Education in Zambia

Master's Thesis from the year 2020 in the subject Pedagogy - School Pedagogics, University of Zambia (Postgraduate studies), course: Master of Mathematics Education, language: English, abstract: The study explored teachers' classroom practices in addressing learners' errors regarding how they engaged grade eight learners in reading; how they probed learners' understanding; and what they did to enhance learners' process skills and encoding abilities in algebraic word problems. Five teachers and twenty five learners (in five focus groups discussions of five members each), at three secondary schools in Isoka district of Muchinga province, Zambia were purposively sampled to participate in the study. The study used a qualitative approach which followed a descriptive case study design. Data collection was done using lesson observations, semi-structured interviews, document analysis and focus group discussions. To capture observations and interviews in totality, video and audio recordings were used respectively. Thematic analysis was used to analyse data. The five performance strategies of solving word problems by Newman namely; reading ability, comprehension ability, transformation ability, process skills and encoding ability guided the analysis of data. The study was guided by the following research questions: How do teachers engage learners in reading algebraic word problems? How do teachers probe learners' understanding of algebraic word problems? What do teachers do to enhance learners' process skills and encoding abilities in algebraic word problems?

International Histories of Psychological Assessment

Education in Zambia, 2002

The twelfth edition of the EFA Global Monitoring Report marking the 2015 deadline for the six goals set at the World Education Forum in Dakar, Senegal, in 2000 provides a considered and comprehensive accounting of global progress. As the international community prepares for a new development and education agenda, this report takes stock of past achievements and reflects on future challenges. There are many signs of notable advances. The pace towards universal primary education has quickened, gender disparity has been reduced in many countries and governments are increasing their focus on making sure children receive an education of good quality. However, despite these efforts, the world failed to meet its overall commitment to Education for All. Millions of children and adolescents are still out of school, and it is the poorest and most disadvantaged who bear the brunt of this failure to reach the EFA targets.
