*Invasive alien plants and animals are known for their disruption of ecosystems and threat to biodiversity. This book highlights their major impact on human health. This includes not only direct effects through contact with the species via bites, wounds and disease, but also indirect effects caused by changes induced in ecosystems by invasive species, such as more water hyacinth increasing mosquito levels and thereby the potential for malaria. Covering a wide range of case studies from different taxa (animals and plants), and giving an overview of the diverse impacts of invasive species on health in developed and developing countries, the book is a significant contribution that will help in prioritising approaches to controlling invasive species and mitigating their health effects. It covers invasive plants, marine species, spiders and other arachnids, ticks and dust mites, insects, mosquitos and other diptera, freshwater species (invertebrates and fishes), amphibians and reptiles, birds and mammals. The broad spectrum of the analyzed case studies will ensure the appeal of the book to a wide public, including researchers of biological invasions, doctors, policy-makers and managers, and students of invasive species in ecology, animal and plant biology and public health medicine.*

*Municipal and industrial wastewaters contain a wide spectrum of pollutants. Their effective removal presents a challenge for water treatment technology. Biosorption of nutrients and pollutants has been used in sewage treatment since the discovery of the activated sludge process. It is a passive uptake process by which pollutants are adsorbed on the surface of cell walls and/or dissolved in structures of microorganism cells that are present in sludge. Sorbed pollutants remain in the sludge and can be potentially released back into the environment depending on their condition and the reversibility of the pollutant–sludge interaction. An overview of typical biosorption applications for the removal of nutrients, organic pollutants, and metals in wastewater treatment is provided in different areas of their use for the protection of aquatic ecosystems and human health. This book will be of interest to operators of wastewater treatment plants and sludge treatment and disposal facilities as well as to researchers and university students in the field of environmental engineering.*

*Natural disasters traumatize individuals, disrupt families, and destabilize communities.Surviving these harrowing events calls for courage, tenacity, and resilience. Professional planning requires specific types of knowledge of how people meet and cope with extreme challenges. Disaster Resilience from a Sociological Perspective examines three major earthquakes occurring in Italy over a fourteen - year period for a well-documented analysis of populations' responses to and recovery from disaster, the social variables involved, and the participation of public agencies. This timely volume reviews sociological definitions and models of disaster, identifying core features of vulnerability and multiple levels of individual and social resilience. The analysis contrasts the structural and supportive roles of Italy's civil protection and civil defense services in emergency planning and management as examples of what the author terms professional resilience. And testimony from earthquake survivors and volunteers gives voice to the social processes characteristic of disaster. Among the areas covered: Social context for concepts of disaster, vulnerability, risk, and resilience Types of resilience: a multidimensional analysis, focused on a physical, ecological, and ecosystem perspective Findings from three earthquakes: loss, hope, and community. Two systems of organizational response to emergencies Toward a relational approach to disaster resilience planning Plus helpful tables, methodological notes, and appendices For researchers in disaster preparedness, psychology, and sociology, Disaster Resilience from a Sociological Perspective raises--and addresses--salient questions about people and communities in crisis, and how studying them can improve preparedness in an uncertain future.*

*Trouble on the Far Right Principles and Applications Biosorption Nuova antologia Fascist Spectacle Publisher Description Whereas the hydrolases such as proteases, esterases and lipases are sufficiently well researched to be applied in every standard laboratory, other types of enzymes are still waiting to be discovered with respect to their applicability in organic-chemistry transformations on a preparative scale. This latter point is stressed here, with the focus on the newcomer–enzymes'which show great synthetic potential. A collection of essays from the visionary storyteller Gianni Rodari about fairy tales and folk tales and their great advantages in teaching creative storytelling. "Rodari grasped children's need to play with life's rules by using the grammar of their own imaginations. They must be encouraged to question, challenge, destroy, mock, eliminate, generate, and reproduce their own language and meanings through stories that will enable them to narrate their own lives." --Jack Zipes "I hope this small book," writes renowned children's author Gianni Rodari, "can be useful for all those people who believe it is necessary for the imagination to have a place in education; for all those who trust in the creativity of children; and for all those who know the liberating value of the word." Full of ideas, glosses on fairytales, stories, and wide-ranging activities, including the fantastic binomial, this book changed how creative arts were taught in Italian schools. Translated into English by acclaimed children's historian Jack Zipes and illustrated for the first time ever by Matthew Forsythe, this edition of The Grammar of Fantasy is one to live with and return to for its humor, intelligence, and truly deep understanding of children. A groundbreaking pedagogical work that is also a handbook for writers of all ages and kinds, The Grammar of Fantasy gives each of us a playful, practical path to finding our own voice through the power of storytelling. Gianni Rodari (1920–1980) grew up in Northern Italy and wrote hundreds of stories, poems, and songs for children. In 1960, he collaborated with the Education Cooperation Movement to develop exercises to encourage children's creative and critical thinking abilities. Jack Zipes is a renowned children's historian and folklorist who has written, translated, and edited dozens of books on fairytales. He is a professor at the University of Minnesota. Matthew Forsythe lives in Montreal where he draws and paints for picture books, comics, and animations.*

