

## Espen Guidelines On Enteral Nutrition Gastroenterology Lochs

*The ESC Textbook of Intensive and Acute Cardiovascular Care is the official textbook of the Acute Cardiovascular Care Association (ACVC) of the ESC. Cardiovascular diseases (CVDs) are a major cause of premature death worldwide and a cause of loss of disability-adjusted life years. For most types of CVD early diagnosis and intervention are independent drivers of patient outcome. Clinicians must be properly trained and centres appropriately equipped in order to deal with these critically ill cardiac patients. This new updated edition of the textbook continues to comprehensively approach all the different issues relating to intensive and acute cardiovascular care and addresses all those involved in intensive and acute cardiac care, not only cardiologists but also critical care specialists, emergency physicians and healthcare professionals. The chapters cover the various acute cardiovascular diseases that need high quality intensive treatment as well as organisational issues, cooperation among professionals, and interaction with other specialities in medicine. SECTION 1 focusses on the definition, structure, organisation and function of ICCU's, ethical issues and quality of care. SECTION 2 addresses the pre-hospital and immediate in-hospital (ED) emergency cardiac care. SECTIONS 3-5 discuss patient monitoring, diagnosis and specific procedures. Acute coronary syndromes (ACS), acute decompensated heart failure (ADHF), and serious arrhythmias form SECTIONS 6-8. The main other cardiovascular acute conditions are grouped in SECTION 9. Finally SECTION 10 is dedicated to the many concomitant acute non-cardiovascular conditions that contribute to the patients' case mix in ICCU. This edition includes new chapters such as low cardiac output states and cardiogenic shock, and pacemaker and ICDs: troubleshooting and chapters have been extensively revised. Purchasers of the print edition will also receive an access code to access the online version of the textbook which includes additional figures, tables, and videos to better illustrate diagnostic and therapeutic techniques and procedures in IACC. The third edition of the ESC Textbook of Intensive and Acute Cardiovascular Care will establish a common basis of knowledge and a uniform and improved quality of care across the field.*

*The subject of enteral nutrition is an interesting one both to the healthcare professionals working in this practice area and to the individuals who may benefit from nutritional support. These individuals usually have functional guts but may be suffering from dysphagia (with the underlying neurological deficits) or the effects of radiotherapy treatment. Enteral nutrition involves the provision of nutritional support to individuals whose nutritional requirements cannot be met by a normal diet. In particular, it is the process of delivering enteral feed via feeding tubes such nasogastric feeding, nasojejunal and percutaneous endoscopic gastrostomy tubes. Often, enteral nutrition provision involves the assessment of nutritional status, the determination of nutritional requirements, the establishment of feeding regimes, and the management of patients, pumps, feeds, and feeding tubes. Researchers in this field are also keen to evaluate the effect of enteral feeding protocols, algorithms, and guidelines on patients with different medical conditions in various care settings. There have also been a series of comparisons between the use of feeding tubes, feeding methods, and management approaches. Economic evaluations of enteral nutrition and Home Enteral Nutrition (HEN) teams show the benefits of Home Enteral Tube Feeding (HETF); however, due to the rising cost of HETF, there has been intense debate on the subject. There have been reviews on advances, challenges, and prospects in enteral nutrition. This Special Issue is intended to provide information on recent advances in the area of enteral nutrition.*

This handbook of paediatric gastroenterology, hepatology and nutrition provides a concise overview of key topics in these three closely related specialties.

Textbook of Critical Care is an extensive two volume guide to all aspects of critical care. The first volume covers systems of the human body in individual sections; the second volume continues to cover other vital topics for those working in an intensive care unit. With over 100 international contributors ensuring authoritative content throughout, and full colour illustrations across 1500 pages, Textbook of Critical Care is a valuable resource for residents, intensivists, and emergency medicine doctors.

