Courts with the right to constitutional review exert considerable power in a political system. However, especially for Kelsenian constitutional courts there are hardly any large-N studies. This is mainly due to a lack of data. For the German Federal Constitutional Court, this gap has been closed by building a novel database, the development of which is depicted in this book. Employing data from this database, the occurrence of separate opinions in general and their different types in particular are analyzed. The book introduces a new, universal theory that reconciles and expands existing explanations. In a second step, the theory is applied to the German Federal Constitutional Court. It can be proven that one factor that has been neglected so far plays a decisive role: The judges' behavior depends on the profession they pursue after their time in office. Moreover, the study shows that - contrary to the common literature - it is not mainly the topic that determines a case's conflict potential but rather the number of issues a decision has to address.

Introduction to Critical Care Nursing

All Hands

West's federal supplement. [First Series.]

The fourth edition of Critical Care Obstetrics has been extensively revised to reflect the advances that have been made in maternal-fetal medicine. This edition contains 14 brand new chapters written by the field's leading physicians. Critical Care Obstetrics 4/e, offers expanded coverage in areas vital to intensive care management, including Neonatal Resuscitation, The Organ Transplant Obstetrical Patient, and Ethical Considerations This practical guide and reference will be of invaluable assistance to obstetricians, and primary care physicians, in both the treatment and referral of high-risk patients.

This book is intended to be a link between guidelines and clinical practice, a complementary tool to help physicians to be well informed regarding the important field of heart failure. It will be a useful tool for professionals from all the fields of cardiology: non-invasive cardiology, interventional cardiology, electrophysiology and cardiovascular imaging. The topic of heart failure is continuously changing, with new important information being added constantly. The pathophysiology is better understood and there is a trend for a better characterization of special groups of population, such as oncologic patients with heart failure. The new imaging techniques have become valuable tools for the diagnosis of heart failure, while pharmacological and novel cell and gene treatments have evolved enormously. The challenge for the practitioners is making the right selection of treatment strategy that best fits a patient. This book presents detailed information on the indications, selection and mechanism of action of these treatments, whether they be mechanical circulatory devices or pharmacological treatments. The contemporary pharmacological and non-pharmacological management of heart failure has the main target of early prevention of disease progression and the avoidance of heart transplant. In the era of shortage of donors, prevention is the mainstay of the therapeutic strategy, and this is the main philosophy of our book.

Although economics is a relative newcomer to research into the determinants of good health, its significance should not be under-estimated. This book poses the important question of whether economic theory can be developed to explain and engage in activities that are obviously a danger to their long-term health. In looking first at the individual's own decisions that affect his or her health, and then at the impact of other agent's decisions for the individual's health, the author provides an exhaustive account of the important issues to be faced to ensure the best future for public health care. Contributors include such experts as Peter Zweifel, Donald S. Kenkel and Mark Pauly. Of great interest to advanced students of health economics, this book will also be extremely useful to students, academics and professionals involved in the sphere of public health.
