This book provides a comprehensive overview of the application of ERP Financials to the make to stock and make to order manufacturing process models. It is designed to provide valuable solutions and configuration/integration options that readers can use and apply directly in their daily activities. For Finance users, the book covers the standard business drivers and KPIs as they apply to each model, and lends guidance for configuring Financial Accounting and Controlling to maximize functionality for manufacturing finance. Implementation managers and consultants will benefit from the coverage of integrating ERP Financials with other SAP applications such as PP and MM, as well as the configuration sections for Master Data, Cost Object Controlling, and the Information System, among others. Readers from both functions will be able to make use of the numerous screen shots, configuration steps, best practice examples, and tips for system customization. Acknowledging the differences between the two primary manufacturing process models, the book is divided into three sections after an introductory chapter covering information generic to manufacturing models supported in SAP. Part I of the book covers the Make to Stock model, and comprises the bulk of book. Part II covers the Make to Order model. Part III provides a chapter filled with ready-to-use checklists and guides for budgeting and closing activities, and a chapter on the application of SAP Financial Performance Management (FPM, formerly CPM) to the manufacturing finance scenario.

This volume provides an evaluation of initial efforts to convert post-Soviet Russian industry from that of a highly-centralized, military-oriented economy to that of a civilian economy with a stronger base in private enterprise. The authors address crucial issues of the embattled economic transformation at the level of particular enterprises and geographic regions as well as in the contexts of state policy, finance and planning. Their analyses offer readers an understanding of the various obstacles that impede post-Soviet economic restructuring and point to ways in which they may be overcome.

SAP is a powerful software that meets the requirement of business all over the world. This well-organised book comprising 34 chapters is useful for both beginners and professionals. Being a learning guide and a user manual, the book will be immensely valuable for all those who are training to be SAP consultant. If you are a material/production manager, a QM professional or a business executive, you will find that the book brings a lot of convenience in your work and minimises inventory losses. A New Approach to SAP Implementation Structured dialog :The dialog between the consultant and the users should be based on the structure of this book. The consultant would demonstrate a business transaction, e.g. goods receipt, in its simplest form. He would then explain the data items on the screens, their meaning and significance. He would enquire whether the data item is relevant for the client company. The data items that are relevant can be hidden in the implementation, and related configuration marked as not required. When the consultant would come to a section explaining IMG node, his questions to the user would be designed to collect the information required to configure that node. Prototyping :As the structured dialog continues, the consultant would go on doing configuration. By the end of the dialog, the consultant would have built a company-specific prototype. Training and testing :The prototype would be a rough-cut implementation of SAP for the company. It would be used for training the users. After training, the users would try out the system. They would perform routine transactions several times using real data of their company. They would try different scenarios and record their observations. Refinement :After prototyping trials, the consultant and the users would sit together to discuss what the users required to do, but could not do with the prototype. The consultant would use this input to refine the prototype and to build new functionality, if needed. Configuration manual :The documentation of SAP implementation includes a configuration manual. This configuration manual should be structured on the lines of this book as explained in Chapter 34. Such a configuration manual will be

easy to understand as it groups logically related elements together. User manual :This book will serve as a generic user manual. Company-specific user manual can also be structured on the lines of this book including only company-specific guidelines for the users. If goods and services are not available in sufficient quantity, this can stop production and have a corresponding negative impact on sales. However, high warehouse stocks also tie up capital and cause costs. This book on consumption-based material requirements planning (MRP) will help you to manage this conflict of interests. Despite materials required having different procurement lead times and specific storage properties, you can and must be able to respond to individual requirements. Using processes and examples from practice, you will learn how the consumption-based MRP procedure in SAP MM can support you in these tasks. This book is aimed at both beginners in the topic, as well as key users who want to familiarize themselves with basic customizing settings. - Reorder point planning, stochastic and time-phased MRP - Material master data, including lot sizes and how to calculate them - Planning, planning process, stock/requirements lists (transaction MD04), and forecasts - Customizing of the basic settings and processes

The goal of this text is to describe the technical design aspects of the IT infrastructure; it does not give the details of installing and customizing SAP software, nor business process reengineering. Using primarily HP products for the solution examples, the chapters guide the reader through the foundation of the systems from an IT perspective, reviews its business application and architecture and introduces the server systems, then describes data storage, high availability and recovery solutions, client PCs with front-end user interfaces, output management and printing solutions, network infrastructure and requirements, cabling designs, LANs and WANs, and connecting mySAP.com to the Internet. Both authors are members of the HP-SAP International Competence Center.