In the past decade, CRRT has moved from a niche therapy within specific specialty centers to the standard of care for management of critically ill patients with acute renal failure. Continuous Renal Replacement Therapy provides concise, evidence-based, to-the-point bedside guidance about this treatment modality, offering quick reference answers to clinicians' questions about treatments and situations encountered in daily practice. Organized into sections on Theory; Practice; Special Situations; and Organizational Issues, Continuous Renal Replacement Therapy provides a complete view of CRRT theory and practice. Generous tables summarize and highlight key points, and key studies and trials are listed in each chapter.

New and groundbreaking therapeutic options for the critical care of patients with cerebrovascular disease have improved patient management, minimized morbidity, reduced in-patient care, improved quality of life, and had a positive economic impact on health service provision. This volume integrates these approaches and suggests the best therapy option for all cerebrovascular conditions. The early chapters of the book focus on monitoring techniques and interventions. Subsequent sections address the critical care of a wide range of cerebrovascular diseases: ischemic stroke, intracranial hemorrhage, subarachnoid hemorrhage, arteriovenous malformations, cerebral venous thrombosis and traumatic injury. The editors and authors are internationally recognized experts in their field, and the text is supplemented by tables and illustrations to demonstrate important clinical findings. This book will meet the needs of stroke physicians, neurologists, neurosurgeons, neurointensivists and interventional neuroradiologists seeking to maximize positive outcomes for their patients.

Nutrition Support for the Critically Ill

Interdisciplinary Nutritional Management and Care for Older Adults

ESPEN Guidelines on Enteral Nutrition

Critical Care of the Stroke Patient

ASPEN Enteral Nutrition Handbook

The A. S. P. E. N. Pediatric Nutrition Support Core Curriculum, 2nd Edition

This text provides a review of the current knowledge in both the mechanics of nourishing the critically ill and the metabolic and immunological roles nutrients play. In-depth chapters discuss disease-related malnutrition as distinct from under-or-over nourishment and the impact of nourishment in either form of malnutrition. The appropriate timing and indications for nutrition support are provided as well as advanced techniques for improving practice. A broad range of issues related to interdisciplinary practice are addressed. Useful for a wide variety of practitioners, including ICU doctors, hospitalists, and nutrition support physicians, Nutrition Support of the Critically Ill provides practical bedside advice and simplified recommendations for practice.

Well-illustrated throughout and with in-depth analyses, Nutrition, Diet Therapy, and the Liver provides a holistic understanding of the causative elements that precipitate liver disease and the nutritional factors and regimens that reverse deteriorating hepatic function. This up-to-date resource also incorporates emerging fields of science and significant discoveries. With contributions from leading experts of international repute in their respective fields, the book first emphasizes the important role nutrition plays not only in the prevention of liver disease but also in the reversal of liver dysfunction. The second section covers various aspects of alcoholic liver disease (ALD) and nonalcoholic fatty liver disease (NAFLD) as well as the consequent steatohepatitis that encompasses the whole spectrum of triglyceride accumulation, inflammation, fibrosis, and end-stage cirrhosis of the liver. The book then focuses on the mounting evidence in support of alcohol abuse, hepatitis viruses, and immune diseases as key predisposing factors in the incidence of hepatocellular carcinomas. The final section evaluates the importance of nutrition in the treatment of liver diseases in infants versus adults, including recovery after liver transplantation.

Human life relies on two basic supplies, oxygen and food. Oxygen can be utilized directly, but food has to go through a long process of digestion to become usable nutrients. The esophagus is the beginning part of this long journey. Because of its critical location, any abnormalities in this part of the body can be devastating and life-threatening and difficult to treat. This book covers many aspects of esophageal disorders, from congenital diseases to cancer. It includes 11 chapters written by highly experienced scholars from all over the world. It is our intention to provide readers an update in esophageal study and to raise the awareness how important this organ to our entire body system.

