not to do. The book is written for undergraduate and postgraduate students, researchers,

This book presents important fields of research in public healthcare in India from an interdisciplinary and health systems perspectives. Discussing how the exchange of power between the health justice triad, viz., the State (judiciary as the arm of the State), legal and medical professions, and civil society, cumulatively shapes the outcomes of health justice for citizens, it provides insights into India's juridico-legal processes and of seeking justice in healthcare. It critically assesses civil society's counter-hegemonic role in bolstering justice in health care and

examines the potential of transforming health care jurisprudence into health justice. Repositioning the social right to healthcare as integral to social citizenship and social justice, and opening avenues for inter-professional and interdisciplinary power discourse in public health policy research, the book is of interest to academics, practitioners, students, researchers, and the wide academic community working in public health care issues broadly. Study based on the findings of cases related to Yeotmal District of the state of Maharashtra, India.

An informative and insightful source of knowledge, analysis, and the latest data on internationalization of the Indian higher education system. Offering an in-depth analysis of internationalization of higher education in India, this book explains how the phenomenon plays itself out, how to put it into practice on the home turf, and to do it in a way that it is available to all instead of catering to a select few. It applies relevant theoretical contexts, presents an extensive range of facts and figures as substantiating

evidence, and stacks up this knowledge against ground reality. With a sharp commentary on the state of affairs, the book argues that internationalization is the only way forward for India and policymakers, educationists, and academics must look towards other countries such as China and Brazil which have made a fruitful commitment to scale the global value chain by making internationalization of higher education a top agenda item.