The essays in this Handbook, written by an international team of distinguished scholars, combine to explore the way in which fascism is understood by contemporary scholarship, as well as pointing to areas of continuing dispute and discussion. From a focus on Italy as, chronologically at least, the 'first Fascist nation', the contributors cover a wide range of countries, from Nazi Germany and the comparison with Soviet Communism to fascism in Yugoslavia and its successor states. The book also examines the roots of fascism before 1914 and its survival, whether in practice or in memory, after 1945. The analysis looks at both fascist ideas and practice, and at the often uneasy relationship between the two. The book is not designed to provide any final answers to the fascist problem and no quick definition emerges from its pages. Readers will rather find there historical debate. On appropriate occasions, the authors disagree with each other and have not been forced into any artificial 'consensus', offering readers the chance to engage with the debates over a phenomenon that, more than any other single factor, led humankind into the catastrophe of the Second World War. Reminiscent of Scherzazade and One Thousand and One Nights, Gianni Rodari's Telephone Tales is many stories within a story. Every night, a traveling father must finish a bedtime story in the time that a single coin will buy. One night, it's a carousel that adults cannot comprehend, but whose operator must be some sort of magician, the next, it's a land filled with butter men who melt in the sunshine Awarded the Hans Christian Anderson Award in 1970, Gianni Rodari is widely considered to be Italy's most important children's author of the 20th century. Newly re-illustrated by Italian artist Valerio Vidali? (The Forest)? Telephone Tales? entertains, while questioning and imagining other worlds.*

*Aviation Safety ... Gazzetta di Firenze The Oxford Handbook of Fascism Nombres verdaderos, Parte I Pinocchio, the Tale of a Puppet The Grammar of Fantasy The European Union and the single currency have given Europe more stability than it has known in the past thousand years, yet Europe seems to be in perpetual crisis about its global role. The many European empires are now reduced to a multiplicity of ethnicities, traditions, and civilizations. Europe will never be One, but to survive as a union it will have to become a federation of [i]slands! both distinct and connected. Though drawing on philosophers of Europe's past, Caccari calls not to resist Europe's sunset but to embrace it. Europe will have to open up to the possibility that in few generations new exiles and an unpredictable cultural hybridism will again change all we know about the European legacy. Though scarcely alive in today's politics, the political unity of Europe is still a necessity, however impossible it seems to achieve. The Oxford Handbook of Fascism, Volume I: Mapping realism Volume Settimo: Corsini, Lippi, Folengo, Bracciolini, Lalli, Neri, Nomi, Dottori, Piverdi, Pananti, Peri, Bocchini ed il Bertoldo e L'Esopo di Vari L'Italia che scrive rassegna per coloro che leggono I diritti della scuola The story of Mika, a Jewish boy, who becomes a puppeteer in the Warsaw ghetto - a stunning debut for fans of The Tattooist of Auschwitz, The Boy with the Striped Pyjamas and Schindler's List I was twelve when the coat was made. Nathan, our tailor and dear friend, cut it for Grandfather in the first week of March 1938. It was the last week of freedom for Warsaw and for us... Even in the most difficult of lives, there is hope. And sometimes that hope comes in the form of a small boy, armed with a couple of puppets - a prince, a girl, and a crocodile with half-painted teeth... When Mika's grandfather dies in the Warsaw ghetto, he inherits not only his great coat, but its treasure trove of secrets. In one remote pocket, he finds a papier mache bear of secrets. Industrial Biotransformations - a user-friendly and application-oriented up-to-date overview of one-step biotransformations of industrial importance. The data conferring each process is arranged in a convenient format to survey so that the processes can easily be compared. Each set of data is accompanied by key literature citations. As far as flow sheets of the processes are available, these are given reduced to their significant elements. An extensive index classified by substrates, products, enzymes, and companies provides direct access to each process organized in the order of enzyme classes. The reader will find all significant parameters characterizing the biotransformation itself and the process. X-ray Absorption Spectroscopy (XAS) is a powerful technique with which to probe the properties of matter, equally applicable to the solid, liquid and gas phases. Semiconductors are arguably our most technologically-relevant group of materials given they form the basis of the electronic and photonic devices that now so widely permeate almost every aspect of our society. The most effective utilisation of these materials today and tomorrow necessitates a detailed knowledge of their structural and vibrational properties. Through a series of comprehensive reviews, this book demonstrates the versatility of XAS for semiconductor materials analysis and presents important research activities in this ever growing field. A short introduction of the technique, aimed primarily at XAS newcomers, is followed by twenty independent chapters dedicated to distinct groups of materials. Topics span dopants in crystalline semiconductors and disorder in amorphous semiconductors to alloys and nanometric material as well as in-situ measurements of the effects of temperature and pressure. Summarizing research in their respective fields, the authors highlight important experimental findings and demonstrate the capabilities and applications of the XAS technique. This book provides a comprehensive review and valuable reference guide for both XAS newcomers and experts involved in semiconductor materials research.*

