Mine-protected and mine-resistant, ambush-protected (MRAP) vehicles are today standard in the US, most major western armed forces and many other armies as a result of the wars in Iraq and Afghanistan. The South African Army was already routinely using mine-protected armored personnel carriers and patrol vehicles forty years ago even if they looked primitive and ungainly. A few years later, the South African Army had reached the stage where it could deploy entire combat groups into battle zones equipped with only mine-protected vehicles, including their ambulances and supply trucks. By then the mine-protected vehicles had also become effective for use in combat, rather than just protected transport, the Casspir being the chief example. More to the point, they saved countless soldiers and policemen from death or serious injury, and the basic concepts now live on in the various MRAP types in service today. The valuable lessons learned by the South Africans with their early designs of these combat-proven vehicles has led the country to become one of the global leaders in the design of MRAPs which are locally manufactured and exported around the world. *Surviving the Ride* is a fascinating pictorial account featuring more than 120 of these unique South African-developed vehicles, spanning a forty-year period, with over 280 photographs, many of which are previously unpublished. If you have one of the 351C, 351M, 400, 429 or 460 Ford V8s, this comprehensive book is a must. It walks you through a complete engine rebuild, step-by-step, with minimum use of special tools. Save money by finding out if your engine really needs rebuilding, or just simple and inexpensive maintenance. Results from diagnosis outlines in this book should be your guide, not the odometer. All rebuilding steps are illustrated from beginning to end. How to inspect parts of damage and wear, and to recondition each part yourself to get the job done right! The most complete source of information identifying major engine parts. Casting numbers, parts description, when a part was used and how it can be interchanged is fully covered in the text, in 20 tables and in 560 photos or drawings. This book will make you an expert!

Hydrogen has been recognised as a universal, clean fuel which is expected to provide energy to our homes, industry and automobiles in the future. It is considered as one of the most interesting alternatives to petroleum fuels. A considerable amount of research and development work on production, storage and transportation, and utilisation of hydrogen is in progress all over the world. In India, several institutions have been working on the various aspects of the hydrogen considering it as an energy vector. A three-day National Workshop on Hydrogen Energy was organised at Indian Institute of Technology (IIT) Delhi to focus attention on developments in hydrogen energy at national and international levels and to provide a forum to coordinate contemporary research trends in the country in this field. The presentations made at the Workshop covered the topics which are considered to be of significance to work out the perspective, problems and promises for the future for transition to hydrogen energy. The proceedings of the Workshop are reported in this book, which include the inaugural address, description of the national research and development programme in the field of hydrogen energy, papers presented on production, storage and transportation, and utilisation of hydrogen

and the panel report. In the inaugural address, emphasis is laid on the need for a transition from the presently used fuels to the newer ones, preferably to those which are renewable and non-polluting such as hydrogen.

Without question, the 1964-1/2 Mustang is one of the most important and influential cars in automotive history. When Ford launched the Mustang, it created an automotive revolution. Award-winning designer and stylist Gale Halderman was at the epicenter of the action at Ford, and, in fact, his initial design sketch formed the basis of the new Mustang. He reveals his involvement in the project as well as telling the entire story of the design and development of the Mustang. Authors and Mustang enthusiasts

James Dinsmore and James Halderman go beyond the front doors at Ford into the design center, testing grounds, and Ford facilities to get the real, unvarnished story. Gale Halderman offers a unique behind-the-scenes perspective and firsthand account of the inception, design, development, and production of the original Mustang. With stinging losses from the Edsel fresh in minds at Ford, the Mustang project was an uphill battle from day one. Lee Iacocca and his assembled team had a herculean task to convince Henry Ford II to take a risk on a new concept of automobile, but with the help of Hal Sperlich's detailed market research, the project received the green light. Henry Ford II made it clear that jobs were on the line, including Iacocca's, if it failed. The process of taking a car from sketch to clay model to prototype to preproduction and finally finished model is retraced in insightful detail. During the process, many fascinating experimental cars, such as the Mustang I two-seater, Mustang II prototype, Mustang Allegro, and Shorty, were built. But eventually the Mustang, based on the

existing Ford Falcon, received the nod for final production. In a gala event, it was unveiled at the 1964 World's Fair in New York. The Mustang received public accolades and critical acclaim, and soon it became a runaway hit. After the initial success, Ford designers and Gale Halderman designed and developed the first fastback Mustangs to compliment the coupes. The classic Mustang muscle cars to follow, including the GT, Mach 1, and others, are profiled as well. The Mustang changed automotive history and ushered in the pony car era as a nimble, powerful, and elegantly styled sports coupe. But it could so easily have stumbled and wound up on the scrap pile of failed new projects. This is the remarkable and dramatic story of how the Mustang came to life, the demanding design and development process, and, ultimately, the triumph of the iconic American car. Less than two days. That's all the notice America gets of a fast-approaching solar storm so unprecedented in scale it sets the geomagnetic scientists in a panic. Many citizens don't have the resources, or even the concern, to take

preparatory measures for the overhyped-sounding warnings that life as they know it is about to be over. Joel McConnell, a self-made Washington DC businessman and survival hobbyist, is not one of those. But bugging out with his culture-loving girlfriend before the solar flare hits proves to be a too much of a challenge on such short notice. With the power grid suddenly destroyed, most modern electronics fried, and cities quickly descending into utter turmoil, they find the 500-mile journey to Joel's well-stocked rural retreat a maze littered with opportunistic criminals and increasing hostility. That isn't all. It soon becomes evident the sun storm did more than plunge the western world into darkness and civil unrest. It left something equally sinister behind. Something that feeds the human compulsion for disunity to such extremes it makes the recent political divisiveness in America look like harmonic brotherhood by comparison. With the effects worsening daily, Joel learns the highway is but one treacherous adversary he must defeat. Others can sprout where you least expect them.

Accidental Sailor Girl is a story about a young girl named Kourtney and her journey from starting out with only her car and a surfboard to sailing across the Atlantic on a Gaff Rigged Cutter with a Square Sail named Norna. The story moves from her hardships of living on the beach to buying her first sailboat, a 27 foot Hunter she named "Happy." Her attitude toward learning how to sail and how to fix up her boat led her to meet Pete Grundvig, a local carpenter and

shipwright, the owner of Norna. Their relationship with surfing, sailing, and music, moved them to the tune of a two year Atlantic Circumnavigation. Kourtney soon realizes she is not the same person she was when she left home two years before.

In the late 1970s, Richard convinced his wife, Sandra, that they should leave their promising professional careers and comfortable suburban lifestyle to start an azalea nursery in the foothills of the Blue Ridge Mountains. With no horticultural training or business experience, few mechanical skills, and absolutely no idea what they were getting themselves into, numerous adventures followed. In the second book in the planned four-book series, Richard continues the couple ' s colorful story, a story of triumph and despair, of high expectations and harsh reality, and of the people who touched their

lives along the way. In the tradition of such classics as *The Little House on the Prairie* and *Walton's Mountain*, *Mountain of My Dreams* shares the true story of two ordinary people and their memorable, often remarkable 25-year journey. Much more than just another "back-to-the-land" chronicle, this is a heartwarming tale of a man, a woman, and their belief in each other. If you've ever wondered why the less-traveled road is less traveled, you need to read their story.
