

## *Factors Affecting Adoption Of Electronic Banking An*

**Small and medium-sized enterprises (SMEs) play a critical role in rejuvenating and sustaining the modern economy, generating substantial employment and serving as important innovation engines for the global economy. Global Perspectives on Small and Medium Enterprises and Strategic Information Systems: International Approaches aims to spread research conducted on SMEs internationally and place it at the disposal of academics, practitioners, consultants, the vendor community, and policymakers. The goal of this book is to highlight the challenges faced by SMEs and how they are coping with the adverse environment through skillful use of IT and technologies such as Web 2.0, Enterprise Resource Planning (ERP), e-commerce, open source software, Business Process Digitization (BPD), and other emerging technologies.**

**This book aims to study the factors effecting the adoption and diffusion of Health Information Technology (HIT) innovation. It analyses the adoption processes of various tools and applications, particularly Electronic Health Records (EHR), highlighting the impact on various sectors of the healthcare system, such as physicians, administration and patient care, while also identifying the various pitfalls and gaps in the literature. With the various challenges currently facing the United States healthcare system, the study, adoption and diffusion of healthcare technology innovation, particularly HIT, is imperative to achieving national goals. This book is organized into three sections. Section one reviews theories and applications for the diffusion of Health Care Technologies. Section two evaluates EHR technology, including the barriers and enablers in adoption and alternative technologies. Finally, section three examines the factors impacting the adoption of EHR systems. This book will be a key source for students, academics, researchers, practitioners, professionals and policy-makers.**

**An Electronic Health Record system helps improve medical care and save lives by eliminating medical errors and providing up-to date patient data. However, developing countries are slow in adopting EHR systems despite the huge benefits. Identifying factors affecting the adoption of EHR systems is crucial to manage and overcome the barriers faced in developing countries. This book investigates Factors that are affecting the adoption of EHR systems in medium scale hospitals in Sri Lanka. It further proposes a model for adoption of EHR.**

**Electronic Health Records and Other Emerging Health Information Technology Innovations**

The 13th International Conference on Human-Computer Interaction, HCI International 2009, was held in San Diego, California, USA, July 19-24, 2009, jointly with the Symposium on Human Interface (Japan) 2009, the 8th International Conference on Engineering Psychology and Cognitive Ergonomics, the 5th International Conference on Universal Access in Human-Computer Interaction, the Third International Conference on Virtual and Mixed Reality, the Third International Conference on Internationalization, Design and Global Development, the Third International Conference on Online Communities and Social Computing, the 5th International Conference on Augmented Cognition, the Second International Conference on Digital Human Modeling, and the First International Conference on Human Centered Design. A total of 4,348 individuals from academia, research institutes, industry and governmental agencies from 73 countries submitted contributions, and 1,397 papers that were judged to be of high scientific quality were included in the program. These papers address the latest research and development efforts and highlight the human aspects of the design and use of computing systems. The papers accepted for presentation thoroughly cover the entire field of human-computer interaction, addressing major advances in knowledge and effective use of computers in a variety of application areas.

Introduction of internet-based electronic commerce contributes significant opportunities for large and small firms to grow their business from customer base perspective, introducing innovative products and rationalise their businesses by competing in the global economy. It has been a slow initiative for small, medium and micro enterprises (SMMEs) to adopt and evaluate electronic commerce. Many SMMEs have been unsuccessful in achieving the levels of adoption required to appreciate the benefits associated with e-commerce during the developmental stages of operations. The study's purpose is to investigate the factors that affect the adoption/ non-adoption of e-commerce in SMMEs.

Annotation New edition of a study of the law of electronic commerce, which requires the simultaneous management of business, technology and legal issues. Winn (law, Southern Methodist U.) and Wright (a business lawyer in Dallas) present 21 chapters that discuss introductory material such as business and technologies of e-commerce, getting online, jurisdiction and choice of law issues, and electronic commerce and law practice; contracting; electronic

payments and lending; intellectual property rights and rights in data; regulation of e-business markets; and business administration. Presented in a three-ring binder. Annotation c. Book News, Inc., Portland, OR (booknews.com)

