"... a curriculum geared

Jurcom
**toward helping students
gain skills in consciously
regulating their actions,
which in turn leads to
increased control and
problem solving abilities.
Using a cognitive behavior**

approach, the curriculum's learning activities are designed to help students recognize when they are in different states called "zones," with each of four zones represented by a

different color. In the activities, students also learn how to use strategies or tools to stay in a zone or move from one to another. Students explore calming techniques, cognitive

strategies, and sensory supports so they will have a toolbox of methods to use to move between zones. To deepen students' understanding of how to self-regulate, the lessons set out

to teach students these skills: how to read others' facial expressions and recognize a broader range of emotions, perspective about how others see and react to their behavior, insight into

events that trigger their less regulated states, and when and how to use tools and problem solving skills. The curriculum's learning activities are presented in 18 lessons. To reinforce the

concepts being taught, each lesson includes probing questions to discuss and instructions for one or more learning activities. Many lessons offer extension activities and ways to adapt

the activity for individual student needs. The curriculum also includes worksheets, other handouts, and visuals to display and share. These can be photocopied from this book

Concepts of Biology is
designed for the single-
semester introduction to
biology course for non-**

science majors, which for many students is their only college-level science course. As such, this course represents an important opportunity for students to develop the necessary

knowledge, tools, and skills to make informed decisions as they continue with their lives. Rather than being mired down with facts and vocabulary, the typical non-science major student needs

information presented in a way that is easy to read and understand. Even more importantly, the content should be meaningful. Students do much better when they understand why

**biology is relevant to their
everyday lives. For these
reasons, Concepts of Biology
is grounded on an
evolutionary basis and
includes exciting features
that highlight careers in the**

**biological sciences and
everyday applications of the
concepts at hand. We also
strive to show the
interconnectedness of topics
within this extremely broad
discipline. In order to meet**

**the needs of today's
instructors and students, we
maintain the overall
organization and coverage
found in most syllabi for this
course. A strength of
Concepts of Biology is that**
