On the morning of
the second of May,
1519, Leonardo Da
Vinci,
unquestionably the

greatest of geniuses
in the intellectually
congested

Renaissance, was
laid to rest in a

churchyard on the
castle grounds of
Amboise, the

fortress/estate of
Francis the first, the
reigning king of
France. Francis, an
ardent admirer of

Leonardos artistic
and scientific
achievements, had
invited the Maestro
to Amboise where
he was to serve as
the kings production
designer for court
events. For this
service Leonardo
was given quarters
in the magnificent
manor house Le

Clos Luce within the castle grounds, together with servants and room and board for life. In 1517, he suffered a stroke that paralyzed his right arm, thus ending his phenomenal artistic career. Even though he was preferentially left-

handed, his spirit
was broken. His
notebooks and last
paintings were left in
his will to his

devoted disciple
Francesco Melzi, all
except his beloved
Mona Lisa. His
modest funeral
procession was
attended by a few
remaining house

servants,
caretakers, priests,
townspeople whom
he had befriended,
and of course,

Melzi. In the
following centuries,
his burial ground
was desecrated by
a succession of
wars, notably the
Huguenot uprising
and the French

Revolution, and the inevitable grave robbers. His remains became commingled and scattered. Several attempts were made by an eclectic group of Da Vinciophiles to gather what might plausibly be Leonardos bones. Some, including a

relatively large skull,
were so anointed
and were

transferred to the
newly reconstructed
and rechristened

Hubert to this day
Leonardos shrine.
On the floor of the
chapel is a tableau
with an inscription
stating that herein

might possibly
repose the remains
of Leonardo Da
Vinci. But no one
could really tell . . .
until now.

ICIAR 2006, the
International
Conference on
Image Analysis and
Recognition, was
the third ICIAR
conference, and

Get Free Facial Geometry Graphic Facial Analysis

was held in Póvoa
de Varzim, Portugal.
ICIAR is organized an-
nually, and alternates
between Europe and
North America.

ICIAR 2004 was
held in Porto,
Portugal and ICIAR
2005 in Toronto,
Canada. The idea of
offering these
conferences came

Get Free Facial Geometry Graphic Facial Analysis

as a result of
discussion between
researchers in
Portugal and
Canada to
encourage
collaboration and
exchange, mainly be
tween these two count
ries, but also with the o
pen participation of o
ther countries,
addressing recent

advances in theory,
methodology and
applications. The

response to the call
for papers for ICIAR
2006 was higher

than the two
previous editions.

From 389 full
papers submitted,
163 were finally
accepted (71 oral
presentations, and

92 posters). The review process was carried out by the Program Committee members and other reviewers; all are experts in various image analysis and recognition areas. Each paper was reviewed by at least two reviewers, and also checked by the

conference Co-
chairs. The high
quality of the papers
in these

proceedings is
attributed first to the
authors, and second
to the quality of the
reviews provided by
the experts. We
would like to thank
the authors for
responding to our

call, and we wholeheartedly thank the reviewers for their excellent work and for their timely response. It is this collective effort that resulted in the strong conference program and high-quality proceedings in your hands.

Biometrics-based

authentication and
identification are
emerging as the
most reliable
method to

authenticate and
identify individuals.
Biometrics requires
that the person to
be identified be
physically present at
the point-of-
identification and

relies on something
which you are or
you do' to provide
better security,
increased efficiency,
and improved
accuracy.

Automated
biometrics deals
with physiological or
behavioral
characteristics such
as fingerprints,

signature, palmprint,
iris, hand, voice and
face that can be

used to authenticate
a person's identity

or establish an

identity from a

database. With

rapid progress in

electronic and

Internet commerce,

there is also a

growing need to

authenticate the
identity of a person
for secure
transaction
processing.

Designing an
automated
biometrics system to
handle large
population
identification,
accuracy and
reliability of

authentication are
challenging tasks.

Currently, there are
over ten different

biometrics systems
that are either

widely used or
under development.

Some automated
biometrics, such as
fingerprint
identification and
speaker verification,

have received
considerable
attention over the
past 25 years, and
some issues like
face recognition and
iris-based
authentication have
been studied
extensively resulting

various locations

of a specific face
with relative ease. It
is this level of detail
that researchers are
striving to create
with ever evolving
computer

that confronts
researchers stems
from turning a 3D

is covered in depth
from several
different
perspectives in this
volume. Face

description of the state-of-the-art of 3D shape analysis techniques

and their applications

This book discusses the different topics that come under the title of "3D shape analysis". It covers the theoretical foundations and the major solutions that have been presented in the literature. It also establishes links

between solutions proposed by different communities that studied 3D shape, such as mathematics and statistics, medical imaging, computer vision, and computer graphics. The first part of 3D Shape Analysis:

Fundamentals,
Theory, and
Applications provides

a review of the background concepts such as methods for the acquisition and representation of 3D geometries, and the fundamentals of geometry and topology. It specifically covers stereo matching, structured light, and intrinsic vs. extrinsic properties of shape. Parts 2 and 3

Both also place strong emphasis on recent techniques motivated by the spread of commodity devices for 3D acquisition. Part 4 demonstrates the use of these techniques in a selection of 3D shape analysis applications. It covers 3D face recognition, object recognition in 3D scenes, and 3D shape

retrieval. It also discusses examples of semantic applications and cross domain 3D retrieval, i.e. how to retrieve 3D models using various types of modalities, e.g. sketches and/or images. The book concludes with a summary of the main ideas and discussions of the future trends.