Since the original publication of Allogeneic Stem Cell Transplantation: Clinical Research and Practice, Allogeneic hematopoietic stem cell transplantation (HSC) has undergone several fast-paced changes. In this second edition, the editors have focused on topics relevant to evolving knowledge in the field in order to better guide clinicians in decision-making and management of their patients, as well as help lead laboratory investigators in new directions emanating from clinical observations. Some of the most respected clinicians and scientists in this discipline have responded to the recent advances in the field by providing state-of-the-art discussions addressing these topics in the second edition. The text covers the scope of human genomic variation, the methods of HLA typing and interpretation of high-resolution HLA results. Comprehensive and up-to-date, Allogeneic Stem Cell Transplantation: Clinical Research and Practice, Second Edition offers concise advice on today's best clinical practice and will be of significant benefit to all clinicians and researchers in allogeneic HSC transplantation.

Mini Nutritional Assessment (MNA)

Paediatric Parenteral Nutrition

Nutrition, Diet Therapy, and the Liver

Advanced Nutrition and Dietetics in Nutrition Support

Nutrition in Critical Care

Evidence-Based Practice of Palliative Medicine E-Book

*Perioperative care is the care that is given before and after surgery. This textbook is a complete guide to the anaesthetic and critical care management of patients undergoing complex surgeries in all organ systems of the body. Topics cover all age groups – neonates, children, and adults. Divided into 11 sections, the book begins with a general overview of critical care in the perioperative period discussing airway management, pain, fluid and electrolyte therapy, shock, arterial blood gas analysis, respiratory failure and mechanical ventilation, and thromboembolism. The following sections cover surgeries in different organ systems and patient groups – cardiothoracic and vascular, neurosciences, paediatrics, obstetrics and gynaecology, gastrointestinal, genitourinary, orthopaedics, head and neck, and transplantation. The final section explains selected miscellaneous topics including nutrition, haemodynamic monitoring, echocardiography, renal replacement therapy, and antibiotics. Compiling 700 pages, the comprehensive text is further enhanced by clinical photographs, diagrams and tables. Key points* Comprehensive guide to perioperative critical care in neonates, children and adults  
*Covers complex surgeries in all organ systems Includes discussion on imaging, airway management, and ventilation*  
*Highly illustrated with clinical photographs, diagrams and tables*

*Lipids have been in clinical use as components of intravenous nutrition for over 50 years. Over the last 15 years, new and improved lipids that include olive oil and/or fish oil have replaced the more traditional ones. These new lipids offer the opportunity to deliver high amounts of fatty acids and possess different functional properties: in particular, they can influence inflammatory processes, immune responses and hepatic metabolism. This book brings together articles written by leading international authorities in the area of intravenous lipids. Contributions discuss the latest findings in the field, ranging from pre-clinical research to the most recent clinical trials. Lipid functionality and utility in pediatric, adult surgical and critically ill patients are covered, as is the use of lipids in long-term home parenteral nutrition. Addressing a broad spectrum of topics, this publication provides a wealth of information for basic scientists, clinical researchers and clinical practitioners alike.*

*This open access book aims to primarily support nurses as leaders and champions of multimodal, Interdisciplinary nutrition care for older adults. A structured approach to fundamentals of nutrition care across Interdisciplinary settings is combined with additional short chapters about special topics in geriatric nutrition. The book is designed to provide highly accessible information on evidence-based management and care for older adults, with a focus on practical guidance and advice across acute, rehabilitation, and primary and secondary malnutrition prevention settings. The cost of malnutrition in*

*England alone has been estimated to be 119.6 billion per year, or more than 15% of the total public expenditure on health and social care. ^65 years). The importance and benefit of specialised nutrition care, delivered by experts in field, is well established for those with complex nutrition care needs. However, despite the substantial adverse impact of malnutrition on patient and healthcare outcomes, specialised management of this condition is often under-resourced, overlooked and under-prioritised by both older adults and their treating teams. As an alternative, timely, efficient, and effective supportive nutrition care opportunities may be appropriately implemented by nurses and non-specialist Interdisciplinary healthcare team members, working together with nutrition specialists and the older adults they care for. Practical, low-risk opportunities should be considered across nutrition screening, assessment, intervention, and monitoring domains for many patients with, or at risk of malnutrition. Whilst a variety of team members may contribute to supportive nutrition care, the nursing profession provide a clear focal point. Nurses across diverse settings provide the backbone for Interdisciplinary teamwork and essential patient care. The nursing profession should consequently be considered best placed to administer Interdisciplinary, multimodal nutrition care, wherever specialist nutrition care referrals are unlikely to add value or are simply not available. As such, the book is a valuable resource for all healthcare providers dedicated to working with older patients to improve nutrition care.*

