our newly emerging understanding that our bones are highly dynamic, very responsive to hormonal balance and fully integrated into our endocrine systems. The book explains what steps we can take to avoid osteoporosis, or if it has already taken hold, what steps and treatments are available to remediate or control the advance of this insidious disease. As we age, most women and over one-third of men lose bone density to some degree, because the new bone deposition fails to quite keep up with osteoclastic bone removal. For a majority of women past menopause, the dynamic balance of new bone deposition and bone removal shifts significantly enough to place them at heightened risk for bone fractures. Osteoporosis is fairly subtle in its onset, but it has a huge
