Succinct, yet comprehensive, Assistive Technology is designed to help educators better understand assistive technology and how it can support students with disabilities from early childhood through the transition into adulthood. This practical book is organized around the purpose of technology and the support it can provide rather than a student ' s disability categorization.

Grounded in research and filled with engaging case studies and activities, author Emily C. Bouck offers an unbiased depiction of the advantages and limitations of technology. Readers are exposed to a full range of assistive technology including up-to-date coverage of low- and high-technology, as well as free and for-purchase options that can be used to support students with disabilities.

A problem-solution guide to encounter various NLP tasks utilizing Java open source

libraries and cloud-based solutions
Key Features
Perform simple-to-complex NLP text processing tasks using modern Java libraries
Extract relationships between different text complexities using a problem-solution approach
Utilize cloud-based APIs to perform machine translation operations

Book Description
Natural Language Processing (NLP) has become one of the prime technologies for processing very large amounts of unstructured data from disparate information sources. This book includes a wide set of recipes and quick methods that solve challenges in text syntax, semantics, and speech tasks. At the beginning of the book, you'll learn important NLP techniques, such as identifying parts of speech, tagging words, and analyzing word semantics. You will learn how to perform lexical analysis and use machine learning techniques to speed up NLP operations. With independent recipes, you will explore techniques for customizing your existing NLP engines/models using Java libraries such as OpenNLP and the Stanford NLP library. You will also learn how to use NLP processing features from cloud-based sources, including Google and Amazon's AWS. You will master core tasks, such as stemming, lemmatization, part-of-speech tagging, and

named entity recognition. You will also learn about sentiment analysis, semantic text similarity, language identification, machine translation, and text summarization. By the end of this book, you will be ready to become a professional NLP expert using a problem-solution approach to analyze any sort of text, sentences, or semantic words. What you will learn

Explore how to use tokenizers in NLP processing Implement NLP techniques in machine learning and deep learning applications Identify sentences within the text and learn how to train specialized NER models Learn how to classify documents and perform sentiment analysis Find semantic similarities between text elements and extract text from a variety of sources Preprocess text from a variety of data sources Learn how to identify and translate languages

Who this book is for This book is for data scientists, NLP engineers, and machine learning developers who want to perform their work on linguistic applications faster with the use of popular libraries on JVM machines. This book will help you build real-world NLP applications using a recipe-based approach. Prior knowledge of Natural Language Processing basics and Java programming is expected.
