The Ryan White Comprehensive AIDS Resources Emergency (CARE) Act gives funding to cities, states, and other public and private entities to provide care and support services to individuals with HIV and AIDS who have low-incomes and little or no insurance. The CARE Act is a discretionary program that relies on annual appropriations from Congress to provide care for low-income, uninsured, or underinsured individuals who have no other resources to pay for care. Despite its successes, funding has been insufficient to address all of the inequalities and gaps in coverage for people with HIV. In response to a congressional mandate, an Institute of Medicine committee was formed to reevaluate whether CARE allocation strategies are an equitable and efficient way of distributing resources to jurisdictions with the greatest needs and to assess whether quality of care can be refined and expanded. Measuring What Matters: Allocation, Planning, and Quality Assessment for the Ryan White CARE Act proposes several types of analyses that could be used to guide the evaluation and improvement of allocation formulas, as well as a framework for assessing quality of care provided to HIV-infected persons.

The nature of ethics has been the subject of much controversy and argument in recent decades. **Theological Ethics and Global Dynamics** tackles these various debates, offering a wide-ranging, comprehensive, and provocative statement of the nature of theological ethics in global times. Offers an accessible, lively, and provocative statement of the nature of moral philosophy and theological ethics in contemporary times. Tackles various perspectives on debates about distinctly Christian ethics. Argues that we need to reframe the arena in which moral questions are asked. Engages a range of positions, exploring distinctively modern issues such as moral and cultural relativism, globalization, problems of consumption and violence, and religious pluralism. Addresses the complexity of certain ethical decisions, which are difficult and far from clear-cut, and yet presents an ethical understanding which is both humane and deeply religious.

Get your highest score possible on the MPJE® with detailed state-specific guidance! Complete coverage of 20 states, plus federal regulations! Pharmacy Law is the perfect way to prepare for the MPJE Exam. It delivers a rigorous review of pharmacy-related statutes, rules, and regulations that impact pharmacy practice in twenty states as well as a summary of federal regulations that pertain to pharmacy law. Federal coverage includes summaries of must-know legislation such as the Federal Controlled Substances Act, the Federal Food, Drug & Cosmetics Act, and other relevant federal guidelines. State-specific chapters discuss important topics such as renewal of pharmacists' licenses, qualifications, prescription transfers, inventory requirements, record-keeping, and prescriptive authority. Each chapter concludes with practice scenarios and questions with appropriate explanations. The Review You Need to Excel in These States: Alabama, Arizona, Arkansas, California, Colorado, Florida, Georgia, Illinois, Indiana, Kentucky, Louisiana, Maryland, North Carolina, New Jersey, Ohio, Oregon, Pennsylvania, South Carolina, Texas & Wisconsin. Watch for future supplements with additional states.

This classic manual for structural steelwork design was first published in 1956. Since then, it has sold many thousands of copies worldwide. The fifth edition is the first major revision for 20 years and is the first edition to be

fully based on limit state design, now used as the primary design method, and on the UK code of practice, BS 5950. It provides, in a single volume, all you need to know about structural steel design.

Hepatitis B and C cause most cases of hepatitis in the United States and the world. The two diseases account for about a million deaths a year and 78 percent of world's hepatocellular carcinoma and more than half of all fatal cirrhosis. In 2013 viral hepatitis, of which hepatitis B virus (HBV) and hepatitis C virus (HCV) are the most common types, surpassed HIV and AIDS to become the seventh leading cause of death worldwide. The world now has the tools to prevent hepatitis B and cure hepatitis C. Perfect vaccination could eradicate HBV, but it would take two generations at least. In the meantime, there is no cure for the millions of people already infected. Conversely, there is no vaccine for HCV, but new direct-acting antivirals can cure 95 percent of chronic infections, though these drugs are unlikely to reach all chronically-infected people anytime soon. This report, the second of two, builds off the conclusions of the first report and outlines a strategy for hepatitis reduction over time and specific actions to achieve them.

All across the United States, individuals, families, communities, and health care systems are struggling to cope with substance use, misuse, and substance use disorders. Substance misuse and substance use disorders have devastating effects, disrupt the future plans of too many young people, and all too often, end lives prematurely and tragically. Substance misuse is a major public health challenge and a priority for our nation to address. The effects of substance use are cumulative and costly for our society, placing burdens on workplaces, the health care system, families, states, and communities. The Report discusses opportunities to bring substance use disorder treatment and mainstream health care systems into alignment so that they can address a person's overall health, rather than a substance misuse or a physical health condition alone or in isolation. It also provides suggestions and recommendations for action that everyone—individuals, families, community leaders, law enforcement, health care professionals, policymakers, and researchers—can take to prevent substance misuse and reduce its consequences.

The phase two report will outline a strategy for meeting the elimination goals discussed in this report.