Small Business Management and Control of the Uncertain External Environment

*As financial systems migrate to a pervasive, online environment, business leaders and layman investors alike must adapt to changes in the market brought about by this new age of business. Strategic E-Commerce Systems and Tools for Competing in the Digital Marketplace advances the body of knowledge on electronic business and commerce with an in-depth look at the opportunities and concerns surrounding online business and finance. This cutting-edge reference aids business leaders, financial managers, investors, and consumers looking to build their portfolios and thrive in modern digital business environments.*

*"This book is a collection of knowledge on contemporary experiences on technological, societal and legal setups of e-Government implementation in emerging economies"--Provided by publisher.*

*E-government is the use of information and communication technologies, especially the Internet and World Wide Web, to improve the efficiency, cost and quality of the government services and information provided to its stakeholders: citizens as well as businesses, employees and other government agencies. However, despite the governments' growing investment in electronic services, at both national and local government levels, e-government research results present evidence of low-level citizen adoption of e-government services. Therefore, this book aims to discuss issues related to e-government adoption in developing countries. Particularly, this book investigates citizen adoption of e-government and explores factors affecting the level of adoption of e-government services. Importantly, this book develops a conceptual framework that is based on previous literature of Technology Acceptance Model in order to examine the relationships between certain factors (government trustworthiness, culture and perceived public value) and citizen adoption of e-government services. Target audience for this book includes students, researchers and practitioners in the field of e-government.*

Decision Factors Affecting the Adoption of Electronic Data Processing Banks in Lebanon

With the widespread knowledge and use of e-government, the intent and evaluation of e-government services continues to focus on meeting the needs and satisfaction of its citizens. E-Government Services Design, Adoption, and Evaluation is a comprehensive collection of research on assessment and implementation of electronic/digital government technologies in organizations. This book aims to supply academics, practitioners and professionals with the understanding of e-government and its applications and impact on organizations around the world.

*"This book provides researchers readers with a synthesis of current research on developing countries experience with e-commerce"--Provided by publisher.*

Knowledge management principles, strategies, models, tools, and techniques have been proven in government, business, and industry. More recently, knowledge management has emerged as an essential enabler for the successful pursuit of scholarly activities in higher education. Knowledge management has significant contributions to make in capturing, storing, processing, and disseminating knowledge between and across these stakeholder entities and their processes to better support these interrelated processes and activities. Given the impetus provided by the United Nations Global Knowledge Economy Policy, institutions worldwide are actively pursuing the use of knowledge management in all facets of social and economic development. The importance of knowledge management research and application in academia is a critical element of this multifaceted endeavor. *Enhancing Academic Research and Higher Education With Knowledge Management Principles* is a compendium of cutting-edge research on the use of knowledge management in higher education and provides original, theoretical, and application-oriented research within this domain. The book will also provide insights on the management of expertise, knowledge, information, and organizational development in different types of work communities and environments. By including research on global perspectives, the implementation of knowledge management at universities, current trends in the field, and the results, this book is a valuable reference work for professionals and researchers working in the field of information and knowledge management in various disciplines, and academics, analysts, developers, students, technologists, education consultants, higher education administrators, academicians, stakeholders, and practitioners seeking to learn, improve, and expand their theoretical and applied knowledge of knowledge management tools and techniques, models, processes, and systems in higher education.

Written for students taking research methods courses, this text provides a thorough overview of sampling principles. The author gives detailed, nontechnical descriptions and guidelines with limited presentation of formulas to help students reach basic research decisions, such as whether to choose a census or a sample, as well as how to select sample size and sample type. Intended for students and researchers in the social and behavioral sciences, public health research, marketing research, and related areas, the text provides nonstatisticians with the concepts and techniques they need to do quality work and make good sampling choices.

