Management of social issues in supply chain is increasingly becoming challenging and complex. The major challenges for a firm to counter social issues come from both internal and external stakeholders. Thus, firms adopt strategies which, while meeting the stakeholder demands also ensure performance improvements. Corporate social responsibility (CSR) is adopted by the firms to address social and societal issues while achieving performance in their supply chains. Supplier development (SD) by the virtue of bringing performance improvement is a core element in implementing CSR. However, research at the intersection of CSR, Supply Chain Management (SCM) and supplier development rarely give insights into the interactions between economic and social performance in supply chains.

The main aim of this dissertation is to bring three different streams of literature (CSR, SCM and SD) and provide conceptual and empirical insights while investigating the role of SD as CSR in achieving performance improvements. Firstly, a conceptual framework based on the literature review is proposed providing more in-depth comprehension of CSR in supply chain. Secondly, based on the previous framework, a conceptual framework focusing on supplier development is proposed adding to the understanding of buyer-supplier relationships and its impact on performance outcomes. Finally empirical investigations into the Dairy supply chain in India using the constructs from these two frameworks, provide insights into the role of SD as CSR. Thus, this dissertation provides insights into the management of social issues in supply chains and makes valuable contributions at the intersection of CSR, SCM and SD.

This research anthology explores the concept of food production and supply, from farm gate to plate, bringing together contemporary thinking and research on local, national, and global issues from a stakeholder perspective. A Stakeholder Approach to Managing Food includes a number of sections to represent these challenges, opportunities, conflicts, and cohesions affecting relevant stakeholder groups within food production and supply and their reaction to, engagement with, and co-creation of the food environment. For some, local, national, and global interests may seem at odds. We are in an era of growing and pervasive multi-national corporations, and these corporations have significant influence at all levels. Rapidly growing economies such as China are a focus for the global brand, but is this a scenario of adaptation or homogenization of food? Alongside this trend toward national and global development in food, this volume presents the counter-reaction that is taking place (especially in developed countries) toward local speciality and culturally bound foods, with emphasis on the importance of the inter-connection of local communities and agri-food culture and economy. With an in-depth analysis of agricultural businesses, this book shows that the entrepreneurial spirit is alive and well in rural communities with often renewed and engaged connection with consumers and imaginative use of new media. This book will be of interest to students, researchers and policy-makers concerned with agriculture, food production and economics, cultural studies.

Japanese semiconductor firms are well known for obtaining dynamics in a short period of time and achieving even global leadership. A significant portion of their success are attributable to cooperative interfirm relations and the development of intermediate organizational structure based on long-term relationship between firms. The purpose of this book is to explain how interfirm relations contributed to their dynamics during the golden age of the semiconductor industry. Meanwhile this book clarifies the real source of dynamics in interfirm relations and how the firms have interacted. The author concludes that the competitive-cum-cooperative (CCC) interfirm interaction are observed. Quantitative and qualitative findings show that firms enjoy not only flexible cooperation based synergy effects, but also dynamics market-like effects by creating competition among partners through CCC interaction.

CMMI® for Acquisition (CMMI-ACQ) describes best practices for the successful acquisition of products and services. Providing a practical framework for improving acquisition processes, CMMI-ACQ addresses the growing trend in business and government for organizations to purchase or outsource required products and services as an alternative to in-house development or resource allocation. Changes in CMMI-ACQ Version 1.3 include improvements to high maturity process areas, improvements to the model architecture to simplify use of multiple models, and added guidance about using preferred suppliers. CMMI® for Acquisition, Second Edition, is the definitive reference for CMMI-ACQ Version 1.3. In addition to the entire revised CMMI-ACQ model, the book includes updated tips, hints, cross-references, and other author notes to help you understand, apply, and quickly find information about the content of the acquisition process areas. The book now includes more than a dozen contributed essays to help guide the adoption and use of CMMI-ACQ in industry and government. Whether you are new to CMMI models or are already familiar with one or more of them, you will find this book an essential resource for managing your acquisition processes and improving your overall performance. The book is divided into three parts. Part One introduces CMMI-ACQ in the broad context of CMMI models, including essential concepts and useful background. It then describes and shows the relationships among all the components of the CMMI-ACQ process areas, and explains paths to the adoption and use of the model for process improvement and benchmarking. Several original essays share insights and real experiences with CMMI-ACQ in both industry and government environments. Part Two first describes generic goals and generic practices, and then details the twenty-two CMMI-ACQ process areas, including specific goals, specific practices, and examples. These process areas are organized alphabetically and are tabbed by process area acronym to facilitate quick reference. Part Three provides several useful resources, including sources of further information about CMMI and CMMI-ACQ, acronym definitions, a glossary of terms, and an index.