Urgent steps are needed to arrest the rising human toll and economic strain from the COVID-19 pandemic that are exacerbating already-diverging recoveries. Pandemic policy is also economic policy as there is no durable end to the economic crisis without an end to the health crisis. Building on existing initiatives, this paper proposes pragmatic actions at the national and

multilateral level to expeditiously defeat the pandemic. The proposal targets: (1) vaccinating at least 40 percent of the population in all countries by the end of 2021 and at least 60 percent by the first half of 2022, (2) tracking and insuring against downside risks, and (3) ensuring widespread testing and tracing, maintaining adequate stocks of therapeutics, and enforcing public health measures in places where vaccine coverage is low. The benefits of such measures at about \$9 trillion far outweigh the costs which are estimated to be around \$50 billion—of which \$35 billion should be paid by grants from donors and the residual by national governments potentially with the support of concessional financing from bilateral and multilateral agencies. The grant funding gap identified by the Access to COVID-19 Tools (ACT) Accelerator amounts to about \$22 billion, which the G20 recognizes as important to address. This leaves an estimated \$13 billion in additional grant contributions needed to finance our proposal. Importantly, the strategy requires global cooperation to secure upfront financing, upfront vaccine donations, and at-risk investment to insure against downside risks for the world.

"Many of the elements of the Affordable Care Act (ACA) went into effect in 2014, and with the establishment of many new rules and regulations, there will continue to be significant changes to the United States health care system. It is not clear what impact these changes will have on medical and public health preparedness programs around the country. Although there has been tremendous progress since 2005 and Hurricane Katrina, there is still a long way to go to ensure the health security of the Country. There is a commonly held notion that preparedness is separate and distinct from everyday operations, and that it only affects emergency departments. But time and time again, catastrophic events challenge the entire health care system, from acute care and emergency medical services down to the public health and community clinic level, and the lack of preparedness of one part of the system places preventable stress on other components. The implementation of the ACA provides the opportunity to consider how to incorporate preparedness into all aspects of the health care system. The Impacts of the Affordable Care Act on Preparedness Resources and Programs is the summary of a workshop convened by the Institute of Medicine's Forum on Medical and Public Health Preparedness for Catastrophic Events in November 2013 to discuss how changes to the health system as a result of the ACA might impact medical and public health preparedness programs across the nation. This report discusses challenges and benefits of the Affordable Care Act to disaster preparedness and response efforts

around the country and considers how changes to payment and reimbursement models will present opportunities and challenges to strengthen disaster preparedness and response capacities."--Publisher's description.

Addiction Recovery Management

With sixteen hospitals and almost 10,500 beds, the New York City Health and Hospitals Corporation (HHC) is the largest municipal hospital system in the United States. With forty-seven hospitals and almost thirty-three thousand beds, the Paris Hospital Corporation, Assistance Publique-Hopitaux de Paris (AP), is three times as large, the biggest municipal hospital system in France. This book compares these two vast systems. It analyzes staffing, outpatient and inpatient care, the desirability of private faculty practice plans, budgeting, quality assurance, and the role of medical education in these two very different systems. In addition, it reviews how both HHC and AP plan to adapt their systems over the next decade and beyond. Aging populations, the development and diffusion of new medical technologies, and the growth of hospitals and physicians throughout the 1960s and 1970s have led to massive increases in health care costs in both the United States and in France. Both New York City and Paris have suffered the shock of the AIDS epidemic. Detailed, informed, and authoritative, this book will stand for years as the standard comparative study of two large municipal hospital systems.

The overall goal of this book is to give the reader a state-of-the-art synopsis of the pharmacist services domain. To accomplish this goal, the authors have addressed the social, psychosocial, political, legal, historic, clinical, and economic factors that are associated with pharmacist

services. In this book, you will gain cutting-edge insights from learning about the research of experts throughout the world. The findings have relevance for enhancing pharmacist professionalism, pharmacist practice, and the progression of pharmacist services in the future.

Since the end of World War II, European airlines have revealed their own operational style. By analyzing seven European flag-carriers, Diemel and Lyth provide a comparative study of the airline business, covering government policy, aircraft procurement, network growth, commercial performance and collaboration with other airlines and transport modes. This study also seeks to explain why national flag-carriers have survived in an age of globalization and strategic alliances. A concluding chapter views the contrasting American air transport industry.

This paper reviews economic developments in Suriname during 1994–96. In 1995, there was a major turnaround in Suriname's economic and financial situation following the expansionary fiscal and monetary policies pursued in the first half of the 1990s and the political and economic disruptions of the 1980s. The marked improvement was owing to the restoration of financial discipline, a strengthening of international bauxite prices, and the unification and subsequent stabilization of the exchange rate. The inflation fell further to less than 1 percent in 1996.

Revision of the author's doctoral thesis, submitted to the Oriental Institute of Oxford University in 1997.

"One icy winter's evening in Budapest, a man runs straight into John Taylor as he walks home through the narrow streets. John falls over into the snow and looks up at the man's face. 'I felt very afraid. Because what I saw was me. My face looking down at me. My mouth saying sorry.' Who is the man, and how will John's life change?

This book serves as a practical resource for pain medicine providers. It presents important clinical concepts while covering critical pain medicine fundamentals. Chapters were carefully chosen to cover common aspects of clinical pain medicine and also follow a common format to facilitate quick look-up. Each chapter includes a concise discussion of the latest supporting evidence as well as relevant case scenarios. The coverage is clinically and board relevant, evidence-based and up-to-date. It will appeal to residents preparing for the written board

examination and practitioners preparing for board re-certification, which now occurs every 10 years. Beyond these groups, the book has the potential to appeal to learners and practitioners around the world; pain medicine is burgeoning globally, and there is great need for concise, clinically relevant resources.
