A guide to the 5490 books in these fields in the 'Australian Books in Print' database as at June 1992, and out-of-print titles notified since December 1989, with titles indexed under Seminar paper from the year 2002 in the subject Business economics - Controlling, grade: 1,0, University of Hannover (Lehrstuhl für Controlling), course: Seminar zur "Financial Accounting" entries in the bibliography, language: English, abstract: This paper studies the decision-usefulness of accounting information and the implications of financial reports, especially against efficient securities markets. The decision-usefulness of financial statements gained in importance in the literature of accounting research due to the decline in helpfulness for decision-making of financial statements like earnings, cash flows and stock returns.<sup>1</sup> This deterioration is accompanied by a deficit of future-oriented indicators, in particular intangible assets, which are not reflected in actual financial reporting requirements.<sup>2</sup> These outstanding problems lead to incompleteness of capital markets, which are tried to be solved by different mechanisms, e.g. penalties, mandatory disclosure, to attain to efficient securities markets, the social advantageous solution.<sup>3</sup> Section 2 describes the requirements of efficient securities markets, its various forms and inefficient working securities markets. Chapter 3 illustrates the usefulness of financial statements for different constituencies, especially for investors and management, and the legal requirements for mandatory disclosure. Division 4 expresses the information dilemma and presents diverse solutions for an approximation to social optimal allocations, i.e. allocations that diminish social inefficiencies. Chapter 5 gives a short summary of this paper. 1 See LEV / ZAROWIN (Boundaries of Financial Reporting 1999), pp. 354 – 362. 2 See GÜNTHER / BEYER (Value Based Accounting 1999), pp. 1627 – 1629. 3 See SCOTT (Financial Accounting Theory 1997), pp. 81 – 82.

***Latin America is set to play an important role in the global economy; yet international research communities lack a systematic understanding of Latin American accounting issues. We aim with this volume to offer external audiences a sample of research conducted in Latin America to further understanding of accounting issues in this region.***

***Accountancy encompasses much more than is normally considered, especially from a social responsibility point of view. This book brings fresh ideas and an innovative approach to accountancy theory and practice as well as critical views about professional thinking in accountancy. The reader will find advanced approaches regarding business objectives with social responsibility principles. A new role of accountancy is founded for a sustainable society. The responsibility of individuals is emphasized through behavioural analysis. The book has an interdisciplinary character and will be interesting for students, doctoral students, academics and practitioners as well. The real thread of the book is the risk and responses to the feelings of risk in organizations and also of individuals. On this basis a new role and a new structure of accountancy is offered.***

***An innovative new valuation framework with truly useful economic indicators The End of Accounting and the Path Forward for Investors and Managers shows how the ubiquitous financial reports have become useless in capital market decisions and lays out an actionable alternative. Based on a comprehensive, large-sample empirical analysis, this book reports financial documents' continuous deterioration in relevance to investors' decisions. An enlightening discussion details the reasons why accounting is losing relevance in today's market, backed by numerous examples with real-world impact. Beyond simply identifying the problem, this report offers a solution—the Value Creation Report—and demonstrates its utility in key industries. New indicators focus on strategy and execution to identify and evaluate a company's true value-creating resources for a more up-to-date approach to critical investment decision-making. While entire industries have come to rely on financial reports for vital information, these documents are flawed and insufficient when it comes to the way investors and lenders work in the current economic climate. This book demonstrates an alternative, giving you a new framework for more informed decision making. Discover a new, comprehensive system of economic indicators Focus on strategic, value-creating resources in company valuation Learn how traditional financial***

It is primarily designed for undergraduate and postgraduate courses in comparative and international aspects of financial reporting. The book explores the conceptual and contextual found.*

*This second edition of a book first published in 1983 features three new chapters on the conceptual framework of financial reporting currently being developed in Australia. Other chapters have been rewritten or updated. Includes subject and author indexes.*

*Financial accounting theory has numerous practical applications and policy implications, for instance, international accounting standard setters are increasingly relying on theoretical accounting concepts in the creation of new standards; and corporate regulators are increasingly turning to various conceptual frameworks of accounting to guide regulation and the interpretation of accounting practices. The global financial crisis has also led to a new found appreciation of the social, economic and political importance of accounting concepts generally and corporate financial reporting in particular. For instance, the fundamentals of capital market theory (i.e. market efficiency) and measurement theory (i.e. fair value) have received widespread public and regulatory attention. This comprehensive, authoritative volume provides a prestige reference work which offers students, academics, regulators and practitioners a valuable resource containing the current scholarship and practice in the established field of financial accounting theory.*

Drawing upon frameworks employed in the human sciences, Breton builds a multi-faceted theory of accounting, conceiving it as a fundamentally social activity that puts preparers of financial statements in contact with users in order to help them make economic decisions, and analyzing the behavior of preparers and users.

