The objects of the study was to evaluate a test kit for the determination of the freezing point of antifreeze solutions in the field. The kit consists of a plastic strip 3-1/4 inch by 1/4 inch with a dry reagent pad 1/4-inch square attached to one end. The reagent pad is chemically impregnated so that it changes color when dipped into various concentrations of ethylene glycol. The kit was tested in the laboratory with various antifreeze solutions. It was also tested on the antifreeze in approximately 90 military vehicles.

Chemistry: Principles and Reactions

*Solutions of ethylene glycol are being considered as heat-transfer media for radiators in manned space capsules. This report was prepared to summarize the available corrosion data on uninhibited and inhibited ethylene glycol solutions. Much of the corrosion data are based on automotive and diesel engine coolant systems. Several factors considered are: time dependence, effect of pH, concentration, temperature, aeration, chloride ion, velocity, heat-transfer rate, and galvanic couples. Inhibitors for which corrosion data are presented include: borax, sodium benzoate, sodium nitrite, triethanolamine, Sodium mercaptobenzothiazole, soluble oil, chromates, as well as miscellaneous inhibitors. A number of patented inhibitors based on borax are discussed. Descriptions of test procedures including automobile service tests are presented.*
