Fully revised and updated since its first publication in 2011 to encompass further appalling instances of wilful blindness: Grenfell Tower, Carillion, Harvey Weinstein, Windrush and many more 'Entertaining and compellingly argued' Sunday Times 'A tour de force of brilliant insights' Philip Zimbardo 'A polemic against the dangers of docility and "groupthink" in every walk of life' Books of the Year, Financial Times 'Writing in clear, flowing prose, Heffernan draws on psychological and neurological studies and interviews with executives, whistleblowers and white-collar criminals' New York Times 'An engaging read, packed with cautionary tales ... Heffernan shows why we close our eyes to facts that threaten our families, our livelihood, and our self-image – and, even better, she points the way out of the darkness' Daniel H. Pink, author of Drive and A Whole New Mind? Why, after every major accident and blunder, do we look back and ask, how could we have been so blind? Why do some people see what others don't? And how can we change? Drawing on studies by psychologists and neuroscientists, and from interviews with business leaders, whistle blowers and white collar criminals, distinguished businesswoman and writer Margaret Heffernan examines the phenomenon of wilful blindness, exploring the reasons that individuals and groups are blind to impending personal tragedies, corporate collapses, engineering failures – even crimes against humanity. We turn a blind eye in order to feel safe, to avoid conflict, to reduce anxiety and to protect prestige. It makes us feel good at first, with consequences we don't see. But greater understanding leads to solutions, and Heffernan shows how – by challenging our biases, encouraging debate, discouraging conformity, and not backing away from difficult or complicated problems – we can be more mindful of what's going on around us and be proactive instead of reactive.

She was a poor Southern tobacco farmer who worked the same land as her slave ancestors, yet her cells—taken without her knowledge—became one of the most important tools in medicine: The first “immortal” human cells grown in culture, which are still alive today, though she has been dead for more than sixty years. HeLa cells were vital for developing the polio vaccine; uncovered secrets of cancer, viruses, and the atom bomb’s effects; helped lead to important advances like in vitro fertilization, cloning, and gene mapping; and

*have been bought and sold by the billions. Yet Henrietta Lacks remains virtually unknown, buried in an unmarked grave. Henrietta's family did not learn of her "immortality" until more than twenty years after her death, when scientists investigating HeLa began using her husband and children in research without informed consent. And though the cells had launched a multimillion-dollar industry that sells human biological materials, her family never saw any of the profits. As Rebecca Skloot so brilliantly shows, the story of the Lacks family—past and present—is inextricably connected to the dark history of experimentation on African Americans, the birth of bioethics, and the legal battles over whether we control the stuff we are made of. Over the decade it took to uncover this story, Rebecca became enmeshed in the lives of the Lacks family—especially Henrietta's daughter Deborah. Deborah was consumed with questions: Had scientists cloned her mother? Had they killed her to harvest her cells? And if her mother was so important to medicine, why couldn't her children afford health insurance? Intimate in feeling, astonishing in scope, and impossible to put down, *The Immortal Life of Henrietta Lacks* captures the beauty and drama of scientific discovery, as well as its human consequences.*

This pioneering text provides a holistic approach to decisionmaking in transportation project development and programming, which can help transportation professionals to optimize their investment choices. The authors present a proven set of methodologies for evaluating transportation projects that ensures that all costs and impacts are taken into consideration. The text's logical organization gets readers started with a solid foundation in basic principles and then progressively builds on that foundation. Topics covered include: Developing performance measures for evaluation, estimating travel demand, and costing transportation projects Performing an economic efficiency evaluation that accounts for such factors as travel time, safety, and vehicle operating costs Evaluating a project's impact on economic development and land use as well as its impact on society and culture Assessing a project's environmental impact, including air quality, noise, ecology, water resources, and aesthetics Evaluating alternative projects on the basis of multiple performance criteria Programming transportation investments so that resources can be optimally allocated to meet facility-specific and system-wide goals Each chapter begins with basic definitions and concepts followed by a methodology for impact assessment. Relevant legislation is discussed and available software for performing evaluations is presented. At the end of each chapter, readers are provided resources for detailed investigation of particular topics. These include Internet sites and publications of international and domestic agencies and research institutions. The authors also provide a companion Web site that offers updates, data for analysis, and case histories of project evaluation and decisionmaking. Given that billions of dollars are spent each year on transportation systems in the United States alone, and that there is a need for thorough and rational evaluation and decision making for cost-effective system preservation and improvement, this text should be on the desks of all transportation planners, engineers, and educators. With exercises in every chapter, this text is an ideal coursebook for the subject of transportation systems analysis and evaluation.