**Adoption of Electronic Health Records**

**Emerging Markets and E-Commerce in Developing Economies**

**Disruptive Technology: Concepts, Methodologies, Tools, and Applications**

**E-Government Adoption in Developing Countries**

**Global Perspectives on Small and Medium Enterprises and Strategic Information Systems: International Approaches**

*The proliferation of entrepreneurship, technological and business innovations, emerging social trends and lifestyles, employment patterns, and other developments in the global context involve creative destruction that transcends geographic and political boundaries and economic sectors and industries. This creates a need for an interdisciplinary exploration of disruptive technologies, their impacts, and their implications for various stakeholders widely ranging from government agencies to major corporations to consumer groups and individuals. *Disruptive Technology: Concepts, Methodologies, Tools, and Applications* is a vital reference source that examines innovation, imitation, and creative destruction as critical factors and agents of socio-economic growth and progress in the context of emerging challenges and opportunities for business development and strategic advantage. Highlighting a range of topics such as IT innovation, business strategy, and sustainability, this multi-volume book is ideally designed for entrepreneurs, business executives, business professionals, academicians, and researchers interested in strategic decision making using innovations and competitiveness.*

*Embarking on electronic business is a challenging task. There is also a lack of clear understanding and comprehensive analysis of various issues and domains of electronic business. This book offers a very comprehensive analysis of concepts, models and infrastructures of e-business. It also presents unique observations of current e-business practices for different organizations in different economies and provides insights on the future of current leading businesses on the net and the trends of e-business. The volume will be an effective and indispensable reference book for professionals who are interested in or dealing with e-business and businesses that are embarking on e-business. Sample Chapter(s). Introduction (106 KB). Chapter 1: Overview-Part I: Foundation of E-Business and E-Business Technologies (318 KB). Contents: Overview of Current Status of E-Business: Overview-Part I: Foundation of E-Business and E-Business Technologies (J Xu & M Quaddus); Overview-Part II: B2C, B2B and Other Types of E-Business (J Xu & M Quaddus); Studies of E-Business Issues and Challenges: Factors Influencing Online Auction Adoption: A China Study (M Quaddus & J Xu); Factors Influencing Online Advertising: A National Survey Among Small & Medium Enterprises in Australia (J Heiligtag et al.); E-Learning in Emerging Countries: Case Studies of Republic of Tunisia, the Kingdom of Saudi Arabia, and People's Democratic Republic of Algeria (I B Dhaou & F Abdessemed); Consumers' Adoption of Electronic Ticketing: An Application in the Air Travel Industry in Tunisia (A Allagui & M S B Mimoun); Success Factors of E-Tailing: A China Study (W-B Xuan et al.); A Framework for Business-to-Business E-Commerce Evaluation Challenges and Critical Success Factors (C Lin & Y-A Huang); The Diffusion of Web 2.0 Platforms: The Problem of Oscillating Degrees of Utilization (T Kollmann et al.); Application of Wireless Technologies in Mobile Business (X-Z Gao); Theories and Factors Affecting Electronic Commerce Adoption in Small and Medium Enterprises (SMEs): A Review (S Al-Somali et al.); Factors of Commercial Website Success in Small and Medium Enterprises: An Indonesian Study (V Pujani et al.); E-Commerce Adoption in Small Enterprises: An Australian Study (J Hallal et al.); Outlook of E-Business: Future of E-Business, Success Factors and E-Business Opportunities (J Xu & M Quaddus); Achieving Sustainable E-Business Success: Development and Application of a Model of E-Business Adoption, Success and Sustainable Success (J Xu & M Quaddus). Readership: Academics and professionals in e-business, innovation technology, international trade, entrepreneurship and decision sciences.*

*There is substantial interest in research in developing countries, especially in the use, implementation and development of information technology and systems. Many researchers have been moving toward an understanding of indigenous social and*

*cultural structures and how they influence the use and development of information systems. E-Commerce and Cultural Values addresses these issues and brings together scholars to share their expertise on different aspects of the social side of e-Commerce and information systems and how they impact the cultural values of a society.*

*Factors Affecting the Adoption and Meaningful Use of Electronic Medical Records in General Practices*

