*LARGE PRINT EDITION! More at LargePrintLiberty.com. Walter Block has been writing on the economics of discrimination - and in defense of discrimination, rightly understood - for more than 30 years. This large hardcover collects nearly all of this writing to present a radical alternative to the mainstream view. His thesis is that discrimination -- choosing one thing over another -- is an inevitable feature of the material world where scarcity of goods and time is the pervasive feature. There is no getting around it. You must discriminate, and therefore you must have the freedom to discriminate, which only means the freedom to choose. Without discrimination, there is no economizing taking place. It is chaos. The market embeds institutions that assist people in making the wisest possible choices given the alternatives. In this sense, discrimination is rational and socially optimal. For the state to presume to criminalize it based on social and political priorities amounts to a subversion of the market and of human liberty that leads to social conflict. The empirical detail in this work is as rigorous as the argument is radical. What politics regards as a dangerous inequality, Block regards as perfectly rational given existing realities. In essence, Block's book is a specialized application of the libertarian perspective on society, as applied to a particular*

*controversy in our times. It is supremely rare in tackling this issue head on, and offering a no-compromise alternative: abolish all anti-discrimination law on grounds that it makes no economic sense and only generates conflict where none need exist. Will this book cause controversy? Most assuredly. But that it is not its goal. Its goal is the uprooting of a flawed and failed social theory and its replacement by a realistic one that is rooted in a genuine concern for human rights and the good of all.*

*In this paradigm-shattering book, leading behavioural economist and food psychologist Brian Wansink - dubbed the 'Sherlock Holmes of food' and the 'wizard of why' - offers a radical new philosophy for weight loss. The answer isn't to tell people what to do: it's to set up their living environments so that they will naturally lose weight. Using cutting-edge, never-before-seen research from his acclaimed Food and Brand Lab at Cornell University, Wansink reveals how innovative and inexpensive design changes - from home kitchens to restaurants, from grocery stores to schools and workplaces - can make it mindlessly easy for people to eat healthier and make it more profitable for the companies who sell the food. In *Slim by Design*, Wansink argues that the easiest, quickest and most natural way to reverse weight gain is to work with human nature, not against it. He demonstrates how schools can nudge kids to take an apple instead of a cookie, how restaurants can increase profits by selling half-size portions, how supermarkets can double the*

With little skill, surprisingly few ingredients, and even the most unsophisticated of ice-cream makers, you can make the scrumptious ice creams that have made Ben & Jerry's an American legend. Ben & Jerry's Homemade Ice Cream & Dessert Book tells fans the story behind the company and the two men who built it—from their first meeting in 7th-grade gym class (they were already the two widest kids on the field) to their "graduation" from a \$5.00 ice-cream-making correspondence course to their first ice-cream shop in a renovated gas station. But the best part comes next. Dastardly Mash, featuring nuts, raisins, and hunks of chocolate. The celebrated Heath Bar Crunch. New York Super Fudge Chunk. Oreo Mint. and cookies, and recipes for sorbets, sundaes, and baked goods. The mathematician and logician Kurt Gödel (1906-1978) wrote some 280 letters to his mother Marianne and brother Rudolf from 1940, the year he arrived in America to take up what would become a permanent position at the Institute for Advanced Study in Princeton, New Jersey, until 1975, three years before his death. These letters constitute not only a unique source of biographical details of Gödel's life during this time, but are the most direct and intimate record of the innermost thoughts, personality and character, philosophical and political views, interests, and obsessions, of the brilliant thinker whose Incompleteness Theorems shook the mathematical world when he announced his groundbreaking result in 1930, at age 24. The first complete English translation of these letters, *Ever Your Kurt* --a companion volume to editor Stephen Budiansky's highly acclaimed new biography of Gödel, *Journey to the Edge of Reason* (Norton and Oxford, 2021)--will be of interest to all who share a fascination with one of the most original and enigmatic minds of the twentieth century.

Frank Lloyd Wright's foray into affordable housing--the American System-Built Homes--is frequently overlooked. When Nicholas and Angela Hayes became stewards of one of them, they began to unearth evidence that revealed a one-hundred-year-old fiasco fueled by competing ambitions and conflicting visions that eventually gave way to Wright's most creative period.

buying a refrigerator, making sure house is suitable and handling "no-cool" situations. The book can help you avoid mistakes I see every day as a refrigerator repair technician. It is the result of years of experience repairing and seeing the same mistakes in installation, purchasing and care day-after-day. Many of these mistakes result in service calls, which cost you, the consumer, directly or indirectly. My belief is that over the life of the refrigerator you will save a lot more than the cost of this book if you use the information it contains.

Tracing the course of the history of cooking and dining in McLean County and the Bloomington-Normal area takes us back 180 years. Early settlers from the Southern states and parts of the Northeast brought with them divergent tastes, but irrespective of their culinary leanings they generally made do with foods they either raised or collected themselves. Later on, newcomers from Ireland and Continental Europe established homes in various parts of the county. As a result, area foodways increased in complexity, and a variety of new food-related industries developed. Residents made beer, candy, ice cream, pickles, sausages, soda water, and vinegar. They manufactured stoves and refrigerators, milled flour, baked various types of bread, packed pork, and canned tomatoes. Bloomington companies distributed produce and groceries throughout Central Illinois. Still, many families beyond the city limits produced and processed nearly everything they ate and only occasionally visited a grocery store. By the end of the second millennium it was hard to find locally produced food in McLean County, let alone people with

many food-related skills. The area's telephone directories listed no cheese shops or fishmongers. Skilled butchers and bread bakers barely existed. A couple of artisanal confectioners still had shops in Bloomington, but you could forget it if you wanted to buy milk from a local dairy. Finding groceries and fresh produce outside of a chain supermarket was a challenge, not to mention locating a chef-owned restaurant.
