Mongsen Ao is a highly agglutinating, mostly suffixing language with predominantly dependent-marking characteristics. Its grammar demonstrates a number of typologically

interesting features that are described in detail in the book.

Among these is an unusual case marking system in which grammatical marking is motivated by semantic and pragmatic factors, and a rich verbal morphology that produces elaborate sequences of

agglutinative suffixes.

Grammaticalisation processes are also discussed where relevant, thereby extending the appeal of the book to linguists with interests in grammaticalisation theory. This book will be of value to any linguist seeking to clarify genetic relationships within

Natural languages offer many examples of displacement, i.e. constructions in which a non-local expression is critical for some grammatical end. Two central examples include phenomena such as raising and passive on the one hand, and

Read Free

control on the other.

Though each phenomenon is an example of displacement, they have been theoretically distinguished. Movement rules have generated the former and formally very different construal rules, the latter. The "Movement Theory of Control" challenges this differentiation and

argues that the operations that generate the two constructions are the same, the differences arising from the positions through which the displaced elements are moved. In the context of the Minimalist Program, reducing the class of basic operations is methodologically prized. This volume is a collection of original