The present study found that performance expectancy, effort expectancy and confirmation of expectation were the significant determinants of behavioral intention, and that behavioral intention was significantly associated with usage behavior. Moreover, the results indicated that performance expectancy mediated the effects of effort expectancy and social influence on behavioral intention. These findings have important implications for both theory and practice. In addition to applying the extant models of technology adoption to nurses in clinical contexts, this study extended the Theory of Expectation-Disconfirmation, which is commonly used in marketing research, and applied it to study nurses' EHR adoption. The present work also leads to new discoveries, including (i) the mediating role of performance expectancy, (ii) the impact of nurses' confirmed expectations of their intention to use EHR systems, and (iii) the insignificance of the effects of external factors on nurses' EHR adoption. Several managerial implications also emerge. The model presented here has considerable potential to help system developers and hospital managers understand and identify the factors affecting nursing users' EHR adoption, and facilitate the planning and prioritization of resources for the development and implementation of EHR systems. Further extension and validation of the present research findings are recommended, particularly on the mediating role of performance expectancy and the association between confirmed expectation and intention. A longitudinal approach to examining the changes in nurses' perceptions, and the effects of these changes on their adoption behavior is useful in gaining a deeper understanding of the factors affecting nurses' adoption of EHR systems. In conclusion, the study successfully identified the determinants of nurses' EHR adoption in clinical contexts, and provided recommendations for researchers, system developers and hospital managers that can be used to increase the EHR adoption of nursing users. A wider adoption of EHR systems by nursing users can contribute to better health data management and clinical decision support, thereby enhancing the quality and safety of healthcare services.

This edited collection investigates the potential impact of long-term planning and strategic awareness on the ability of SMEs to remain competitive. The authors demonstrate that whether SMEs are able to identify and act upon external forces and factors, or not, is the defining indicator of their likelihood to struggle, survive, or thrive.

In the next few years, it is expected that most businesses will have transitioned to the use of electronic commerce technologies, namely e-commerce. This acceleration in the acceptance of e-commerce not only changes the face of business and retail, but also has introduced new, adaptive business models. The experience of consumers in online shopping and the popularity of the digital marketplace have changed the way businesses must meet the needs of consumers. To stay relevant, businesses must develop new techniques and strategies to remain competitive in a changing commercial atmosphere. The way in which e-commerce is being implemented, the business models that have been developed, and the applications including the benefits and challenges to e-commerce must be discussed to understand modern business. The Research Anthology on E-Commerce Adoption, Models, and Applications for Modern Business discusses the best practices, latest strategies, and newest methods for implementing and using e-commerce in modern businesses. This includes not only a view of how business models have changed and what business models have emerged, but also provides a focus on how consumers have changed in terms of their needs, their online behavior, and their use of e-commerce services. Topics including e-business, e-services, mobile commerce, usability models, website development, brand management and marketing, and online shopping will be explored in detail. This book is ideally intended for business managers, e-commerce managers, marketers, advertisers, brand managers, executives, IT consultants, practitioners, researchers, academicians, and students interested in how e-commerce is impacting modern business models.

*Electronic Banking is relatively a recent technology that enables customers to perform many financial services with no need to visit bank branches. It is internet based technology that can be accessed through a PC (Internet banking) or a wireless network and mobile phone (Mobile banking). This technology is adopted by almost all the banks worldwide for many years now and still there is high potential for growth. Many past studies have examined the benefits of diffusion and adoption of this banking alternative channel to both customers and banks. However, the uptake of this technology in Egypt is still slow and still many Egyptian customers are relying on bank branches to perform financial transactions. This paper explores some organizational and customer factors that influence the diffusion and adoption of electronic banking in Egypt towards increasing the rate of usage by both Egyptian banks and customers. The study also proposes some guiding strategies for Egyptian banking sector based on the explored factors. These strategies*

are change management, Building bank-customer relationship (trust), creating awareness and removing the risk and security customer concerns of technology. The study also recommends that the Egyptian banks should consider the demographics variables, specially age, education and income level when setting strategies for electronic banking as an alternative channel to traditional banking. The importance of customer and employees past experience in using technology also was highlighted in this research.

The adoption of electronic commerce and its associated technologies can provide an organization with a range of benefits. Yet, studies have shown that many organizations in Brunei Darussalam, small and medium enterprises in particular, are still not adopting it as rapidly as anticipated. The study aims to fill a knowledge gap on the slow uptake of electronic commerce in Brunei Darussalam and to identify which factors are important for encouraging willingness to adopt electronic commerce. This study also aims to discover the relationships that exist between these factors and the electronic commerce adoption as well as to quantify their relative importance ... The results show that the regression equation is statistically significant in explaining the adoption of electronic commerce. The coefficient of determination indicates that the equation explains nearly fifty percent of the variation in the small and medium enterprises' adoption of electronic commerce. In terms of relative importance, competitive pressure emerged as the most important factor influencing electronic commerce adoption ... this is followed by IT knowledge, relative advantage, security and government support

