

Financial Accounting Theory Deegan Summary

This book examines the theory and practice of Corporate Social Responsibility (CSR) in countries across Asia, including China, Japan, Malaysia, Thailand and Bangladesh, providing much needed Asian perspectives on this important issue. Arguing that Western CSR has enjoyed limited effectiveness, it asks whether Asia can avoid the West's mistakes.

Corporate Social Responsibility” is a first attempt at bringing together in one book experts' accounts of how corporate entities in twenty independent nations around the world are dealing with the issue of CSR. The world today faces diverse social problems. These become apparent as one moves from one country to the next, interestingly, society now expects corporations to help in finding solutions to these problems. The problem of global warming affects us all; modern

corporations can no longer continue to assume that the problem will go away, if nothing is done by them. We can all make a little difference by our actions.

Historically, the study of corporate social responsibility (CSR) reporting has largely been within the context of Western economies.

However, in the wake of highly publicized incidents such as Bhopal and the struggle of the Ogoni people in Nigeria, many large corporations now claim to be taking

steps to improve their environmental and social performance within developing countries. Using the lens of stakeholder theory, this book examines whether the current practice of CSR reporting in developing countries is motivated by a desire to discharge accountability to all relevant stakeholders or whether it is being driven by the imperative of advancing corporate economic interests. While concepts like CSR reporting have become more fashionable, they vary

widely in different national contexts; this book therefore clarifies the types and roles of CSR reporting and the underlying corporate motivations. The author considers the current CSR reporting practices in a number of developing countries, with particular attention given to illuminating a case study of Bangladesh.

point of view. The innovative nature of research is expressed through the study of new phenomena in finance including sustainable financial systems, sustainable finance, ESG risk and individual and institutional motivations of financial managers in the sustainability concept. The book aims to draw attention to the significant gap in the existing research. The concept of Sustainable Development, if placed in an economic category, requires a lot of attention, but seeing the cognitive category from the perspective of the discipline of finance, the latter is unsatisfactory, with questions remaining unanswered. At the same time, the rank problem, its strategic dimension and the amount of financial resources allocated and disbursed for

In addition, it also examines the reporting quantity and quality of Chinese enterprises by applying the GRI (Global Reporting Initiative) as an evaluation tool. In response to policy documents so as to obtain the government's recognition and to strive for more resources, state-owned enterprises, private enterprises and foreign-invested companies have made substantial efforts in social reporting in terms of quantity and coverage. However, it appears that there is still room for enhancing the quality of disclosure. The book also highlights the central government's

Given the increased social and environmental problems in China, this book looks into the social and environmental (environmental) disclosure practices of socially responsible Chinese listed firms by constructing a stakeholder-driven, three-dimensional, disclosure index. The book contains a three-part study: the first part explores the current status of social and environment disclosure

practices. The second part empirically examines the relationship between corporate social and environmental disclosure and various influencing factors (i.e. stakeholders' power and corporate characteristics). The third part empirically examines the link between corporate social responsibility (CSR) reporting (i.e. publishing a CSR report and the quality of the CSR report) and socially responsible reputation. The book finds that the CSR report provided more stakeholder-relevant social and environmental disclosure than

the annual report. It also finds that corporate characteristics such as firm size, profitability and industry classification are all statistically significant factors influencing social and environmental disclosure of the Chinese firms studied.

Shareholders significantly influenced firms' social and environmental disclosure, and creditors significantly influenced firms' disclosure related to their environmental performance. The final part of the study reports that publishing a CSR report and CSR reporting quality had a positive influence on firms'

The authors discuss empirical and theoretical studies which focus on processes and practices which inform the field. responsibility and sustainable development are two different concepts, whose integration over the years has led to significant advances in the way enterprises see and perceive their operations. It is not only about policies or steps taken to meet legal requirements, but is also about social equality and environmental accountability, also bearing in mind the links with eco-efficiency, innovation, and the health and wellbeing of workers. According to ISO 26000, social responsibility is the responsibility of an organisation for the impacts of its decisions and activities on society and the environment, through transparent and ethical behaviour that: a) contributes to sustainable development, including

health and the welfare of society b) takes into account the expectations of stakeholders c) is in compliance with applicable law and consistent with international norms of behaviour d) is integrated throughout the organisation and practised in its relationships. But even though the relations between social responsibility and sustainability are strong, it is still necessary to encourage organisations to adhere to, or at least follow the principles of sustainable development in their operations, giving something back to the community. As such, there is a need for a better understanding of how social responsibility is related to sustainable development, and of the identification of processes, methods and tools that may help the integration

of these two important elements. There is also a real need to showcase successful examples of how to structure behaviour and institutional practice in line with the sustainability challenges we face today. One of the most dramatic events in the global economy over the past few decades has been the rise of China as a global economic power. From humble beginnings in the late 1970s, the policy shift in China from a planned to market economy has led to economic growth of tremendous speed. This book examines the changes taking place in China's economy today and the impacts of these changes in China and abroad. The central theme is that the rapid economic growth has come at a cost, as many problems have emerged as a result in China's economy and society, including a dramatic rich-

poor gap, labour issues, problems in the banking sector and severe inflation in the cost of housing, as well as challenges with respect to China's external trade. The Chinese government recognizes these problems and is taking steps to rebalance its economy and society. The book takes a political economy perspective in order to investigate the interplay between the political system in China and the way in which the economy is structured, and the manner in which economic changes take place.

Demonstrating that in order for China to achieve sustained economic growth and social improvement it must undertake serious policy changes, it also highlights that if countries are

going to deal with China in a stable and productive manner, a thorough understanding of key contemporary developments in that country is vital. Covering a range of the most pertinent issues facing China today, this book will be of interest to students and scholars of Chinese Economics, Economic Development and Political Economy.