*Provides comprehensive and practical guidance for managing the nutritional requirements of critically ill patients and thereby improving prognosis.*

*The EBMT Handbook*

*Pediatric Enteral Nutrition*

*Short Bowel Syndrome*

*Home Parenteral Nutrition, 2nd Edition*

*Beyond Physiology*

*Clinical Pharmacy and Therapeutics E-Book*

Home parenteral nutrition (HPN) is the intravenous administration of nutrients carried out in the patient's home. This book analyses current practices in HPN, with a view to inform best practice, covering epidemiology of HPN in regions including the UK and Europe, USA and Australia, its role in the treatment of clinical conditions including gastrointestinal disorders, cancer, ethical and legal aspects and patient quality of life.

Written in conjunction with the British Dietetic Association, *Advanced Nutrition and Dietetics in Nutrition Support* provides a thorough and critical review of the fundamental and applied literature in nutrition support. Extensively evidence-based and internationally relevant, it discusses undernutrition, nutritional screening, assessment and interventions, as well as key clinical conditions likely to require nutrition support, and the approaches to managing this in each of these conditions. Clinically oriented, *Advanced Nutrition and Dietetics in Nutrition Support* is the ideal reference for all those managing undernutrition in a range of clinical areas.

This book offers a pragmatic approach to day-to-day metabolic and nutritional care based on physiological considerations. Due to the numerous controversial trials published in the last 15 years, there is no clear guidance for intensive care regarding the metabolic and nutritional management of patients. This has resulted in a return to underfeeding and related complications in most ICUs worldwide as shown by the latest Nutrition Day data. Using a structured, logical approach, this book examines practical solutions for artificial feeding in complex areas of critical care (brain injuries, burns, cardiac failure, ECMO, intestinal failure, long term patient, renal failure, metabolic diseases, obesity, old patients) and discusses the measurement of the results of metabolic interventions. It also includes dedicated chapters focusing on specific problems in order to avoid complications. *Critical Care Nutrition Therapy for Non-nutritionists* is a valuable resource for all general intensivists in ICUs and ICU subspecialties such as cardiovascular, neuro, gastrointestinal and burns ICUs.

Provides timely, pertinent medical nutrition therapy information for the care of patients with over 360 diseases, disorders and conditions.

*Second Edition*

This Open Access edition of the European Society for Blood and Marrow Transplantation (EBMT) handbook addresses the latest developments and innovations in hematopoietic stem cell transplantation and cellular therapy. Consisting of 93 chapters, it has been written by 175 leading experts in the field. Discussing all types of stem cell and bone marrow transplantation, including haplo-identical stem cell and cord blood transplantation, it also covers the indications for transplantation, the management of early and late complications as well as the new and rapidly evolving field of cellular therapies. This book provides an unparalleled description of current practices to enhance readers' knowledge and practice skills. This work was published by Saint Philip Street Press pursuant to a Creative Commons license permitting commercial use. All rights not granted by the work's license are retained by the author or authors.

*Evidence-Based Practice of Palliative Medicine* is the only book that uses a practical, question-and-answer approach to address evidence-based decision making in palliative medicine. Dr. Nathan E. Goldstein and Dr. R. Sean Morrison equip you to evaluate the available evidence alongside of current practice guidelines, so you can provide optimal care for patients and families who are dealing with serious illness. Consult this title on your favorite e-reader with intuitive search tools and adjustable font sizes. Elsevier eBooks provide instant portable access to your entire library, no matter what device you're using or where you're located. Confidently navigate clinical challenges with chapters that explore interventions, assessment techniques, treatment modalities, recommendations /

guidelines, and available resources - all with a focus on patient and family-centered care. Build a context for best practices from high-quality evidence gathered by multiple leading authorities. Make informed decisions efficiently with treatment algorithms included throughout the book.

