Many physical problems are most naturally described by systems of differential and algebraic equations. This book describes some of the places where differential-algebraic equations (DAE's) occur. The basic mathematical theory for these equations is developed and numerical methods are presented and analyzed. Examples drawn from a variety of applications are used to motivate and illustrate the concepts and techniques. This classic edition, originally published in 1989, is the only general DAE book available. It not only develops guidelines for choosing different numerical methods, it is the first book to discuss DAE codes, including the popular DASSL code. An extensive discussion of backward differentiation formulas details why they have emerged as the most popular and best understood class of linear multistep methods for general DAE's. New to this edition is a chapter that brings the discussion of DAE software up to date. The objective of this monograph is to advance and consolidate the existing research results for the numerical solution of DAE's. The authors present results on the analysis of numerical methods, and also show how these results are relevant for the solution of problems from applications. They develop guidelines for problem formulation and effective use of the available mathematical software and provide extensive references for further study.

This edited volume assesses the quality of democracy in the Republic of Korea three decades after its formal democratization in 1987. It has been argued that Korea’s two subsequent power turnovers prove that its democracy has been successfully consolidated, despite its tremendous progress; however, recent developments show signs of deterioration and retreat. Therefore, drawing on the recent quality of democracy literature this volume sets out to answer the question: Where does Korea’s democratic quality stand today? The three chapters in first section of the book focus on aspects related to the presidency, political parties, and organized labor, also including the perspective of governance and human security as well as on the rule of law regarding the role and function of the prosecution. This is followed by a set of four chapters in section two that address the dimensions of democratic quality such as participation, freedom, equality, and responsiveness. The final, third section includes contributions on related inter-Korean policy issues. This book is an invaluable resource for political and social scientist working on democratic quality, and at the same for scholars in Asian or Korean Studies at faculty level as well as on graduate student level.

The Ptolemaic system of the universe, with the earth at the center, had held sway since antiquity as authoritative in philosophy, science, and church teaching. Following his observations of the heavenly bodies, Nicolaus Copernicus (1473-1543) abandoned the geocentric system for a heliocentric model, with the sun at the center. His remarkable work, On the Revolutions of Heavenly Spheres, stands as one of the greatest intellectual revolutions of all time, and profoundly influenced, among others, Galileo and Sir Isaac Newton.

This revised edition examines North and South Korea's political, socio-economic, and cultural history from the Neolithic period to the early 21st century, including issues of recent political unrest and preparations for the 2018 Winter Olympics. •Includes an expanded bibliography with additional print and electronic sources •Provides updated accounts of both North and South Korea's more recent events that enable readers to grasp the global significance and power of both nations

“This is a must-read book for anyone searching for insight into the peace process of the divided Korean peninsula. As a peace researcher and activist, the author highlights the role of civil society in making peacebuilding possible and sustainable on the Korean peninsula. This volume opens a new horizon to the study of peace and conflict.” –Koo, Kab Woo, Professor, University of North Korean Studies “This book makes an enormous contribution to our understanding of the dynamics of peace and conflict on the Korean peninsula and expands our understanding of the requirements of sustainable peacebuilding. The emphasis on the role of civil society as part of an inclusive approach to strategic peacebuilding is especially helpful.”–Iain Atack, Assistant Professor in International Peace Studies, Trinity College Dublin “This expertly crafted book makes an original contribution to understanding peacebuilding theory and the critical role of civil society in strategic peacebuilding. It offers valuable lessons and hope for peaceful transformation of the Korean conflict as well as the negotiation of a sustainable peace in other protracted conflict settings.”–Wendy Lambourne, Senior Lecturer, Department of Peace and Conflict Studies, University of Sydney The Post-Cold War era witnessed a dramatic rise in breakthroughs for peace processes, including the Korean peninsula, between parties mired in protracted conflict. However, many such processes broke down within a short period of time. This book explores the possibilities for comprehensive and sustainable peacebuilding strategy in the Korean peace process, beyond reaching an agreement, by reviewing diverse peacebuilding activities from government and civil society. TRAC: Trends in Analytical Chemistry, Volume 7 provides information pertinent to the trends in the field of analytical chemistry. This book discusses a variety of topics related to analytical chemistry, including biomolecular mass spectroscopy, affinity chromatography, electrochemical detection, nucleosides, and protein sequencing. Organized into 63 parts encompassing 158 chapters, this volume begins with an overview of the significance of quality and productivity in the analytical laboratory. This text then presents a comprehensive review on alcohol dehydrogenases, immobilization, and applications in analysis and synthesis. Other chapters consider the various tests for determining the excellence of quantitative assays available for analysts to utilize for method validation. This book discusses as well the primary challenge of neuropharmacologists to relate physiological functions to the many ligand binding sites identified in brain tissue.