In the industrial world, companies are always seeking competitive advantages to sustain themselves in the globalized market. Fierce competition in many industries, megatrends, the COVID-19 pandemic, the ongoing globalisation and the permanent liberalisation of markets have changed the face of economies and businesses drastically. Companies must establish suitable and long-term strategies and performance criteria in order to survive in this dynamic and hostile environment. This book provides a holistic and practical approach to strategic performance management. It combines all functions of the value chain and contains best practices in performance. The author demonstrates how new paradigms enable companies to concentrate on value-adding activities and processes to achieve a long-term sustainable and competitive advantage. The book contains a variety of best practices, industry examples and case studies. Focusing on best-in-class examples, the book offers the ideal guide for any enterprise to achieve a competitive advantage across all business functions focusing on value-adding activities.

This is the ground-breaking new book for aspiring purchasing and supply chain leaders and anyone with a keen interest in this rapidly evolving field. For too long business has focused on short-term cost advantages through low-cost country sourcing with little regard for the longer-term implications of global sustainability. As the first book to fully address the environmental, social and economic challenges of how companies manage purchasing and supply chains, it aims to inspire the development of current and future purchasing and supply chain leaders. In addition to explaining the basic principles and processes of both purchasing and supply chain management, the book evaluates how to develop strategic and sustainable purchasing and supply chain management. A key message is that purchasing and supply chain management needs to focus on value creation rather than cost cutting. This requires the development of completely new purchasing and supply chain models that involve closed-loop supply structures, supply chain transparency and collaboration with new stakeholders in traditional sourcing and supply chain processes. Aimed at students, educators and practitioners the book integrates sustainability into each chapter as a core element of purchasing and supply chain management. Incorporating case studies from industry into each chapter, the book strikes a balance between theoretical frameworks and guidelines for implementation in practice.

This publication presents a methodology for planning sustainable supply chain initiatives, consisting of three scopes, each with its appropriate mechanism and background theory. The first one "Acting In" structures organizational practices in a "Framework for Managing Sustainable Supply Chain Practices". The second scope "Acting Out" compares practices from 32 recognized sustainability leaders from five different industries through a "Benchmarks Practices Bank". The third scope "Acting Beyond" supports defining and managing a portfolio of sustainable supply chain practices through a "Practices Portfolio Planning Matrix" which provides a list of opportunities for the exchange of knowledge between Germany and Brazil. The methodology significantly supports supply chain decision makers in planning initiatives and visualizing collaboration opportunities within a firm, industry and shared value chain perfective. As companies become more global, challenges also become greater, thus, a more systematic and holistic approach can lead the way for developing more innovative solutions. In der folgenden Doktorarbeit wird eine Methodologie zur Planung von Nachhaltigkeitsinitiativen im Bereich Supply Chain entwickelt, die aus drei Haupthandlungsfeldern besteht und für welche jeweils der theoretische Hintergrund, sowie geeignete Mechanismen aufgezeigt werden. Der erste Bereich, das sog. „Acting In", strukturiert organisatorische Tätigkeiten und integriert diese in einen Rahmen, dem „Framework for Managing Sustainable Supply Chain Practices". Der zweite Bereich – „Acting Out" – vergleicht verschiedene Verfahren von 32 anerkannten, im Bereich Nachhaltigkeit führenden Unternehmen mit Hilfe der Datenbank "Benchmarks Practices Bank". „Acting Beyond" – der dritte Bereich – hilft dabei ein Portfolio mit nachhaltigen Maßnahmen im Supply Chain Bereich zu definieren. Hierfür wird die "Practices Portfolio Planning Matrix" eingeführt, welche gleichzeitig interessante Möglichkeiten zum Wissensaustausch zwischen Deutschland und Brasilien aufzeigt. Die erarbeitete Methodik ist sowohl für die Forschung, als auch für die Anwender im Supply Chain Bereich von großer Bedeutung. Die hier entwickelten Mechanismen unterstützen die Entscheider in den Unternehmen bei der Planung von Nachhaltigkeitsinitiativen im Supply Chain Bereich und verdeutlichen Kooperationsmöglichkeiten auf verschiedenen Ebenen: innerbetrieblich, auf derselben Wertschöpfungsstufe und über die gesamte Wertschöpfungskette hinweg. Da die Unternehmen immer globaler agieren, werden die Herausforderungen größer. Daher kann eine systematischere, ganzheitlichere Herangehensweise ein Ansatz sein, wenn es um die Entwicklung von innovativen Lösungen geht.