With over 400 drug monographs, this book covers the technical, practical and legal aspects that you should consider before prescribing or administering drugs via enteral feeding tubes.

□ This new edition of *Clinical Pharmacy and Therapeutics* was really very helpful when I was doing an MSc course in Advancing Pharmacy Practice and it was really very helpful in all the clinical diseases I have to read for my PBL. I also used it as one of my most reliable reference books for the in-course simulation ward rounds and other clinical case studies. It is a great book to have as a practising clinical or hospital pharmacist or even community pharmacist. It will also be of great use to anyone doing a course in pharmacotherapy. This book will always be of use to you throughout your studentship or when practising after graduation. It is also more portable than most other pharmacotherapy textbooks with the same amount of information. □ Now in its sixth edition, this best-selling, multi-disciplinary textbook continues to draw on the skills of pharmacists, clinicians and nurses to present optimal drug regimens. The authors integrate an understanding of the disease processes with an appreciation of the pathophysiological processes, clinical pharmacy and the evidence base. Each chapter is co-written by a pharmacist and a clinician, and each chapter begins with key points and ends with cases to test understanding. The sixth edition is now on StudentConsult for the first time, giving online access to the full text. Key points boxes at the beginning of each chapter Case-study boxes throughout the chapters Each chapter co-written by a pharmacist and a clinician In-depth treatment of therapeutics to support pharmaceutical prescribing Logical order and format: key points, epidemiology, aetiology, disease, clinical manifestations, investigations and treatment, drugs used in treatment. Dosage reference sources given where appropriate, along with useful websites and further reading for each chapter. New co-editor, Karen Hodson Over 10 new authors Now in 4-colour On StudentConsult for the first time New chapter on Dementia Many new and revised illustrations Chapters revised to include advances in therapeutics and changes to dose regimens and licensed indications Updated case studies

An Evidence-based Practical Guide for Nurses

Continuous Renal Replacement Therapy

Diet and Nutrition in Critical Care

Nutrition and Patients

Fragility Fracture Nursing

Manual of Nutritional Therapeutics

**Finding all the information necessary to treat or meet the nutritional requirements of patients who are severely ill or establish new protocols has historically been problematic. This is addressed in Diet and Nutrition in Critical Care. This major reference work encapsulates the latest treatments and procedures to meet the dietary and nutritional needs of the critically ill. Where evidence is available this is presented. However, where evidence is absent, the authors highlight this and provide guidance based on their analysis of other available data and their clinical experience. Diet and Nutrition in Critical Care is a three volume set which addresses the needs of all those concerned with diet and nutrition in the critically ill and covers General Aspects, Enteral Aspects, and Parenteral Aspects. Each volume is stand alone and is further divided into separate sections. The Sections in the General Aspects are: General conditions in the severely ill General metabolic effects and treatments Assessment protocols General nutritional aspects Specific nutrients Adverse aspects The next two volumes Enteral Aspects and Parenteral Aspects contain the following sections: General aspects and methods Specific nutrients Specific conditions Adverse aspects and outcomes Comparisons or dual parenteral and enteral support or transitions Preclinical studies The authors recognise the limitations in simplistic divisions and there is always difficulty in categorising treatment regimens. For example, some regimens involve transitions from one feeding protocol to another or the development of co-morbid conditions and in some cases enteral support may be supplemented with parenteral support. This complexity however, is addressed by the excellent indexing system. Contributors are authors of international and national standing, leaders in the field and trendsetters. Emerging fields of science and important discoveries relating to artificial support will also be incorporated into Diet and Nutrition in Critical Care. This volume represents a one stop shop of material related to enteral and parenteral support and is essential reading for those specialising in intensive and critical care, dietitians, nutritionists, gastroenterologists, cardiologists, pharmacologists, health care professionals, research scientists, molecular or cellular biochemists, general practitioners as well as those interested in diet and nutrition in general.**

