The European Space Agency has a long history of human spaceflight, working with both NASA and the Soviet/Russian space agencies over the years. This book tells the story of the ESA astronauts who have visited the International Space Station and their contributions to its development and success. For example, ESA built the Columbus science laboratory, as well as the Cupola, the Leonardo PMM and the ATV supply ship. But it is the human endeavor that captures the imagination. From brief visits to six-month expeditions and spacewalking

to commanding Earth's only outpost in space and doing experiments, ESA astronauts — whose personal stories are also told — have played a vital role in the international project. Many of their efforts are documented in photographs in the book. In following up on the missions covered in this author's earlier title, *In the Footsteps of Columbus* (2016), this book highlights European missions from the 2013 *Volare* mission of Luca Parmitano to his 2019 *Beyond* mission and includes first flights for Alexander Gerst, Samantha Cristoforetti, Andreas Mogensen, Tim Peake, and Thomas Pesquet.

generations were once again reunited. These new mouths to feed and house soon became a burden on the land and the people to the south. A rift had grown between the Twin Suns system and the Sol system. The Council of Elders said that Karl Artuso and all off worlders were to leave their planet. The younger generation where grown and it was their time to chose their paths. Many had joined the Space Rangers to help the Sol system defend themselves from the pirates that were attacking the shipping trade. Others had attended the school in the Blue Mountain and were trying to change the planet for a better future. Little did they know that their nemesis was about to return.

Expedition Britannic is an insight into the art of deep wreck diving which features incredible original photographs of the largest ocean liner on the seabed. What does it take to dive Titanic's sister ship? This huge vessel from a bygone golden age of ocean travel lies at over 100 metres (330') below the surface. It is not a dive for the faint-hearted. Requiring meticulous planning, precise execution and good conditions, only the most capable technical divers will ever experience it. Even then, tragically some do not make it back to the surface. Expedition Britannic is the story of the May 2019

mission to dive the Olympic-class liner-turned-hospital ship, HMHS Britannic. Sunk near the Greek island of Kea during World War I, she will only be ticked off the bucket list of relatively few of the most dedicated deep divers. Steeped in history, the opportunity to see a largely intact near-replica of the world's most famous ocean liner makes it an ultimate dive to aspire to. Deep wreck photography specialist Rick Ayrton is one such diver. Assisted by expedition leader Scott Roberts, he takes us through the planning, logistics and preparation essential for scaling one of the pinnacles of wreck diving. Then we explore the wreck with him — going deeper than most divers will in their lifetimes to photograph this once great ship — and make new discoveries.

Reviews of Expedition Britannic A cracking book that will be of interest to any diver, and many others. From my perspective, if I need to persuade anyone why I love deep diving then I'll simply hand them a copy and wait for them to ask how they can sign up.

SCUBA magazine. Expedition Britannic brings armchair divers closer than we've ever been to this magnificent wreck and perhaps will inspire one or two to get out of their armchair and experience it for themselves. Encyclopaedia Titanica. If you have read detailed reports of group technical-diving trips before, this has something in common with those but it is done extremely well. The writing is crisp, well-organised and doesn't get bogged down in needless detail. While

it doesn't seem to be making concessions, it is readily accessible to any level of diver or even non-divers. And bringing it further to life, the photography from depth is way beyond what we usually expect, thanks to Ayrton's dedication to his craft. Diver magazine. Expedition Britannic will appeal to recreational divers who look up (or rather, down) in awe at our technical cousins; it will appeal to technical divers wishing to see how it was done; and it will certainly appeal to White Star line aficionados who want a fresh look at how Britannic appears today. "Your problem is you don't know your problem." - the response Manthan Desai, a young engineer, got while seeking advice from his favourite professor about implementing Six Sigma, a breakthrough business improvement strategy to fix the chronic problem of late deliveries at his company, Minewell Pvt. Ltd. "We are a corporate house, not a research and development institute and profits matter here, not the discoveries." - and this was the reaction of the MD of

Minewell Pvt. Ltd. to Desai's sincere efforts to move the firm out of the crisis by experimenting with Six Sigma methodology. Apart from embracing a tough mission of developing critical products of mining machinery as his first professional assignment, full of challenges and complexities coupled with life-threatening experiences at highly uncomfortable and dangerous mining fields, Desai, our young engineer, also encounters with Minewell's chronic problem of late deliveries. They are miserably failing to maintain the delivery commitments made to their customers. He experiments with Six Sigma breakthrough business improvement strategy to save the jeopardizing business of Minewell, first by understanding the theory and then convincing the company

In November 1915, Sir Ernest Shackleton watched horrified as the grinding floes of

the Weddell Sea squeezed the life from his ship, Endurance, before letting her slip silently down to her last resting place. Caught in the chaos of splintered wood, buckled metalwork and tangled rigging lay Shackleton's dream of being the first man to complete the crossing of Antarctica. Shackleton would not live to make a second attempt – but his dream lived on. Shackleton's Dream tells for the first time the story of the British Commonwealth Trans-Antarctic Expedition, led by Vivian Fuchs and Sir Edmund Hillary, the conqueror of Everest. Forty years after the loss of Endurance, they set out to succeed where Shackleton had so heroically failed. Using motor-sledges and converted farm tractors in place of Shackleton's man-hauled sledges, they faced a colossal challenge: a perilous 2,000-mile journey across the most demanding landscape on the the planet,

where temperatures can plunge to a staggering -129°F and bitter katabatic winds rush down from the high Polar Plateau carrying dense clouds of drift snow, which blind and disorientate. This epic adventure saw two giants of twentieth century exploration pitted not only against Nature at her most hostile, but also against each other. From their coastal bases on opposite sides of Antarctica, the two leaders pushed south relentlessly, dodging bottomless crevasses and traversing vast, unexplored tracts of wind-sculpted ice. Planned as an historic (and scientific) continental crossing, the expedition would eventually develop into a dramatic ‘Race to the South Pole’ – a contest as controversial as that of Scott and Amundsen more than four decades earlier.