The COVID-19 pandemic has increased the focus on health informatics and healthcare technology for policy makers and healthcare professionals worldwide. This book contains the 110 papers (from 160 submissions) accepted for the 18th annual International Conference on Informatics, Management, and Technology in Healthcare (ICIMTH 2020), held virtually in Athens, Greece, from 3 - 5 July 2020. The conference attracts scientists working in the field of Biomedical and Health Informatics from all continents, and this year it was held as a Virtual Conference, by means of teleconferencing, due to the COVID-19 pandemic and the consequent lockdown in many countries around the world. The call for papers for the conference started in December 2019, when signs of the new virus infection were not yet evident, so early submissions were on the usual topics as announced. But papers submitted after mid-March were mostly focused on the first results of the pandemic analysis with respect to informatics in different countries and with different perspectives of the spread of the virus and its influence on public health across the world. This book therefore includes papers on the topic of the COVID-19 pandemic in relation to informatics reporting from hospitals and institutions from around the world, including South Korea, Europe, and the USA. The book encompasses the field of biomedical and health informatics in a very broad framework, and the timely inclusion of papers on the current pandemic will make it of particular interest to all those involved in the provision of healthcare everywhere.

Realities, Challenges and Outlook

Strategic E-Commerce Systems and Tools for Competing in the Digital Marketplace

Factors Affecting the Adoption of Electronic Health Records by Nurses

Organizational & Customer Factors Influencing Adoption of Electronic Banking

E-commerce and Cultural Values

The purpose of the research is to find the factors which persuade the consumers' trust on e-commerce adoption in Sri Lanka. The creation of the Internet has reduced physical borders and made the world a smaller place where people can able to keep in touch with one another at any time from every nook and corner. This research arise the following research questions. How the security and privacy concerns in online transaction relate with e-commerce adoption? How do the trustworthiness and reliability of the web vendors relate to the consumer's adoption of e-commerce? and How the performance, physical, security, privacy and delivery risk affect consumers to adopt in e-commerce. Questionnaire was used as a research instrument and basically the questionnaire cover two parts; such as 1st part covers questions related to online purchase and adoption of electronic commerce. The 2nd part covers factors affecting ecommerce security, privacy, and trust as well as risk perceptions. The extensive literature survey helped to form the research variables and hypothesis. To measure the questions likert scale measurement was used. The likert scale measurement were ranging from 1 - very unimportant to 5 - very important. This research shows that, consumer's perceived privacy, security and trustworthiness of Web vendor in e-commerce transaction positively contributes to his/her trust in e-commerce adoption. On the other hand the influence of a consumer's perceived security in e-commerce transaction is mediated by consumer's perceived privacy and consumer's adoption in e-commerce transaction not negatively associated with e-commerce perceived risks.

With the modernization of services offered through the internet, many traditional face-to-face services have adopted new e-service phenomena. Especially prevalent among the younger generations, this change in service has promoted many industries to rethink how to best reach their consumers using modern technology. Structural Equation Modeling Approaches to E-Service Adoption is a pivotal reference source that aims to share the latest empirical research findings within technology acceptance, information systems, information technology, human-computer interaction, and management information systems. While highlighting topics such as e-commerce, internet banking, and technology acceptance, this publication explores the understanding of today's e-services in a dynamic and complex environment, as well as the methods within the field of information systems and information technologies. This book is ideally designed for academics, students, managers, and scholars interested in the up-and-coming research surrounding the field of information technology.

This third global survey of the WHO Global Observatory for eHealth (GOe) investigates how eHealth can support universal health coverage (UHC) in Member States. A total of 125 countries participated in the survey, a clear reflection of the growing interest in this area. The report considers eHealth foundations built through policy development, funding approaches and capacity building in eHealth through the training of students and professionals. It then observes specific eHealth applications such as mHealth, telehealth, electronic health records systems and eLearning and how these contribute to the goals of UHC. Of interest is the extent to which legal frameworks protect patient privacy in EHRs as health care systems move towards to delivering safer, more efficient,

and more accessible health care. Finally the rapidly emerging areas of social media for health care as well as big data for research and planning are reported.