**This open access book aims to provide a comprehensive but practical overview of the knowledge required for the assessment and management of the older adult with or at risk of fragility fracture. It considers this from the perspectives of all of the settings in which this group of patients receive nursing care. Globally, a fragility fracture is estimated to occur every 3 seconds. This amounts to 25 000 fractures per day or 9 million per year. The financial costs are reported to be: 32 billion EUR per year in Europe and 20 billion USD in the United States. As the population of China ages, the cost of hip fracture care there is likely to reach 1.25 billion USD by 2020 and 265 billion by 2050 (International Osteoporosis Foundation 2016). Consequently, the need for nursing for patients with fragility fracture across the world is immense. Fragility fracture is one of the foremost challenges for health care providers, and the impact of each one of those expected 9 million hip fractures is significant pain, disability, reduced quality of life, loss of independence and decreased life expectancy. There is a need for coordinated, multi-disciplinary models of care for secondary fracture prevention based on the increasing evidence that such models make a difference. There is also a need to promote and facilitate high quality,**

evidence-based effective care to those who suffer a fragility fracture with a focus on the best outcomes for recovery, rehabilitation and secondary prevention of further fracture. The care community has to understand better the experience of fragility fracture from the perspective of the patient so that direct improvements in care can be based on the perspectives of the users. This book supports these needs by providing a comprehensive approach to nursing practice in fragility fracture care.

**Seminars in Dysphagia** provides a comprehensive overview of contemporary issues in the field of dysphagia assessment, treatment and management in diverse subject populations. Expert views are shared by international clinical experts from different medical and allied health fields. This book contains an introductory chapter on the anatomical structures and physiology processes that underpin dysphagia and discusses the effects of polypharmacy and ageing on deglutition. Contemporary practices of functional assessment of swallowing and the endoscopic assessment for both oropharyngeal and esophageal dysphagia are reviewed. Both the nutritional support and decision making in oral route are described and the impact of dysphagia on carers and family when managing dysphagia. Several chapters are dedicated to outlining the manifestation and consequences of dysphagia in specific populations, including persons with Parkinsons disease, dystonia, chronic obstructive pulmonary disease and mixed connective tissue disease.

This text offers health professionals the scientific rationale for enteral nutrition support, and ways to avoid complications. It offers a practical approach to successfully administering enteral support to children, and includes a scientific rationale for suggested techniques. This book should be of interest to nutritionists; hospital dietitians; physicians and nurses; and medical nutritionists.

**Perioperative Critical Care**

**Nutrition and Traumatic Brain Injury**

**Improving Acute and Subacute Health Outcomes in Military Personnel**

**Two Volume Set**

**An Evidence-based Approach to Treatment**

**Nutrition in Intensive Care Medicine**

*Disease-related malnutrition is a global public health problem. The consequences of disease-related malnutrition are numerous, and include shorter survival rates, lower functional capacity, longer hospital stays, greater complication rates, and higher prescription rates. Nutritional support, in the form of oral nutritional supplements or tube feeding, has proven to lead to an improvement in patient outcome. This book is unique in that it draws together the results of numerous different studies that demonstrate the benefits of nutritional support and provides an evidence base for it. It also discusses the causes, consequences, and prevalence of disease-related malnutrition, and provides insights into the best possible use of enteral nutritional support.*

*Parenteral nutrition in general is required if nutritional needs cannot be met by oral or enteral feeding. In the paediatric patient, its initiation depends both on individual circumstances and the age and size of the infant or child. This compact reference work on parenteral nutrition in children is based on the 'Guidelines for Paediatric Parenteral Nutrition' that have been developed jointly by the European Society for Paediatric Gastroenterology, Hepatology and Nutrition (ESPGHAN) and the European Society for Clinical Nutrition and Metabolism (ESPEN), in collaboration with the European Society for Paediatric Research (ESPR). These guidelines were based on systematic literature reviews as well as a formal consensus process of a multidisciplinary panel of professionals. However, as a result of the scarcity of good quality clinical trials in children, many of the recommendations were extrapolated from adult studies and based on expert opinion. A detailed analysis of the available data was performed, and for each statement, the level of evidence and grade of recommendation was assessed. This reference guide has been conceived as an aid for the treating physician to assist him in the decision process, thus being a valuable companion in clinical practice.*

