In this volume, we examine how the institutional environment affects entrepreneurial organizations, and vice-versa. This includes not only how the institutional environment constrains both founding processes and the type of organizations founded, but also how institutional dynamics construct new entrepreneurial opportunities, empower and facilitate action, and how entrepreneurs manipulate the institutional environment to serve their own ends. This institutional approach to entrepreneurship shifts attention away from the personal traits and backgrounds of individual entrepreneurs, and towards how institutions shape entrepreneurial opportunities and actions; how entrepreneurs navigate their cognitive, normative, and regulatory environments; and, how actors modify and build institutions to support new types of organizations.

Model Rules of Professional Conduct

Accountants' Handbook, Special Industries and Special Topics

Accounting, often described as "the language of business", requires a diverse set of written, listening and oral communication skills if those who practise it are to be effective. Given the pace of change relating to, for example, the evolution of international accounting standards and the demands for greater transparency, accountants must be clear, responsive, and audience-focussed communicators. Employers of accountants consistently comment on the need for their new graduate recruits and trainees to have strong written, oral, and interpersonal communication skills. In this light accounting educators face the challenge of designing and delivering programmes that reflect professional expectations on the part of employers and clients, and educating students on how to make informed communication choices in order to achieve desired results and to build good working relationships. The chapters in this book deal with such topics as accounting students' perceptions of oral communication skills; competence-based writing skills; and the development of listening skills. This book was originally published as Accounting Education: an international journal.

This book presents the views of accounting educators, accounting education policy-makers, and accounting practitioners from across the world on the challenging topic of liberalising the accounting curriculum within university education. Accounting is a relatively new subject within universities and has been absorbed into a high level of education without any real attempt to do so within the traditional ethos of a liberal arts education. In this book, the logic of teaching using the liberal arts is described and contrasted with the practical vocational training approach of teaching which has formed the foundation of accountancy courses for many years. A proposal to change this established practice, by integrating the liberal arts into the university accounting curriculum, is followed by a series of short chapters which address the relevance, validity and worthiness of the proposed approach. Comments and counter-arguments are then discussed before further chapters illustrate how the proposed change may be achieved in a variety of different contexts – ranging from that of the global financial crisis (which began in 2008) to the inclusion of ethics and sustainability within the accounting curriculum. This book will aid those teaching accounting in universities to improve the design of their accounting degree programmes by moving away from an excessive emphasis on technical skills towards a broader consideration of a liberal contextualisation of the accounting curriculum. This book was originally published as a special issue of Accounting Education: an international journal.

This book collects high-quality papers on issues related to the rebalancing strategy in China, new clean cities as "hubs", liability management, and involving the private sector, including through PPPs, with specific examples from Guangdong. Guangdong has been at the forefront of economic reforms in China since the advent of the Responsibility System in the late 1970s, and its successes and challenges reflect those of China as a whole. The need for rebalancing towards a more inclusive and sustainable path is also critical in Guangdong, just as it is in China.

Strengthening the fiscal underpinnings and the next stages of tax reforms are critical drivers to accomplishing the requisite structural changes.

"Comparative International Accounting is intended to be a comprehensive and coherent text on international financial reporting. It is primarily designed for undergraduate and postgraduate courses in comparative and international aspects of financial reporting. A proper understanding requires broad overviews (as in Part I), but these must be supported by detailed information on real countries and companies (as in Parts II to IV) and across-the-board comparisons of major topics (as in Parts V and VI). This book was first published in 1981. Until this present edition (the fourteenth), the book was jointly written by Christopher Nobes and Robert Parker. However, Bob Parker died shortly after the thirteen edition was published in 2016. This edition is dedicated to his memory; see obituaries in the 2016 volumes of Accounting and Business Research and Accounting History. Bob's last publication was a review of the development of the contents of this book (and therefore of the world of international accounting) over its thirteen editions from 1981 onwards. Readers can consult this in Volume 21 (Issue 4) of Accounting History"--

Thirty chapters, written by leading scholars from around the world, are grouped into seven themed sections which focus on different facets of their respective themes - including student, curriculum, pedagogic, and assessment considerations.