Understanding supplier performance is vital to ensuring a well-functioning supply network. This how-to book will help you develop and implement an evaluation process to help you reduce costs, lower risk, and improve both the performance of your company and your suppliers. This practical text includes examples of best practices that companies are using to evaluate suppliers and illustrates how to get beyond collecting data for the sake of data to achieving real results. It shows how to get at the meaning behind the metrics, and choose measurements that are meaningful both in the context of your company's goals and also for the supplier. Supplier Evaluation and Performance Excellence helps you get at the root causes of supplier problems that even suppliers may be unaware of and enable suppliers to make high-impact improvements. Many firms do not know where to begin in the supplier evaluation process, what ways would work best, or even what kind of results they want to get. They know that they should be measuring supplier performance, but may not understand why or what they would gain from it. This book is geared toward managers at two types of companies: those who know that they should be measuring supplier performance but don't know where to start, and companies who want ideas about how to improve or revitalize a current program.

Corporate responsibility is considered an oxymoron by much of society. Corporations are among the least trusted of our institutions; and the 2008 financial crisis, BP's oil spill in the Gulf of Mexico, and the collapse of the house of cards that was Enron have only added to public skepticism. So, at a time when trust in corporations has reached an all-time low, why is interest in corporate responsibility at an all-time high? A plausible explanation is that increasing numbers of stakeholders are demanding responsibility from corporations. Hyper-transparency of corporate activities, fueled by disclosure laws and the Internet, has increased awareness to the point where corporate behavior is under constant scrutiny. Smart business leaders are aware of this scrutiny and of the high costs of a public scandal. They know that in the long run it is cheaper to act responsibly now than to dig out from a PR disaster later. Tim Mohin is a veteran corporate responsibility practitioner who has led programs at Apple, Intel, and AMD. In this book, Tim tells us why he believes he is making a difference where it counts and how others can do the same. His book is a manual on how to steer the corporate supertanker toward doing good for people and our planet. Changing Business from the Inside Out provides a fascinating roadmap to the corporate responsibility and sustainability field, from beginning a career, to forming a program, to navigating the complicated politics of a corporation. Mohin likens the corporate treehugger role to "being the designated driver at the corporate cocktail party". Throughout his book, he argues strongly that activists can accomplish more for the planet and society by serving as a voice of responsibility within the corporation rather than protesting outside the factory gates. Corporations are clearly the drivers of the world economy, and the corporate responsibility practitioner has an essential role in bringing ethical and sustainable values to the C-suite and making sure that they are accomplished. Whether you are a practitioner needing advice, a mid-career professional wanting to change course, or an MBA wondering how to incorporate responsibility into your career, this book has the answers you need.
