U.S. The book is divided into three parts. In Part A, two of the organizers set the scene, describing the reasons for arranging the symposium and outlining the preparations and the work done at the meeting. Part B contains 17 reports from the 15 countries and in Part C, there are two summaries, analysing the conclusions taken from two different vantage points. The controversies surrounding standards remain. However, this book gives a succinct and authoritative overall account of the advantages and disadvantages of their introduction taken from the experiences of many countries.

**Education is a hot topic. From the stage of presidential debates to tonight's dinner table, it is an issue that most Americans are deeply concerned about. While there are many strategies for improving the educational process, we need a way to find out what works and what doesn't work as well. Educational assessment seeks to determine just how well students are learning and is an integral part of our quest for improved education. The nation is pinning greater expectations on educational assessment**

than ever before. We look to these assessment tools when documenting whether students and institutions are truly meeting education goals. But we must stop and ask a crucial question: What kind of assessment is most effective? At a time when traditional testing is subject to increasing criticism, research suggests that new, exciting approaches to assessment may be on the horizon. Advances in the sciences of how people learn and how to measure such learning offer the hope of developing new kinds of assessments—assessments that help students