The final chapter deals with the fundamentals and applications of biosensors. This book is a valuable resource for analytical chemists, chemical engineers, clinical chemists, neuropharmacologists, and scientists.

While writing the book,we have continuously kept in mind the examination requirments of the students preparing for U.P.S.C.(Engg. Services)and A.M.I.E.(l)examinations.In order to make this volume more useful for them,complete solutions of their examination papers up to 1975 have also been included.Every care has been taken to make this treatise as self-explanatory as possible.The subject matter has been amply illustrated by incorporating a good number of solved,unsolved and well graded examples of almost every variety.

Originally compiled and written by North Korean defector and author Lim Il, this English-language edition, thoroughly annotated by Dr. Adam Zulawnik, is a fascinating collection of 34 interviews with highly prominent North Korean defectors residing in South Korea, ranging from religious figures, to artists, politicians, North Korea experts, and even divers and subway train operators. The 33 interviews herein are listed chronologically according to the interviewees' date of arrival to South Korea and span almost 70 years. The book also includes six special columns addressing key issues pertaining to North Korean defectors and their lives in South Korea, such as the relationship between North Korean defectors and their South Korean counterparts (South Korean defectors to North Korea; nomenclature (how North Korean defectors have been referred to in South Korean society over time); arrival and settlement provisions from the South Korean government; the nuanced difference between defectors, defector-residents, and the displaced; North Korean defector-residents and their position in South Korean politics; and a short biography of five notable North Korean defector-residents who were not interviewed. The English translation also contains an exclusive 34th interview with Lim Il, the source text author which was carried out towards the end of the project in October 2020. The book is a valuable testament to North Korean defector-residents and unique in that it provides a candid account of each individual's experience. It will prove to be especially useful to students and scholars seeking to understand the complex dynamics of North Korean society and the status of exiles in South Korea, and a vital resource for students of Korean Studies.

It is known that dryland farming is not remunerative due to several constraints. Location specific technologies have been evolved for yield stabilization in dryland farming and conservation of fragile ecosystem by sustainable use of soil and water resources. Drought and flood situations are experienced some where in the country inspite of pletifull resources of waters unshine hours but poverty among farmers still exists. This is a point of sereous concern. Agrotechniques are alone the answer for low productivity (0.8 t/ha) of 90% rainfed farming. To feed over one billion gallowping population of country, there is a need to increase the productivity to 1.5 t/ha by 2010 AD. This book deals with seed, soil, watersheds, crop, weed and nutrient management use of weather forecast, measure to save crops under abiotic stresses like drought and flooding, selection of crops and variety, reclamation of degraded land, organic recycling, agro-meteorological approaches, water requirement, early harvest on physiological maturity, agro-hydro modelling and suitable medicinal and aromatic crops to make dry farming remunerative for welfare of common farmers. This is the first comprehensive book where large number of agro-techniques are incorporated. Chapters are written by eminent scientists of national repute who have devoted their life time to solve probable problems of dryland. Agro-techniques can well be adopted with ease by farmers through extension agencies to avoid bankrupsy. Book includes all relevant aspects of rainfed farming and is therefore a valuable addition in Dryfarming and meets the expectations of all those interested in rainfed farming in the country and abroad. Long outstanding demand has thus fulfilled with this book. The novel approach of editor has made the readers task quick and minimized their efforts by compiling all agro-techniques together at one place for benefit of farmers.
