No area of tax law more vividly illustrates the dichotomy between substance and form than the reciprocal trust doctrine. When settlors began creating "crossed trusts" to evade estate tax liability, the Internal Revenue Service obtained Supreme Court precedent in *United States v. Estate of Grace* allowing it to tax the "economic reality" of such trusts. But subsequent cases have cast aspersions on this "substance-over-form" rationale, which becomes even more problematic when extended to income and gift taxation of such trusts. In this Article, Professor Marty-Nelson revitalizes Grace, urging that courts refrain from further dismantling a doctrine that serves useful purposes even outside tax law.