Accounting Theory 5th edition is the new edition of the market leading theory textbook. The 5th edition has been updated to enhance student understanding of the role of accounting theory and the application of accounting theory in the professional environment. Increasingly, students have failed to appreciate the relevance of studying accounting theory due to the esoteric nature of the discipline and its lack of any obvious correlation to a discrete accounting process. The new edition addresses this issue and makes the link to industry more clear through chapter vignettes and case studies. The new edition goes further to align the study of accounting theory to the professional environment domestically and internationally. To achieve this, the new edition includes a "International View" vignette in each chapter to profile the international response or thinking on relevant issues, "Theory in Action" boxes illustrate the chapter material by way of presenting professional examples to build understanding and end of chapter case studies have develop and apply student understanding of the material. The new edition continues to provide the latest research and the most comprehensive discussion of material whilst maintaining its critical perspective.

The dissertation consists of four essays on the quality of audited financial statements. The first analysis investigates the association between several regulations of the audit market and earnings characteristics. The second essay differentiates between different drivers of audit quality after an auditor change by comparing the effects of voluntary and mandatory auditor changes. The third study analyses the different strategies of Big4 and non-Big4 auditors in dealing with Level 3 fair values. The fourth part examines banks' valuation behavior concerning Level 3 fair values.

Accounting Theory

Financial accounting, reporting and regulation is a vast subject area of huge global importance, with interest rising significantly in the light of the ongoing global financial crisis. The authors begin with a broad overview of the subject of accounting, setting the stage for a discussion on the theoretical and practical issues and debates regarding financial reporting, which are expanded on in the second part of the book. This includes how to define the reporting entity, recognition and measurement of the elements of financial statements, fair values in financial reporting and the costs and benefits of disclosure. The third part assesses the interest, need and theories behind the accounting, reporting and regulation industry, while parts four and five look at the institutional, social and economic aspects; with issues such as accounting for environmental management and, accounting regulation and financial reporting in Islamic countries, both issues of ever increasing importance. This authoritative Companion presents a broad overview of the state of these disciplines today, and will provide a comprehensive reference source for students and academics involved in accounting, regulation and reporting.

Academics and practitioners argue that intangible values have become significant value drivers of today's economy. Major production inputs no longer comprise of property, plant and equipment, but rather of brands, knowledge and other technological innovation. Based on this notion, information on such phenomena is supposedly crucial for existing and potential capital providers in making decisions whether to allocate resources to a company. This thesis examines the information use and needs of financial analysts with respect to intangible values. The purpose is to shed light on the usefulness of such information from the perspective of one of the primary user groups of IFRSs.

Learning Financial Accounting can often feel like learning a foreign language to students, in particular when terminology and procedure is piled on before core concepts are truly mastered.

Introductory Financial Accounting for Business is an innovative approach that emphasizes critical thinking over the rote memorization of terms, such as " debits " and " credits " . The sequential learning model employed by the authors helps students see the bottom-line consequences of financial statements as it relates to the overall business, better preparing them for careers as accountants, entrepreneurs, and decision-makers. The authors focus initially on conceptual underpinnings -- the reasons why we approach procedures the way we do -- rather than confusing students by front-loading the material with over-complicated details. Author Chris Edmonds has also created a highly popular and widely used series of video lectures, which engage students by clearly and charismatically going over each learning objective in a conversational style. These videos help reinforce important lessons and are always available for review. By developing this stronger foundation, students understand Accounting ideas more broadly and are able to ultimately learn procedural applications more quickly and accurately. With a straightforward writing style and highly engaging video lectures, this dynamic author team leads students down a streamlined learning path focused on critical thinking, clarity of concept, and applicability of material to the real world.

This book provides a critical analysis of the evolution of corporate disclosure. Building upon prior academic literature, it assesses the most important changes in mandatory corporate disclosure, the growing relevance of social and environmental disclosure, and revolutionary new forms of corporate communication, in particular social media. It also includes empirical analyses that shed further light on the impact of voluntary communication, i.e. social and environmental reporting and corporate social media communication, on managerial and investment decisions. Lastly, it discusses new directions for accounting and corporate governance research on the theoretical and empirical challenges of corporate disclosure. Offering a wealth of relevant and timely advice, the book will help regulators design policies that allow businesses to overcome current and emerging economic, social, and technological challenges.

How do laws resemble rules of games, moral rules, personal rules, rules found in religious teachings, school rules, and so on? Are laws rules at all? Are they all made by human beings? And if so how should we go about interpreting them? How are they organized into systems, and what does it mean for these systems to have 'constitutions'? Should everyone want to live under a system of law? Is there a special kind of 'legal justice'? Does it consist simply in applying the law of the system? And how does it relate to the ideal of 'the rule of law'? These and other classic questions in the philosophy of law form the subject-matter of Law as a Leap of Faith. In this book John Gardner collects, revisits, and supplements fifteen years of celebrated writings on general questions about law and legal systems - writings in which he attempts, without loss of philosophical finesse or insight, to cut through some of the technicalities with which the subject has become encrusted in the late twentieth century. Taking his agenda broadly from H.L.A. Hart's The Concept of Law (1961), Gardner shows how the key ideas in that work live on, and how they have been and can still be improved in modest ways to meet important criticisms - in some cases by concession, in some cases by circumvention, and in some cases by restatement. In the process Gardner engages with key ideas of other modern giants of the subject including Kelsen, Holmes, Raz, and Dworkin. Most importantly he presents the main elements of his own unique and refreshingly direct way of thinking about law, brought together in one place for the first time.