*Now updated, this quick-reference provides practical, evidence-based recommendations for nutrition of healthy individuals, nutritional support of hospitalized patients, and dietary management of patients with diabetes, renal disease, cancer, and AIDS.*

*Traumatic brain injury (TBI) accounts for up to one-third of combat-related injuries in Iraq and Afghanistan, according to some estimates. TBI is also a major problem among civilians, especially those who engage in certain sports. At the request of the Department of Defense, the IOM examined the potential role of nutrition in the treatment of and resilience against TBI.*

**Critical Care Nutrition Therapy for Non-nutritionists**

**Research and Practice in the Elderly**

**The ESC Textbook of Intensive and Acute Cardiovascular Care**

**Disease-related Malnutrition**

**Textbook of Critical Care**

Short Bowel Syndrome: Practical Approach to Management is the first reference exclusively about the issues experienced by patients with Short Bowel Syndrome. It covers all aspects of normal and abnormal physiology, the presenting features, and outcomes, including metabolic problems, gallstones, and renal stones. It discusses both medical and surgical treatments, including intestinal transplantation. The use of growth factors, which is likely to become increasingly important in promoting intestinal structural adaptation, is extensively discussed. Special emphasis is given to the psychosocial quality of life of patients, including support groups. Emphasis is also given to the importance of an experienced multidisciplinary team in the management of patients. This book is particularly timely given the recent advances in the management of Short Bowel Syndrome, including the availability of pharmacologic agents to enhance intestinal absorption, refinements in parenteral nutrition, and surgical procedures designed to eliminate the need for parenteral nutrition support. The goal of this international, interdisciplinary book is to bring the subject of Short Bowel Syndrome to a wide range of specialists. A wide range of specialists have contributed to this book to provide various viewpoints on the state-of-the-art care of those with this condition. This book is the first of a new series which will present the proceedings of the newly established Nestlé Nutrition Workshop Series: Clinical Nutrition.

Programme aimed at adult nutrition. Undernutrition is a common phenomenon in elderly people, and malnutrition reaches significant levels in hospital, nursing homes or home care programs. Consequences of malnutrition often go unrecognised owing to the lack of specific validated tools to assess nutritional status in frail elderly persons. The Mini Nutritional Assessment (MNA) provides a single, rapid assessment of nutritional status in elderly of different degrees of independence, allowing the prevalence of protein-energy malnutrition to be determined and to evaluate the need for nutritional intervention and strategies. Easy, quick and economical to perform, it enables staff to check the nutritional status of elderly people entering hospitals or institutions and to monitor changes occurring during their stay. Moreover, the MNA is predictive of the cost of care in hospital. This publication will be of immense assistance to heads of geriatric teaching units, teachers in nutrition, clinicians general practitioners and dietitians, enabling them to better detect, recognise and start treatment of malnutrition in the elderly.

Reaching beyond traditional nutrition support The care of ICU patients has seen many improvements over the years, both with regard to diagnostic and supportive measures. The first part of this book analyzes nutritional support at various levels, ranging from the cell level to the whole body. Drawing on recent prospective randomized studies, the authors propose a new approach for oral, enteral and/or parenteral nutrition. The book underlines the interference between nutrition and outcome to reach recovery, giving to this field an increased importance for better shock management: The best glucose control, individualized nutritional support and the avoidance of harmful interferences is extensively discussed. The second part deals with patients suffering from multi-organ failure and the need for a better understanding of the interactions between disease and nutrition. Identification of the metabolic condition of the patient, existence or not of evidence-based medicine, expert opinion, treatment opportunities and the clinical manager recognizing threats are all integrated to reach the appropriate decision. This last part will help the reader to untangle the complex nutrition of the 21st century and to propose a personalized nutritional support process.