*This book is about innovation, reflection and inclusion. Cultural innovation is something real that tops up social and technological innovation by providing the reflective society with spaces of exchange in which citizens engage in the process of sharing their experiences while appropriating common goods content. We are talking of public spaces such as universities, academies, libraries, museums, science-centres, but also of any place in which co-creation activities may occur. The argument starts with the need for new narratives in the history of philosophy, which can be established through co-creation, the motor of cultural innovation. The result is redefining the history of philosophy in terms of a dialogical civilization by ensuring continuous translations, individual processes of reflection and collective processes of inclusion. Readers will grasp the effectiveness of the history of philosophy in societies that are inclusive, innovative and reflective. Few literary phenomena are as elusive and yet as persistent as realism. While it responds to the perennial impulse to use literature to reflect on experience, it also designates a specific set of literary and artistic practices that emerged in response to Western modernity. Landscapes of Realism is a two-volume collaborative interdisciplinary exploration of this vast territory, bringing together leading-edge new criticism on the realist paradigms that were first articulated in nineteenth-century Europe but have since gone on globally to transform the literary landscape. Tracing the manifold ways in which these paradigms are developed, discussed and contested across time, space, cultures and media, this first volume tackles in its five core essays and twenty-five case studies such questions as why realism emerged when it did, why and how it developed such a transformative dynamic across languages, to what extent realist poetics remain central to art and popular culture after 1900, and how generally to reassess realism from a twenty-first-century comparative perspective.*

In Europe, the far right is gaining momentum on the streets and in parliaments. By taking a close look at contemporary practices and strategies of far-right actors, the present volume explores this right-ward shift of European publics and politics. It assembles analyses of changing mobilization patterns and their effects on the local, national and transnational level. International experts, among them Tamir Bar-On, Liz Fekete, Matthew Kolt, and Graham Macklin, scrutinize new forms of coalition building, mainstreaming and transnationalization tendencies as aspects of diversified far-right politics in Europe. This Encyclopedia is the first to compile pseudonyms from all over the world, from all ages and occupations in a single work: some 500,000 pseudonyms of roughly 270,000 people are deciphered here. Besides pseudonyms in the narrower sense, initials, nick names, order names, birth and married names etc. are included. The volumes 1 to 9 list persons by their real names in alphabetical order. To make the unequivocal identification of a person easier, year and place of birth and death are provided where available, as are profession, nationality, the pseudonym under which the person was known, and finally, the sources used. The names of professions given in the source material have been translated into English especially for this encyclopaedia. In the second part, covering the volumes 10 to 16, the pseudonyms are listed alphabetically and the real names provided. Consequently, the epistemological and methodological standard of ancient historiography is typically held as inferior against the modern ideal. This book serves to address this apparent deficit. Its scope is three-fold. Firstly, it aims at encountering ancient modes of historical and historiographical thought within the province of their own horizon. Secondly, this book considers the possibility of a dialogue between ancient and modern philosophies of history concerning the influence of ancient historical thought on the development of modern philosophy of history and the utility of modern philosophy of history in the interpretation of ancient historiography. Thirdly, this book explores the continuities and discontinuities in historical method and thought from antiquity to modernity. Ultimately, this volume demonstrates the necessity of re-evaluating our assumptions about the relation of ancient and modern historical thought and lays the groundwork for a more fruitful dialogue in the future.*

*Journalist Patrick Strickland provides on-the-ground profiles of the unique characters involved in anti-fascist struggles in various countries across Europe. The left and its anti-authoritarian variants were fighting far-right populism and neo-Nazis long before the mainstream media became aware of such groups. Stickland bases his profiles in their historical context, explaining the roots and gains of the far-right, as well as the history of anti-fascist efforts and how they inform today's struggles. Each profile, ranging from a 71-year-old grandmother armed with cans of spray paint to street-fighting youth, provides a window into the broader anti-fascist movement in each country, highlighting the creative tactics diverse individuals employ to fight hatred and white supremacy in their communities.*
